Here, adequately presented for the first time in English, is the fascinating story of a splendid culture that flourished thirty-five hundred years ago in the empire on the Nile: kings and conquests, gods and heroes, beautiful art, sculpture, poetry, architecture. Significant archeological discoveries are constantly being made in Egypt. In this revision Professor Steele has rewritten whole chapters on the basis of these new finds and offers several new

conclusions to age-old problems.

What have we learnt about the Nile since the mid-1970s, the moment when Julian Rzóska decided that the time had come to publish a comprehensive volume about the biology, and the geological and cultural history of that great river? And what changes have meanwhile occurred in the basin? The human population has more than doubled, especially in Egypt, but also in East Africa. Locally, industrial development has taken place, and the Aswan High Dam was clearly not the last major infrastructure work that was carried out. More dams have been built, and some

water diversions, like the Toshka lakes, have created new expanses of water in the middle of the Sahara desert. What are the effects of all this on the ecology and economy of the Basin? That is what the present book sets out to explore, 33 years after the publication of "The Nile: Biology of an Ancient River". Thirty-seven authors have taken up the challenge, and have written the "new" book. They come from 13 different countries, and 15 among them represent the largest Nilotic states (Egypt, Sudan, Ethiopia, Uganda, and Kenya). Julian Rzóska died in 1984, and most of the authors of his book have now either disappeared or retired from research. Only Jack Talling and Samir Ghabbour were still

available to participate again.

The waters of the Nile are fundamental to life in Egypt. In this compelling ethnography, Jessica Barnes explores the everyday politics of water: a politics anchored in the mundane yet vital acts of blocking, releasing, channeling, and diverting water. She examines the quotidian practices of farmers, government engineers, and international donors as they interact with the waters of the Nile flowing into and through Egypt. Situating these local practices in relation to broader processes that affect Nile waters, Barnes moves back and forth from farmer to government ministry, from irrigation canal to international water conference. By showing how the waters of the Nile are constantly made and remade as a resource by people in and outside Egypt, she demonstrates the range of

political dynamics, social relations, and technological interventions that must be incorporated into understandings of water and its management.

Story Of The World #1 Ancient Times Revised Taylor & Francis

Protected on two sides by wide deserts and on another by the sea, the narrow strip of land watered and fertilized by the Nile was an ideal location for the development of the great civilization of Egypt. From its beginnings below the first cataract of the Nile to its long and legendary magnificence at the Nile Delta, ancient Egypt grew ever more prosperous and powerful, first as two kingdoms, then as one. A Short History of Ancient Egypt provides a concise, authoritative, and richly illustrated overview of ancient Egypt from its rise from the marshes to its submission to Rome. T. G. H. James describes how, in about 3100 B.C., the Egyptians first forged a unified administration and established a dynasty of kings. He follows the development of Egypt's greatest achievements: the organization of a national irrigation system, learning to write, and the construction of cities and tombs out of

mud brick. As their art became more distinctive and expressive and their beliefs were shaped into religion, Greek philosophers came to Egypt to study. Tourists came to gape. At first, James explains, the chief adversaries of Egyptians were themselves. Civil strife could arise from floods or famines, or from ambitious factions of the royal family. But in time, the bounty of Egyptian agriculture, the grandeur of Egyptian art and buildings, and the ostentation of Egyptian wealth excited the envy and aggression of other nations. Although Egypt fought to retain its independence, it succumbed at last under the conquests of Persia, Greece, and Rome.

The discipline of Egyptology has been criticised for being too insular, with little awareness of the development of archaeologies elsewhere. It has remained theoretically underdeveloped. For example

the role of Ancient Egypt within Africa has rarely been considered jointly by Egyptologists and Africanists. Egypt's own view of itself has been neglected; views of it in the ancient past, in more recent times and today have remained underexposed. Encounters with Ancient Egypt is a series of eight books which addresses these issues. The books interrelate, inform and illuminate one another and will appeal to a wide market including academics, students and the general public interested in Archaeology, Egyptology, Anthropology, Architecture, Design and History. Geographically, Egypt is clearly on the African continent, yet Ancient Egypt is routinely regarded as a non-African cultural form. The significance of Ancient Egypt for the rest of Africa is a hotly debated issue with complex ramifications. This book considers how Ancient Egypt was dislocated from Africa, drawing on a wide range of sources. It examines key issues such as the evidence for actual contacts between Egypt and other early African cultures, and how influential, or not, Egypt was on them. Some scholars argue that to its north Egypt's influence on Mediterranean civilization was downplayed

by western scholarship. Further afield, on the African continent perceptions of Ancient Egypt were coloured by biblical sources, emphasizing the persecution of the Israelites. An extensive selection of fresh insights are provided, several focusing on cultural interactions between Egypt and Nubia from 1000 BCE to 500 CE, developing a nuanced picture of these interactions and describing the limitations of an 'Egyptological' approach to them.

