From marvelous galleries of the Big Dipper, Little Dipper and other constellations to in-depth looks at Mercury, Venus, Earth, Mars, Saturn, Uranus, and Neptune and to the moons of Jupiter, comets, and galaxies--not to mention entries on rockets and spacecraft--DK's Pocket Genius: Space opens up the

vast and mysterious expanse of space. What is a nebula? Why does an eclipse occur? How does a telescope work? Featuring more than 170 planets, stars, rockets, and rovers, Pocket Genius: Space answers the questions young readers want to know. Catalog entries include facts provided at-a-glance information, while locator icons offer immediately recognizable references to aid navigation and understanding, and fact files round off the ebook with fun facts such as record breakers and timelines. Each mini-encyclopedia is filled with facts on subjects ranging from animals to history,

cars to dogs, and Earth to space and combines a child-friendly layout with engaging photography and bite-size chunks of text that will encourage and inform even the most reluctant readers. **Greek Literary Criticism** Profile Books Covering the full range of nursing interventions, Nursing Interventions Classification (NIC), 6th Edition provides a research-based clinical tool to help in selecting appropriate interventions. It standardizes and defines the knowledge base for nursing practice while effectively communicating the nature of nursing. More than 550 nursing interventions are

provided — including 23 NEW labels. As the only comprehensive taxonomy of nursing-sensitive interventions available, this book is ideal for practicing nurses, nursing students, nursing administrators, and faculty seeking to enhance nursing curricula and improve nursing care. More than 550 research-based nursing intervention labels with nearly 13,000 specific activities Definition, list of activities, publication facts line, and background readings provided for each intervention. NIC Interventions Linked to 2012-2014 NANDA-I Diagnoses promotes clinical decision-making. New! Two-color design provides easy readability. 554 research-based nursing intervention labels with nearly 13,000 specific activities. NEW! 23 additional interventions include: Central Venous Access Device Management, Commendation, Healing Touch, Dementia Management: Wandering, Life Skills Enhancement, Diet Staging: Weight Loss Surgery, Stem Cell Infusion and many more. NEW! 133 revised interventions are provided for 49 specialties, including five new specialty core interventions. NEW! Updated list of estimated time and educational level has

been expanded to cover every intervention included in the text.

Wastewater Characteristics, Treatment and Disposal is the first volume in the series Biological Wastewater Treatment, presenting an integrated view of water quality and wastewater treatment. The book covers the following topics: wastewater characteristics (flow and major constituents) impact of wastewater discharges to rivers and lakes overview of wastewater treatment systems complementary items in planning studies. This book, with its clear and practical approach, lays the foundations for the topics that are analysed in more detail in the other books of the series. About the series: The series is based on a highly acclaimed set of best selling textbooks. This international version is comprised by

six textbooks giving a state-of-the-art presentation of the science and technology of biological wastewater treatment. Other titles in the series are: Volume 2: Basic Principles of Wastewater Treatment; Volume 3: Waste Stabilisation Ponds; Volume 4: Anaerobic Reactors; Volume 5: Activated Sludge and Aerobic Biofilm Reactors; Volume 6: Sludge Treatment and Disposal

The Sociology of Law Yale University Press 'Before the current global era it is impossible to imagine that comparable events [like September 11] could have occurred, reflecting as they do our new-found interdependence. The rise of global terrorism, like world-wide networks involving in money-laundering, drug-running and other forums of organised crime, are all parts of the dark side of globalisation.' From the new Preface This book is based on the highly influential BBC Reith lecture series on globalisation delivered in 1999 by Anthony Giddens. Now updated with a new chapter addressing the post-September 11th global landscape, this book remains the intellectual benchmark on how globalisation is reshaping our lives. The changes are explored in five main chapters: * Globalisation * Risk * Tradition * Family * Democracy. *Adoption and impact of OER in the Global South* SAGE Refugees from the violence of wars and

