Handbook of Applied Econometrics
Volume II: Microeconomics UMK PRESS
Halophytes are those plant species that can tolerate high salt concentrations. There are diversified species of halophytes suited for growth in various saline regions around the world, e.g. coastal saline soil, soils of mangrove forests, wetlands, marshlands, lands of arid and semiarid regions, and agricultural fields. These plants can be grown in soil and water containing high salt concentrations and unsuitable for conventional crops, and can be good sources of food, fuel, fodder, fiber, essential oils, and medicine. Moreover,

halophytes can be exploited as significant and major plant species for the desalination and restoration of saline soils, as well as phytoremediation. This book highlights recent advances in exploring the unique features of halophytes and their potential uses in our changing environment.

Social and Economic Dimensions of Carrageenan Seaweed Farming Springer Science & Business Media

This book is based on an FAO/NORAD meeting on the strategy for development of aquaculture as an industry and on the author's wide experience with FAO. After introducing the subject and its present organization, attention is given to the basic data required for aquaculture planning, the varying need of small-scale rural aquaculture and large-scale

industry. Other chapters cover auxiliary industries, manpower needs and training, research and information, manpower needs and training, research and information, investment decisions and financing, legal rights to sites and stocks, disease control and public health safeguards, conflicts in stocks, disease control and public health safeguards, conflicts in land and water use, pollution and other environmental problems. This useful treatise is amply illustrated to provide guidance in planning aquaculture development individually and nationally.

Mastering Research Methods National Academies Press

Geodesy is the science of accurately measuring and understanding three fundamental properties of Earth: its

geometric shape, its orientation in space, and its gravity field, as well as the changes of these properties with time. Over the past half century, the United States, in cooperation with international partners, has led the development of geodetic techniques and instrumentation. Geodetic observing systems provide a significant benefit to society in a wide array of military, research, civil, and commercial areas, including sea level change monitoring, autonomous navigation, tighter low flying routes for strategic aircraft, precision agriculture, civil surveying, earthquake monitoring, forest structural mapping and biomass estimation, and improved floodplain mapping. Recognizing the growing reliance of a wide range of scientific and societal

endeavors on infrastructure for precise geodesy, and recognizing geodetic infrastructure as a shared national resource, this book provides an independent assessment of the benefits provided by geodetic observations and networks, as well as a plan for the future development and support of the infrastructure needed to meet the demand for increasingly greater precision. Precise Geodetic Infrastructure makes a series of focused recommendations for upgrading and improving specific elements of the infrastructure, for enhancing the role of the United States in international geodetic services, for evaluating the requirements for a geodetic workforce for the coming decades, and for providing national coordination and

advocacy for the various agencies and organizations that contribute to the geodetic infrastructure.

Unauthorized Migration in Southeast Asia
Food & Agriculture Org.

Volume is indexed by Thomson Reuters CPCI-S (WoS). This collection of more than 204 peer-reviewed papers on Composite Science and Technology covers: mechanics of composites, infrastructural composites, non-destructive evaluation and characterization of composites, fracture and fatigue of composites, numerical and mathematical modelling, ceramic matrices, composites, metal-matrix composites, composite manufacturing, polymer composites, smart materials and structures, nano-composites, bio-composites and structural health

monitoring. This makes it a handy guide to the state-of-the-art of this field.

Proceedings of the 3rd International Halal Conference (INHAC 2016)

Penguin UK

This book contains selected papers which were presented at the 3rd International Halal Conference (INHAC 2016), organized by the Academy of Contemporary Islamic Studies (ACIS), Universiti Teknologi MARA (UiTM) Shah Alam, Malaysia. It addresses halal-related issues that are applicable to various industries and explores a variety of contemporary and emerging issues. Highlighting findings from both scientific and social research studies, it enhances the discussion on the halal industry (both in Malaysia and at the international level), and serves as an invitation to

engage in more advanced research on the global halal industry.

Malay Fishermen SAGE

This study is the result of an interest in the economic theory of production intermittently pursued during the past three years. Over this period I have received substantial support from the Office of Naval Research, first from a personal service consulting contract directly with the Mathematics Division of the Office of Naval Research and secondly from Project N6 onr-27009 at Princeton University under the direction of Professor Oskar Morgenstern. Grateful acknowledgement is made to the Office of Naval Research for this support and to Professor Morgenstern, in particular, for his interest in the publication of this research. The responsibility for errors

and omissions, however, rests entirely upon the author. Professor G. C. Evans has given in terms of a simple total cost function, depending solely upon output rate, a treatment of certain aspects of the economic theory of production which has inherent generality and convenience of formulation. The classical approach of expressing the technology of production by means of a production function is potentially less restrictive than the use of a simple total cost function, but it has not been applied in a more general form other than to derive the familiar conditions between marginal productivities of the factors of production and their market prices.

Pembangunan Komuniti di Malaysia dan Indonesia (UUM Press) Wiley
Who really creates wealth in our world?