**When Egypt Ruled the East** Harvard University Press

A “highly enjoyable” account of six men, and one woman, who journeyed into uncharted and treacherous African terrain to find the source of the White Nile (The Washington Post). Nothing obsessed explorers of the mid-nineteenth century more than the quest to discover the source of the White Nile. It was the planet’s most elusive secret, the prize coveted above all others. Between 1856 and 1876, six larger-than-life men and one extraordinary woman accepted the challenge. Showing extreme courage and resilience, Richard Burton, John Hanning Speke, James Augustus Grant, Samuel Baker, Florence von Sass, David

Livingstone, and Henry Morton Stanley risked their lives and reputations in the fierce competition. National Book Critics Circle Award-winning author Tim Jeal deploys fascinating new research to provide a vivid tableau of the unmapped “Dark Continent,” its jungle deprivations, and the courage—as well as malicious tactics—of the explorers. On multiple forays launched into east and central Africa, the travelers passed through almost impenetrable terrain and suffered the ravages of flesh-eating ulcers, paralysis, malaria, deep spear wounds, and even death. They discovered Lakes Tanganyika and Victoria and became the first white people to encounter the kingdoms of Buganda and Bunyoro. Jeal weaves the story with authentic new detail—and examines the tragic unintended legacy of the Nile search that still casts a long shadow over the people of Uganda and Sudan. “A fabulous story...old-fashioned epic adventure.”—The Sunday Times “Superb narrative...a must-read for anyone hoping to understand the internal dynamics of modern state-building in central Africa.”—Booklist

 This multidisciplinary book by the author  
 of *The Geology of Egypt* is the result of  
 many years of research. It attempts to  
 reconstruct the history of the River Nile  
 from its origins to its present shape and  
 regimen and also to ascertain the amount  
 of water which has been carried by the  
 river during the course of its history. It  
 examines the manner in which this water  
 was utilized in the past and the ways in  
 which it will have to be used in future if  
 the inhabitants of the river basin are to  
 cope with their anticipated needs. Part  
 One traces the geological history of the  
 Nile from the time it started to excavate  
 its valley some six million years ago until  
 the present shape was assumed during  
 the wet period which affected Africa after  
 the retreat of the ice of the last glacial age  
 some 10,000 years ago. Part Two deals  
 with the amount of water that the river  
 and its tributaries carry at present and

have carried in the past. Part Three discusses the utilization of the water of the Nile from the time of the first appearance of man in the valley until the present time. It traces man's attempt to harness the river from the earliest time to the building of the Aswan High Dam. The book evaluates the effects of the dam after twenty years of operation. Part Four covers the present water supply-demand balance in each basin state and discusses the future plans of these countries to use the waters of the Nile. The rapidly growing populations and the prolonged droughts of recent years have put pressure upon the available waters of the river.

A lively collection of fun and challenging problems in ancient Egyptian math The mathematics of ancient Egypt was fundamentally different from our math today. Contrary to what people might think, it wasn't a primitive forerunner of modern mathematics. In fact, it can't be

understood using our current computational methods. Count Like an Egyptian provides a fun, hands-on introduction to the intuitive and often-surprising art of ancient Egyptian math. David Reimer guides you step-by-step through addition, subtraction, multiplication, and more. He even shows you how fractions and decimals may have been calculated—they technically didn't exist in the land of the pharaohs. You'll be counting like an Egyptian in no time, and along the way you'll learn firsthand how mathematics is an expression of the culture that uses it, and why there's more to math than rote memorization and bewildering abstraction. Reimer takes you on a lively and entertaining tour of the ancient Egyptian world, providing rich historical details and amusing anecdotes as he presents a host of mathematical problems drawn from different eras of the Egyptian past. Each of these problems is like a tantalizing puzzle, often with a beautiful and elegant solution. As you solve them, you'll be immersed in many facets of Egyptian life, from hieroglyphs and pyramid building to agriculture, religion, and even bread baking and beer

