Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic

Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

When Stanford M. Lyman authored *The Seven Deadly Sins: Society and Evil* in 1978 it was hailed by Alasdair MacIntyre as "a book of absorbing interest and importance...[that] places us all in

his debt." By Nelson Hart as "a masterful and thought-provoking book...[that] is the only scholarly treatment of sin that is so well-informed by the best of ancient through modern perspectives." By James A. Aho as a work whose "abstract hardly does justice to the scholarly and detailed analysis of sin." And by Harry Cohen as a "book...[that] stands as a beautiful illustration of what holistic, idiosyncratic, interdisciplinary, and creative thinking and writing can bring to bear on the age-old problem of society and evil." The American Sociological Association's section on the Sociology of the Emotions selected this book as one of the works that laid the foundations for the study of pride, lust, envy, and anger—basic sentiments embedded in the social process. For this revised and expanded edition Lyman has written a new chapter, "Sentiments, Sin, and Social Conflict: Toward a Sociology of the Emotions." The new edition will be a valuable work for courses in social psychology, ethics, deviance, and the sociology of morals and of religion.

This edited collection attempts to revive a unified anthropological approach to the study of sex and gender hierarchies. Seventeen distinguished contributors - from cultural anthropology, physical anthropology, archaeology, and anthropological linguistics - have produced a wealth of fascinating data on human and primate, ancient and contemporary, and 'primitive' and developed societies, covering topics such as mothering and child care, work, health, intrafamily relationships, and public power. The interdisciplinary approach successfully contributes to the development of better theory and methodology in anthropology.

A visually striking intercultural exploration of the use of mobile phones in Aboriginal communities in Australia. Yuta is the Yolngu word for new. Phone & Spear: A Yuta Anthropology is a project inspired by the gloriously cheeky and deeply meaningful audiovisual media made with and circulated by mobile phones by an extended Aboriginal family in northern Australia. Building on a ten-year collaboration by the community-based arts collective Miyarrka Media, the project is an experiment in the anthropology of co-creation. It is a multivoiced portrait of an Indigenous society using mobile phones inventively to affirm connections to kin and country amid the difficult and often devastating circumstances of contemporary remote Aboriginal life. But this is not simply a book about Aboriginal art, mobile phones, and social renewal. If old anthropology understood its task as revealing one world to another, yuta anthropology is concerned with bringing different worlds into relationship. Following Yolngu social aesthetics—or what Miyarrka Media translate as “the law of feeling”—the book is a relational technology in its own right: an object that combines color, pattern, and story to bring once distant worlds into new sensuously mediated connections.

The book provides a full complement of assessment technologies that enable leaders to measure and evaluate performance using qualitative and quantitative performance indicators and reference points in each of seven areas of organizational performance. While these technologies are not new, applying them in a

comprehensive assessment of the performance of both academic and administrative organization in higher education is a true innovation. *Assessing Organizational Performance in Higher Education* defines four types of assessment user groups, each of which has unique interest in organizational performance. This offers a new perspective on who uses performance results and why they use them. These varied groups emphasize that assessment results must be tailored to fit the needs of specific groups, that “one-size-fits-all” does not apply in assessment. An assessment process must be robust and capable of delivering the right information at the right time to the right user group.

An Anthropology of Landscape tells the fascinating story of a heathland landscape in south-west England and the way different individuals and groups engage with it. Based on a long-term anthropological study, the book emphasises four individual themes: embodied identities, the landscape as a sensuous material form that is acted upon and in turn acts on people, the landscape as contested, and its relation to emotion. The landscape is discussed in relation to these themes as both 'taskscape' and 'leisurescape', and from the perspective of different user groups. First, those who manage the landscape and use it for work: conservationists, environmentalists, archaeologists, the Royal Marines, and quarrying interests. Second, those who use it in their leisure time: cyclists and horse riders, model aircraft flyers, walkers, people who fish there, and

artists who are inspired by it. The book makes an innovative contribution to landscape studies and will appeal to all those interested in nature conservation, historic preservation, the politics of nature, the politics of identity, and an anthropology of Britain.

How do people learn and experience their culture? How do people make a living? What does it mean to be in a family? How do we make sense of peoples' beliefs and ritual practices? In exploring questions such as these, this cultural anthropology reader focuses on contemporary global concerns and includes a significant number of articles by authors from outside the United

States. A dynamic development in the fourth edition is the inclusion of "Anthropology and Public Debate" sections, in which opposing anthropological arguments on current hot topics are featured. In addition, "Doing Fieldwork" essays consider the nature and dilemmas of fieldwork, the changing status of the field, the nature of anthropological learning in the field, and ethical issues and dilemmas.

*How the World Changed Social Media* is the first book in *Why We Post*, a book series that investigates the findings of anthropologists who each spent 15 months living in communities across the world. This book offers a comparative analysis summarising the results of the research and explores the impact of social media on politics and gender, education and commerce. What is the result of the increased emphasis on visual communication? Are we becoming more individual or more social? Why is public social media so conservative? Why does equality online fail to shift inequality offline? How did memes become the moral police of the internet? Supported by an introduction to the project's academic framework and theoretical terms that help to account for the findings, the book argues that the only way to appreciate and understand something as intimate and ubiquitous as social media is to be immersed in the lives of the people who post. Only then can we discover how people all around the world have already transformed social media in such unexpected ways and assess the consequences