And how do we decide the value of what they do? At the heart of today's financial and economic crisis is a problem hiding in plain sight. In modern capitalism, value-extraction - the siphoning off of profits, from shareholders' dividends to bankers' bonuses - is rewarded more highly than value-creation: the productive process that drives a healthy economy and society. We misidentify takers as makers, and have lost sight of what value really means. Once a central plank of economic thought, this concept of value - what it is, why it matters to us - is simply no longer discussed. Yet, argues Mariana Mazzucato in this penetrating and passionate new book, if we are to reform capitalism - to radically transform an increasingly sick system rather than continue feeding it - we

urgently need to rethink where wealth comes from. Who is creating it, who is extracting it, and who is destroying it? Answers to these questions are key if we want to replace the current parasitic system with a type of capitalism that is more sustainable, more symbiotic: that works for us all. The Value of Everything will reignite a long-needed debate about the kind of world we really want to live in.

Mangrove Ecosystems of Asia OECD Publishing

This Handbook focuses on specific microeconomics applications, rather than on conventional econometric theory. It covers the econometric issues involved in a variety of applied microeconomic problems.

Ethnicity & Electoral Politics in Sarawak

UN

Bringing the major current insights in implementation research and theory together, *Public Policy, Implementation and Governance* reviews the literature on public policy implementation, relating it to contemporary developments in thinking about governance. The text stresses the continuing importance of a focus upon implementation processes and explores its central relevance to the practice of public administration. In light of the changing nature of governance, Hill and Hupe suggest strategies for both future research on and management of public policy implementation. Their basic approach is two-fold: firstly, to understand the process of implementation and secondly, to address how one might control and

affect this process. Re-exploring the state of the art of the study of implementation as a sub-discipline of political science and public administration, this book will be essential reading for students and researchers in public policy, social policy, public management, public administration and governance. 'This is an excellent and much needed book. Hill and Hupe have provided a well written and highly accessible account of the development of implementation studies which will be immensely valuable to everyone concerned with understanding implementation in modern policy making.' - Professor Wayne Parsons, University of London
Tanjong Life CRC Press
This book describes initiatives and

concrete examples on sustainable food production worldwide. In the current world scenario, where nations all over the world are struggling to accomplish the United Nations Sustainable Development Goals and to ensure sustainable patterns for all, this book provides a contribution towards a more comprehensive and interdisciplinary understanding of the cross-cutting issues related to Sustainable Agriculture and Food Security. This interdisciplinary book supports the efforts to engage a commitment from all fields of science, to work together to provide knowledge that could help to address SDG2 (No hunger) and lead to the promotion of quality of life, by means of a more sustainable food production, and improved food security. This book is expected to fill the

gap of publications in this field. It gives a special emphasis to a state-of-the-art descriptions of approaches, methods, initiatives and projects from universities, stakeholders, organizations and civil society across the world, regarding cross-cutting issues in sustainable food production. It includes examples of policies and practices case studies, examples of projects, institutional policies, innovative methods and tools and research outputs, which highlight the interdependence between sustainable agriculture and food security issues. It is expected that the “Sustainable Agriculture and Food Security” will make the many benefits of sustainable food production clearer and, inter alia, lead to an increase in the emphasis provided to this central theme.

The Value of Everything Maritime Institute of Malaysia (MIMA)

The book provides an up-to-date account of mangrove forests from Asia, together with restoration techniques, and the management requirements of these ecosystems to ensure their sustainability and conservation. All aspects of mangroves and their conservation are critically re-examined. The book is divided into three sections presenting the distribution and status of mangrove ecosystems in Asia, the challenges they are facing, their issues and opportunities, and the management strategies for their conservation.

Implementing Public Policy Springer

This book follows on from the first volume, on protozoan and metazoan infections, of a three-volume series. It

focuses largely on finfish and considers non-infectious disorder of development, growth and physiology of wild and captive species. Various sections address topics such as tumourigenesis, stress physiology and the effects of stressors on particular processes, and the effect of environmental factors (including toxic substances) on fish health. The economic implications of non-infectious disorders in intensive aquaculture are of particular importance, and a chapter is devoted specifically to this. The final chapter describes evaluation methods for the assessment of disorders at the individual, population and community level. The book is indispensable for zoologists, veterinary scientists and those concerned with fisheries and aquaculture.