the brutality of famished lives have knocked on other people's doors since the beginning of time. For the people behind the doors, these uninvited guests were always strangers, and strangers tend to generate fear and anxiety precisely because they are unknown. Today we find ourselves confronted with an extreme form of this historical dynamic, as our TV screens and newspapers are filled with accounts of a 'migration crisis', ostensibly overwhelming Europe and portending the collapse of our way of life. This anxious debate has given rise to a veritable 'moral panic' - a feeling of fear spreading among a large number of people that some evil threatens the well-being of society. In this short book Zygmunt Bauman analyses the origins, contours and impact of this moral panic - he dissects, in short, the present-day migration panic. He shows how politicians have exploited fears and anxieties that have become widespread, especially among those who have already lost so much - the disinherited and the poor. But he argues that the policy of mutual separation, of building walls rather than bridges, is misguided. It may bring some short-term reassurance but it is

doomed to fail in the long run. We are faced with a crisis of humanity, and the only exit from this crisis is to recognize our growing interdependence as a species and to find new ways to live together in solidarity and cooperation, amidst strangers who may hold opinions and preferences different from our own. **CD-ROM.** Franklin Classics Runaway WorldProfile Books **Chronicles of a Liquid Society** Oxford University Press, USA A scientist friend asked Bruno Latour point-blank: "Do you believe in reality?" Taken aback by this strange query, Latour offers his meticulous response in Pandora's Hope. It is a remarkable argument for understanding the reality of science in practical terms. In this book, Latour, identified by Richard Rorty as the new "bête noire of the science worshippers," gives us his most philosophically informed book since Science in Action. Through case studies of scientists in the Amazon analyzing soil and in Pasteur's lab studying the fermentation of lactic acid, he shows us the myriad steps by which events in the material world are transformed into items of

scientific knowledge. Through many examples in the world of technology, we see how the material and human worlds come together and are reciprocally transformed in this process. Why, Latour asks, did the idea of an independent reality, free of human interaction, emerge in the first place? His answer to this question, harking back to the debates between Might and Right narrated by Plato, points to the real stakes in the so-called science wars: the perplexed submission of ordinary people before the warring forces of claimants to the ultimate truth.

The definitive presentation of Soar, one AI's most enduring architectures, offering comprehensive descriptions of fundamental aspects and new components. In development for thirty years, Soar is a general cognitive architecture that integrates knowledge-intensive reasoning, reactive execution, hierarchical reasoning, planning, and learning from experience, with the goal of creating a general computational system that has the same cognitive abilities as

humans. In contrast, most AI systems are designed to solve only one type of problem, such as playing chess, searching the Internet, or scheduling aircraft departures. Soar is both a software system for agent development and a theory of what computational structures are necessary to support human-level agents. Over the years, both software system and theory have evolved. This book offers the definitive presentation of Soar from theoretical and practical perspectives, providing comprehensive descriptions of fundamental aspects and new components. The current version of Soar features major extensions, adding reinforcement learning, semantic memory, episodic memory, mental imagery, and an appraisal-based model of emotion. This book describes details of Soar's component memories and processes and offers demonstrations of individual components, components working in combination, and real-world applications. Beyond these functional considerations, the book also proposes requirements for general cognitive architectures and explicitly evaluates how well Soar meets those requirements.

In 1550 the German adventurer Hans Staden was serving as a gunner in a Portuguese fort on the Brazilian coast. While out hunting, he was captured by the Tupinambá, an indigenous people who had a reputation for engaging in ritual cannibalism and who, as allies of the French, were hostile to the Portuguese. Staden's True History, first published in Germany in 1557, tells the story of his nine months among the Tupi Indians. It is a dramatic first-person account of his capture, captivity, and eventual escape. Staden's narrative is a foundational text in the history and European "discovery" of Brazil, the earliest European account of the Tupi Indians, and a touchstone in the debates on cannibalism. Yet the last English-language edition of Staden's True History was published in 1929. This new critical edition features a new translation from the sixteenth-century German along with annotations and an extensive introduction. It restores to the text the fifty-six woodcut illustrations of Staden's adventures and final escape that appeared in the original 1557 edition. In the introduction, Neil L. Whitehead discusses

the circumstances surrounding the production of Staden's narrative and its ethnological significance, paying particular attention to contemporary debates about cannibalism. Whitehead illuminates the value of Staden's True History as an eyewitness account of Tupi society on the eve before its collapse, of ritual war and sacrifice among Native peoples, and of colonial rivalries in the region of Rio de Janeiro. He chronicles the history of the various editions of Staden's narrative and their reception from 1557 until the present. Staden's work continues to engage a wide range of readers, not least within Brazil, where it has recently been the subject of two films and a graphic novel.

