This book focuses on a key issue in the methodology of the social and behavioural sciences: the mixing of different research methods. The extent to which qualitative and quantitative research differ from one another has long been a subject of debate. Although many methodologists have

concluded that the two approaches are not mutually exclusive, there are few books on either the theory or the practice of mixing methods. *Mixing Methods: Qualitative and Quantitative Research* presents a comprehensive discussion of the theoretical, methodological and practical issues. It also covers a number of case studies of research which have

successfully combined qualitative and quantitative approaches. Contributors include sociologists who have written extensively on the methodology of the social sciences and researchers who have concerned themselves with important social policy issues in the fields of further education, community services and household finances. *Research Design*

The Dissertation Journey SAGE Publications, Incorporated Understanding and Evaluating Research: A Critical Guide shows students how to be critical consumers of research and to appreciate the power of methodology as it shapes the research question, the

use of theory in the study, the methods used, and how the outcomes are reported. The book starts with what it means to be a critical and uncritical reader of research, followed by a detailed chapter on methodology, and then proceeds to a discussion of each component of a research article as it is informed by the methodology. The book encourages readers to select an article from

their discipline, learning along the way how to assess each component of the article and come to a judgment of its rigor or quality as a scholarly report.

Mixing Methods: Qualitative and Quantitative Research SAGE Publications This book provides the basis for deciding whether to use a qualitative or quantitative approach for the design of a research

study and how to write up the results of a study for a journal article or dissertation. Addressing these issues, the author

offers a guide to the major design decisions, such as deciding upon a paradigm, stating the purpose of the study,

identifying the research questions and hypotheses, using theory and defining and stating the significance of the study.
