2001: a Space Odyssey (Space Odyssey Saga #1). Grand Central Publishing
 Dream Story...is a sensual tale that explores the subconscious, forbidden desires of a husband and wife, in both their dreams and fantasies and their increasingly daring sexual adventures. Ahead of its time and marked by the deep influence of the author's contemporary, Sigmund Freud, Schnitzler's novel has become a modernist classic. In this volume the original story's themes of depravity and the elusive ambiguity of dream and reality can be compared to Kubrick's own transforming vision -- in the film that has become the culminating achievement of his career...

 2001: A Space Odyssey combines meticulous science, limitless imagination, and pure visual majesty. This compendium, previously available as a Collector's Edition, contains photographs, pre-production paintings, and conceptual designs that explore the genius behind the sci-fi classic that remains the benchmark for all cinema space epics.
2001: A Space Odyssey W. W. Norton & Company
 "If 2001 has stirred your emotions, your subconscious, your mythological yearnings, then it has succeeded."--Stanley Kubrick
 Stanley Kubrick's extraordinary movie 2001: A Space Odyssey was released in 1969. The critics initially disliked it, but the public loved it. And eventually, the film took its rightful place as one of the most innovative, brilliant, and pivotal works of modern cinema. The Making of 2001: A Space Odyssey consists of testimony from Kubrick's collaborators and commentary from critics and historians. This is the most complete book on the film to date--from Stanley Kubrick's first meeting with screenwriter

Arthur C. Clarke to Kubrick's exhaustive research to the actual shooting and release of the movie.

Rendezvous With Rama Roc

The Other Side of the Sky presents a glimpse of our future: a future where reality is no longer contained in earthly dimensions, where man has learned to exist with the knowledge that he is not alone in the universe. These stories of other planets and galactic adventures show Arthur C. Clarke at the peak of his powers: sometimes disturbing, always intriguing.

From the Arthur C. Clarke Award-winning Adrian Tchaikovsky, *The Doors of Eden* is an extraordinary feat of the imagination and a page-turning adventure about parallel universes and the monsters that they hide. They thought we were safe. They were wrong. Four years ago, two girls went looking for monsters on Bodmin Moor. Only one came back. Lee thought she'd lost Mal, but now she's miraculously returned. But what happened that day on the moors? And where has she been all this time? Mal's reappearance hasn't gone unnoticed by MI5 officers either, and Lee isn't the only one with questions. Julian Sabreur is investigating an attack on top physicist Kay Amal Khan. This leads Julian to clash with agents of an unknown power - and they may or may not be human. His only clue is grainy footage, showing a woman who supposedly died on Bodmin Moor. Dr Khan's research was theoretical; then she found cracks between our world and parallel Earths. Now these cracks are widening, revealing extraordinary creatures. And as the doors crash open, anything could come through. "Tchaikovsky weaves a masterful tale... a suspenseful joyride through the multiverse." (Booklist)

 How science consultants make movie science plausible, in films ranging from 2001: A Space Odyssey to Finding Nemo. Stanley

Kubrick's 2001: A Space Odyssey, released in 1968, is perhaps the most scientifically accurate film ever produced. The film presented such a plausible, realistic vision of space flight that many moon hoax proponents believe that Kubrick staged the 1969 moon landing using the same studios and techniques. Kubrick's scientific verisimilitude in 2001 came courtesy of his science consultants—including two former NASA scientists—and the more than sixty-five companies, research organizations, and government agencies that offered technical advice. Although most filmmakers don't consult experts as extensively as Kubrick did, films ranging from *A Beautiful Mind* and *Contact* to *Finding Nemo* and *The Hulk* have achieved some degree of scientific credibility because of science consultants. In *Lab Coats in Hollywood*, David Kirby examines the interaction of science and cinema: how science consultants make movie science plausible, how filmmakers negotiate scientific accuracy within production constraints, and how movies affect popular perceptions of science. Drawing on interviews and archival material, Kirby examines such science consulting tasks as fact checking and shaping visual iconography. Kirby finds that cinema can influence science as well: Depictions of science in popular films can promote research agendas, stimulate technological development, and even stir citizens into political action.

The definitive story of the making of 2001: A Space Odyssey, acclaimed today as one of the greatest films ever made, and of director Stanley Kubrick and writer Arthur C. Clarke—"a tremendous explication of a tremendous film...Breathtaking" (TheWashington Post). Fifty years ago a strikingly original film had its premiere. Still acclaimed as one of the most remarkable and important motion pictures ever made, 2001: A Space Odyssey depicted the first contacts between humanity and extraterrestrial

intelligence. The movie was the product of a singular collaboration between Stanley Kubrick and science fiction visionary Arthur C. Clarke. Fresh off the success of his cold war satire *Dr. Strangelove*, Kubrick wanted to make the first truly first-rate science fiction film. Drawing from Clarke's ideas and with one of the author's short stories as the initial inspiration, their bold vision benefited from pioneering special effects that still look extraordinary today, even in an age of computer-generated images. In *Space Odyssey*, author, artist, and award-winning filmmaker Michael Benson "delivers expert inside stuff" (San Francisco Chronicle) from his extensive research of Kubrick's and Clarke's archives. He has had the cooperation of Kubrick's widow, Christiane, and interviewed most of the key people still alive who worked on the film. Drawing also from other previously unpublished interviews, *Space Odyssey* provides a 360-degree view of the film from its genesis to its legacy, including many previously untold stories. And it features dozens of photos from the making of the film, most never previously published. "At last! The dense, intense, detailed, and authoritative saga of the making of the greatest motion picture I've ever seen...Michael Benson has done the Cosmos a great service" (Academy Award-winning actor Tom Hanks).