brewing. Fully illustrated in color throughout, Count Like an Egyptian also teaches you some Babylonian computation—the precursor to our modern system—and compares ancient Egyptian mathematics to today's math, letting you decide for yourself which is better. Ralph Masiello's Ancient Egypt Drawing Book Cotsen Institute of Archaeology Press The Nile Basin contains a record of human activities spanning the last million years. However, the interactions between prehistoric humans and environmental changes in this area are complex and often poorly understood. This comprehensive book explains in clear, non-technical terms how prehistoric environments can be reconstructed, with examples drawn from every part of the Nile Basin. Adopting a source-to-sink approach, the book integrates events in the Nile headwaters with the record from marine sediment cores in the Nile Delta and offshore. It provides a detailed record of past environmental changes throughout the Nile Basin and concludes with a review of the causes and consequences of plant and animal domestication in this region and of the various prehistoric migrations

out of Africa into Eurasia and beyond. A comprehensive overview, this book is ideal for researchers in geomorphology, climatology and archaeology.

This fully revised and updated third edition of the bestselling *Ancient Egypt* seeks to identify what gave ancient Egypt its distinctive and enduring characteristics, ranging across material culture, the mindset of its people, and social and economic factors. In this volume, Barry J. Kemp identifies the ideas by which the Egyptians organized their experience of the world and explains how they maintained a uniform style in their art and architecture across three thousand years, whilst accommodating substantial changes in outlook. The underlying aim is to relate ancient Egypt to the broader mainstream of our understanding of how all human societies function. Source material is taken from ancient written documents, while the book also highlights the contribution that archaeology makes to our understanding of Egyptian culture and society. It uses numerous case studies, illustrating them with artwork expressly prepared from

specialist sources. Broad ranging yet impressively detailed, the book is an indispensable text for all students of ancient Egypt and for the general reader.

The last quarter century has seen extensive research on the ports of the Red Sea coast of Egypt, the road systems connecting them to the Nile, and the mines and quarries in the region. Missing has been a systematic study of the peoples of the Eastern Desert--the area

between the Red Sea and the Nile Valley-- in whose territories these ports, roads, mines, and quarries were located. The historical overview of the Eastern Desert in the shape of a roughly chronological narrative presented in this book fills that gap. The multidisciplinary perspective focuses on the long-term history of the region. The extensive range of topics addressed includes specific historical periods, natural resources, nomadic survival strategies, ancient textual data, and the interaction between Christian hermits and their neighbors. The breadth of perspective does not sacrifice depth, for all authors deal in some detail with the specifics of their subject matter. As a whole, this collection provides an outline of the history and sociology of the Eastern Desert unparalleled in any language for its comprehensiveness. As such, it will be the essential starting point for future research on the Eastern Desert. Includes a CD of eleven audio files with music of the Ababda Nomads, and six short videos of

Ababda culture.

“Magisterial . . . [A] rich portrait of ancient Egypt’s complex evolution over the course of three millennia.”—Los Angeles Times  
NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post • Publishers Weekly  
In this landmark volume, one of the world’s most renowned Egyptologists tells the epic story of this great civilization, from its birth as the first nation-state to its absorption into the Roman Empire.

Drawing upon forty years of archaeological research, award-winning scholar Toby Wilkinson takes us inside a tribal society with a pre-monetary economy and decadent, divine kings who ruled with all-

too-recognizable human emotions. Here are the legendary leaders: Akhenaten, the “heretic king,” who with his wife Nefertiti brought about a revolution with a bold new religion; Tutankhamun, whose dazzling tomb would remain hidden for three millennia; and eleven pharaohs called Ramesses, the last of whom presided over the militarism, lawlessness, and corruption that caused a political and societal decline. Filled with new information and unique interpretations, *The Rise and Fall of Ancient Egypt* is a riveting and revelatory work of wild drama, bold spectacle, unforgettable characters, and sweeping history. “With a literary flair and a sense for a story well told, Mr. Wilkinson offers a highly readable, factually up-to-date account.”—The Wall Street Journal  
“[Wilkinson] writes with considerable verve. . . . [He] is nimble at conveying the sumptuous pageantry and cultural sophistication of pharaonic Egypt.”—The New York Times
