Expressive Therapies Continuum is distinctive in its application as a foundational theory in the field of art therapy. First developed by Vija Lusebrink, this theory can be used by persons of any theoretical orientation, and has the ability to unite art therapists of varying backgrounds. The information contained in this book demonstrates how the *Expressive Therapies Continuum* provides a framework for the organization of assessment information, the formulation of treatment goals, and the planning of art therapy interventions. It provides rich clinical detail and many case examples that enliven the text and promote student engagement and learning. Hinz divides material into three parts. The first describes the historical roots of the *Expressive Therapies Continuum* and pays homage to contributions from the fields of art and psychology. The seven component parts of the ETC are examined in the second part, and the last part of the book is dedicated to assessment and clinical applications. Each passing year bears witness to the development of ever more powerful computers, increasingly fast and cheap storage media, and even higher bandwidth data connections. This makes it easy to believe that we can now – at least in principle – solve any problem we are faced with so long as we only have enough data. Yet this is not the case. Although large databases allow us to retrieve many different single pieces of information and to compute simple aggregations, general patterns and regularities often go undetected. Furthermore, it is exactly these patterns, regularities and trends that are often most valuable. To avoid the danger of “drowning in information, but starving for knowledge” the branch of research known as data analysis has emerged, and a considerable number of methods and software tools have been developed. However, it is not these tools alone but the intelligent application of human intuition in combination with computational power, of sound background knowledge with computer-aided modeling, and of critical reflection with convenient automatic model construction, that results in successful intelligent data analysis projects. Guide to Intelligent Data Analysis provides a hands-on instructional approach to many basic data analysis techniques, and explains how these are used to solve data analysis problems. Topics and features: guides the reader through the process of data analysis, following the interdependent steps of project

understanding, data understanding, data preparation, modeling, and deployment and monitoring; equips the reader with the necessary information in order to obtain hands-on experience of the topics under discussion; provides a review of the basics of classical statistics that support and justify many data analysis methods, and a glossary of statistical terms; includes numerous examples using R and KNIME, together with appendices introducing the open source software; integrates illustrations and case-study-style examples to support pedagogical exposition. This practical and systematic textbook/reference for graduate and advanced undergraduate students is also essential reading for all professionals who face data analysis problems. Moreover, it is a book to be used following one's exploration of it. Dr. Michael R. Berthold is Nycomed-Professor of Bioinformatics and Information Mining at the University of Konstanz, Germany. Dr. Christian Borgelt is Principal Researcher at the Intelligent Data Analysis and Graphical Models Research Unit of the European Centre for Soft Computing, Spain. Dr. Frank Höppner is Professor of Information Systems at Ostfalia University of Applied Sciences, Germany. Dr. Frank Klawonn is a Professor in the Department of Computer Science and Head of the Data Analysis and Pattern Recognition Laboratory at Ostfalia University of Applied Sciences, Germany. He is also Head of the Bioinformatics and Statistics group at the Helmholtz Centre for Infection Research, Braunschweig, Germany.

A bull's-eye of a short fiction collection that spans the master's career. In 1950, fresh out of college and keen to make his name as a writer, Elmore Leonard decided he needed to pick a market, a big one, which would give him a better chance to be published while he learned to write. In choosing between crime and Westerns, the latter had an irresistible pull - Leonard loved movies set in the West. As he researched deeper into settings, Arizona in the 1880s captured his imagination: the Spanish influence, the stand-offs and shoot-outs between Apache Indians and the US cavalry. This is a fantastic collection of over five decades' worth of stories.