The Sentinel Del Rey

A SETUP IN SIN CITY When her old friend Martha decided to get married in Las Vegas, Jessica Fletcher made the trip to watch her walk down the aisle. But what were the odds that she'd be back two years later—to watch Martha stand accused of her husband's murder? Jessica's never been one to gamble, but she's willing to bet that Martha isn't guilty. Martha's husband was a high-rolling Las Vegas local with three ex-wives and plenty of jealous acquaintances. After joining Martha's defense team, Jessica combs through the man's past to find the real killer. But as the media attention grows—and Jessica is interviewed by the news anchors of Court TV—the stakes are raised, and Jessica learns how to play for keeps.

The Firstborn—the mysterious race of aliens who first became

known to science fiction fans as the builders of the iconic black monolith in *2001: A Space Odyssey*—have inhabited legendary master of science fiction Sir Arthur C. Clarke's writing for decades. With *Time's Eye* and *Sunstorm*, the first two books in their acclaimed *Time Odyssey* series, Clarke and his brilliant co-author Stephen Baxter imagined a near-future in which the Firstborn seek to stop the advance of human civilization by employing a technology indistinguishable from magic. Their first act was the *Discontinuity*, in which Earth was carved into sections from different eras of history, restitched into a patchwork world, and renamed Mir. Mir's inhabitants included such notables as Alexander the Great, Genghis Khan, and United Nations peacekeeper Bisesa Dutt. For reasons unknown to her, Bisesa entered into communication with an alien artifact of inscrutable purpose and godlike power—a power that eventually returned her to Earth. There, she played an instrumental role in humanity's race against time to stop a doomsday event: a massive solar storm triggered by the alien Firstborn designed to eradicate all life from the planet. That fate was averted at an inconceivable price. Now, twenty-seven years later, the Firstborn are back. This time, they are pulling no punches: They have sent a "quantum bomb." Speeding toward Earth, it is a device that human scientists can barely comprehend, that cannot be stopped or destroyed—and one that will obliterate Earth. Bisesa's desperate quest for answers sends her first to Mars and then to Mir, which is itself threatened with extinction. The end seems inevitable. But as shocking new insights emerge into the nature of the Firstborn and their chilling plans for mankind, an unexpected ally appears from light-years away.

Stanley Kubrick Director Pocket Books/Star Trek

A stunning new companion series to 2001 A SPACE ODYSSEY from the world's most important SF writer and his acknowledged heir 1885, the North West Frontier. Rudyard Kipling is witness to a bizarre encounter between the British army and what appears to be an impossibly advanced piece of Russian technology. And then to a terrifying intervention by a helicopter from 2037. Before the full impact of this extraordinary event has even begun to sink in, Kipling, his friends and the helicopter crew stumble across Alexander the Great's army. Mankind's time odyssey has begun. It is a journey that will see Alexander avoid his premature death and carve out an Empire that expands from Carthage to China, beating the time-slipped army of Genghis Khan in a battle outside the ruins of Babylon in the process. And it will present mankind with two devastating truths. Aliens are amongst us and have been manipulating our past and our future. And that future extends only as far as 2037, for that is the date Earth will be destroyed. This is SF that spans countless centuries and carries cutting edge ideas on time travel and alien intervention. It shows two of the genre's masters at their groundbreaking best.

2001, a Space Odyssey Penguin

Almost all students have seen 2001, but virtually none understand its inheritance, its complexities, and certainly not its ironies. The essays in this collection, commissioned from a wide variety of scholars, examine in detail various possible readings of the film and its historical context. They also examine the film as a genre piece--as the summa of science fiction that simultaneously looks back on the science fiction conventions of the past (Kubrick began thinking of making a science fiction film during the genre's heyday in the fifties), rethinks the convention in light of the time

of the film's creation, and in turn changes the look and meaning of the genre that it revived--which now remains as prominent as it was almost four decades ago. Constructed out of its director's particular intellectual curiosity, his visual style, and his particular notions of the place of human agency in the world and, in this case, the universe, 2001 is, like all of his films, more than it appears, and it keeps revealing more the more it is seen. Though their backgrounds and disciplines differ, the authors of this essay collection are united by a talent for vigorous yet incisive writing that cleaves closely to the text--to the film itself, with its contextual and intrinsic complexities--granting readers privileged access to Kubrick's formidable, intricate classic work of science fiction.

Arthur C. Clarke's 2061: Odyssey Three is truly a masterful elaboration on one man's epic vision of the universe. Only rarely does a novelist weave a tapestry so compelling that it captures the imagination of the entire world. But that is precisely what Arthur C. Clarke accomplished with 2001: A Space Odyssey. It is even more unusual that an author is able to complement so well-received an invention with an equally successful sequel. But Arthur C. Clarke's 2010: Odyssey Two enthralled a huge audience worldwide. Now, in 2061: Odyssey Three, Arthur C. Clarke revisits

the most famous future ever imagined, as two expeditions into space are inextricably tangled by human necessity and the immutable laws of physics. And Heywood Floyd, survivor of two previous encounters with the mysterious monoliths, must once again confront Dave Bowman—or whatever Bowman has become—a newly independent HAL, and the power of an alien race that has decided Mankind is to play a part in the evolution of the galaxy whether it wishes to or not.