Special focus: Effects of the Anglo-Dutch Treaty of 1824 on Maritime Trade

Around the Straits of Malacca and

Nearby Region Description: This article is written with an aim to review and study the British strategies used during the colonisation of Malaya, which led to successful signing of several treaties that greatly benefitted the British East

India Company (EIC). The Anglo-Dutch Treaty of 1824 was among the treaties that had a huge impact not only on the British, but also the people of Malaysia and Singapore, where the benefits are still enjoyed to this day. In two years (2024), it will be the 200th anniversary of the treaty signed between the Dutch and British. After nearly two centuries, the British colonisation strategies in Singapore through the Anglo-Dutch Treaty of 1824 were found to have truly helped the development of the country, the Straits of Malacca, as well as the surrounding regions. Although there were a myriad of studies and writings that claimed that the British colonisation was intended for the expansion of ideological policies, as well as ensuring the economic interests of the British

only, in reality, the countries involved were able to reap the benefits as an effect of the colonisation. Content: - Editorial - From the Bridge - Special Focus: Effects of the Anglo-Dutch Treaty of 1824 on Maritime Trade Around the Straits of Malacca and Nearby Region (Sabirin Ja'afar) - Banning of Trawl Nets in Zone B: Status and Way Forward (Nurfatin Wahida Puspa, Nurul Ashikin Zakaria & Puteri Arlis Tsharina Jazlan 'Arif) - ICPC's Best Practices: A Brief Look into Submarine Cable Protection Law in Malaysia (Wahab Jumrah) - Way Forward for Malaysia Shipping Carbon Reporting: Fuel Oil Consumption Data Collection and Reporting for Ship of Less Than 5,000 Gross Tonnage (Egbert Adolf Naintin & Mohd Tarmizi Osman) - Special Interview: Dato' Cheah Kong Wai:

Longest Serving MIMA DG Scores Many Firsts During His Stay (Badrollhisham Bidin)

Malay annals Springer Nature

Carrageenan is a gelling agent extracted from red seaweeds and it has multiple applications in the food processing and other industries. Increasing demand for carrageenan has led to rapid expansion of carrageenan seaweed (primarily Kappaphycus and Eucheuma) farming in tropical areas. This expansion is expected to continue, but many issues need to be addressed to enable the sector to develop its full potential in contributing towards sustainable livelihoods, human development and social well-being. Including six country case studies and a global synthesis, this document provides a comprehensive

and balanced assessment of the economic, social and governance dimensions of carrageenan seaweed farming. Information and insights provided by this document should facilitate evidence-based decision-makings in both the public and private sectors.

The Asia-Pacific Springer

This is an update of the global seaweed market: production figures from culture and capture, the size of the international market for seaweed and its commercially important issues, the leading countries by region, developments in processing and utilization technology, and innovations in the industry, as well as the challenges and outlook for the industry. According to the report, the Asia and the Pacific

region is the largest seaweed market, followed by Europe and the Americas. Moreover, in 2015, total global seaweed production was 30.4 million tonnes, 29.4 million of which originated from the aquaculture sector.

Labour Force Statistics 1999 Oxford University Press, USA

The ultimate goal of crop production is to provide quality produce to consumers at reasonable rates. Most fresh produce is highly perishable, and postharvest losses are significant under the present methods of management in many countries. However, significant achievements have been made during the last few years to curtail postharvest losses in fr

Buku ini menilai kesan pembangunan

terhadap komuniti yang merangkumi peluang, isu dan masalah yang dihadapi oleh komuniti terpilih. Antara isu yang mendapat perhatian ialah pembangunan komuniti, praktis kerja sosial dengan komuniti, pemeraksanaan komuniti dan isu-isu semasa yang melibatkan komuniti. Buku yang membincangkan komuniti sebelum ini kebanyakannya hanya menumpukan isu pembangunan yang dijalankan terhadap komuniti itu sahaja. Namun demikian, buku ini lebih memberi tumpuan kepada aspek sumbangan bidang kerja sosial terhadap pembangunan komuniti. Golongan sasaran yang dikenal pasti juga merupakan antara tujuhan kelompok sasaran dalam bidang kerja sosial yang merangkumi kelompok minoriti, remaja, keluarga, Orang Kurang Upaya (OKU),

pelarian dan orang asli. Dalam masa yang sama, buku ini menekankan program komuniti yang boleh dijalankan dalam komuniti itu sendiri seperti Rukun Tetangga, projek libat sama, pendekatan kepelbagaian budaya dan program-program pemeriksaan terhadap remaja, keluarga dan OKU. Buku ini diharap dapat memperkaya ilmu dalam bidang sains sosial yang merangkumi bidang antropologi, sosiologi, kerja sosial, polisi dan pembangunan serta dapat menambah bahan rujukan kepada para pengkaji komuniti, pensyarah, pelajar institusi pengajian tinggi, pihak badan bukan kerajaan (NGO), pengamal kerja sosial dan pembuat polisi.

Fish Diseases and Disorders: Non-infectious disorders CABI

The social, political and economic impact

of the decline of the old colonial powers in Africa, India and the Middle East are still key areas of scholarly research and debate. Based on careful social observation and empirical research, the titles in *The Sociology of Development* set of the International Library of Sociology explore the tension between agriculture and industry in developing economies, and trace the complex political process of independence. Aimed at administrators and academics, these studies are central to Development Studies.