Psychological Explanations for Social Phenomena MIT Press

This brilliant and original book sets out to dismantle the idea that movements, crises and other phenomena produced in society must be explained by exclusively social causes, without recourse to psychological explanations. The author argues that we should reassess the significance of psychological causes in human affairs. Whilst psychological causes are undoubtedly distinct from social causes, all social phenomena are events or facts brought about by human beings: it is their passions which stimulate their great political, religious and cultural creations.

He discusses the work of Durkehim, Mauss, Weber and Simmel, and argues that only a productive interplay between psychology and sociology will do justice to the interdisciplinary character of their thought. Winner of the European Amalfi Prize for Sociology, The Invention of Sociology will be welcomed by students and researchers in sociology, social psychology, and the social sciences generally.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved

it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris. *Lessons of the Masters* Elsevier Health Sciences

In a hierarchy, every employee rises to the level of their own incompetence. This simple maxim, defined by this classic book over 40 years ago, has become a beacon of truth in the world of work. From the civil service to multinational companies to hospital management, it explains why things constantly go wrong: promotion up a hierarchy inevitably leads to over-promotion and incompetence. Through barbed anecdotes and wry humour the authors define the problem and show how anyone, whether at the top or bottom of the career ladder, can avoid its pitfalls. Or,

indeed, avoid promotion entirely!

What is the relationship between the social performance of companies and their financial performance? More colloquially, can a firm effectively attend to both people and profits as it conducts its business? This question has been investigated in no fewer than 95 empirical studies published since 1972. The authors have assembled a compendium of this research to give researchers and practitioners alike a broad overview of these 95 studies and a systematic database detailing the content of each one. This book provides a comprehensive portrait of this research literature. It begins with a broad orientation to the literature, exploring why the link between social and financial performance has been subject to continual inquiry and often heated debate. The authors then present an integrated overview of the 95 studies. Through the charts and tables, the authors illuminate the nature of the studies conducted; the data samples selected for investigation; the ways in which financial and social performance have been measured; and the overall tally of results.

How the way we hold knowledge about the past—in books, in file folders, in databases—affects the kind of stories we tell about the past. The way we record knowledge, and the web of technical, formal, and social practices that surrounds it, inevitably affects the knowledge that we record. The ways we hold knowledge

about the past—in handwritten manuscripts, in printed books, in file folders, in databases—shape the kind of stories we tell about that past. In this lively and erudite look at the relation of our information infrastructures to our information, Geoffrey Bowker examines how, over the past two hundred years, information technology has converged with the nature and production of scientific knowledge. His story weaves a path between the social and political work of creating an explicit, indexical memory for science—the making of

infrastructures—and the variety of ways we continually reconfigure, lose, and regain the past. At a time when memory is so cheap and its recording is so protean, Bowker reminds us of the centrality of what and how we choose to forget. In *Memory Practices in the Sciences* he looks at three "memory epochs" of the nineteenth, twentieth, and twenty-first centuries and their particular reconstructions and reconfigurations of scientific knowledge. The nineteenth century's central science, geology, mapped both the social and the natural

world into a single time package (despite apparent discontinuities), as, in a different way, did mid-twentieth-century cybernetics. Both, Bowker argues, packaged time in ways indexed by their information technologies to permit traffic between the social and natural worlds. Today's sciences of biodiversity, meanwhile, "database the world" in a way that excludes certain spaces, entities, and times. We use the tools of the present to look at the past, says Bowker; we project onto nature our modes of organizing our own affairs.
