Themes include public awareness of risk and public participation in risk communication and resilience building. The first half of the book focuses on conceptual frameworks, components, and the role of citizens in risk communication. This book explores new forms of popular organisation that emerged from strikes in India and Brazil between 2011 and 2014. Based on four case studies, the author traces the alliances and relations that strikers developed during their mobilisations with other popular actors such as students, indigenous peoples, and people displaced by dam projects. The study locates the mass strikes in Brazil's construction industry and India's automobile industry in a global conjuncture of protest movements, and develops a new theory of strikes that can take account of the manifold ways in which labour unrest is embedded in local communities and regional networks. "Jörg Nowak has written an ambitious, wide-ranging and very important book. Based on extensive empirical research in Brazil and India and a thorough analysis of the secondary literature, Nowak reveals that numerous labour conflicts develop in the absence of trade unions, but with the support of kinship networks, local communities, social movements and other types of associations. This impressive work may well become a major building block for a new interpretation of global workers' struggles." —Marcel van der Linden, International Institute of Social History, The Netherlands "Nowak's book meticulously details the trajectory of strikes and its resultant new forms of organisations in India and Brazil. The central focus of this analytically rich and thought provoking book is to search for a new political alternative model of organising workers. A very good deed indeed!" —Nandita Mondal, Tata Institute of Social Sciences, India "Jörg Nowak analyses with critical sense forms of popular organization that often remain invisible. It is an indispensable book for all those who are looking for more effective analytical resources to better understand the present situation and the future promises of the workers' movements." —Roberto Vêras de Oliveira, Federal University of Paraíba, Brazil "In this timely and important study, Nowak convincingly challenges the dominant Eurocentric approach to labour conflict and calls for a new theory of strikes. He stresses the need to engage in a wider perspective that includes social reproduction, neighbourhood mobilisations, and the specific traditions of struggles in the Global South." —Edward Webster, University of Witwatersrand, South Africa

West African teachers and professors who are appropriating information and communication technologies (ICT) are making it part and parcel of education and everyday life. In Mali and beyond, they adapt ICT to their milieus and work as cultural agents, mediating between technology and society. They yearn to use ICT to make education more relevant to life, facilitate and enhance African participation in global debates and scholarly production, and evolve how Africa and Africans are projected and perceived. In sum, educators are harnessing ICT for its transformative possibilities. The changes apparent in student-teacher relations (more interactive) and classrooms (more dialogical) suggest that ICT can be a catalyst for pedagogical change, including in document-poor contexts and ones weighed down by legacies of colonialism. Learning from the perspectives and experiences of educators pioneering the use of ICT in education in Africa can inform educational theory, practice and policy and deepen understandings of the concept of appropriation as a process of cultural change.

*Creative Confluence* is a highly original work, building bridges between physics, biology, technology, economy, organizations, neuropsychology, literature, arts, and cultural history. In a clear and light tone, the work holds that rational problem-solving strategies are most relevant in deterministic problem spaces whereas creativity is pertinent in more probabilistic situations. Theories of creativity and innovation are explored by means of computer simulations. Conditionals that favor creativity such as diversity, tolerance, and openness are discussed, forwarding a compelling vision of creative leadership.

The theoretical and practical aspects of the functioning of federal systems on the African continent are covered in this study. It presents an opportunity to familiarize the reader in great detail with the Nigerian federation, past and present, vis-à-vis the national question and the problem of fiscal federalism. The book also reveals the subject of ethnic federalism in its pure form as exemplified in Ethiopia. Furthermore, it analyzes the use of hybrid, quasi-federative policy instruments in countries such as Tanzania, Republic of South Africa, Sudan, and Kenya amongst others. It addresses the issue of the opportunistic use of the federal idea, its abuse in various socio-economic and political circumstances (Nigeria), as well as the occasional and sometimes very short exposition of federalism (Madagascar) and confederalism (Senegambia). In general, the articles in the book present federalism from different angles, revealing the complex and contradictory nature of the concept and the ambiguous experience of its implementation in the African reality.

### Introduction to Neogeography Bloomsbury Publishing USA

The Ecophobia Hypothesis grows out of the sense that while the theory of biophilia has productively addressed ideal human affinities with nature, the capacity of "the biophilia hypothesis" as an explanatory model of human/environment relations is limited. The biophilia hypothesis cannot

adequately account for the kinds of things that are going on in the world, things so extraordinary that we are increasingly coming to understand the current age as “the Anthropocene.” Building on the usefulness of the biophilia hypothesis, this book argues that biophilia exists on a broader spectrum that has not been adequately theorized. The Ecophobia Hypothesis claims that in order to contextualize biophilia (literally, the “love of life”) and the spectrum on which it sits, it is necessary to theorize how very un-philic human uses of the natural world are. This volume offers a rich tapestry of connected, comparative discussions about the new material turn and the urgent need to address the agency of genes, about the complexities of 21st century representations of ecophobia, and about how imagining terror interpenetrates the imagining of an increasingly oppositional natural environment. Furthermore, this book proposes that ecophobia is one root cause that explains why ecomedia—a veritably thriving industry—is having so little measurable impact in transforming our adaptive capacities. The ecophobia hypothesis offers an equation that determines the variable spectrums of the Anthropocene by measuring the ecophobic implications and inequalities of speciesism and the entanglement of environmental ethics with the writing of literary madness and pain. This work also investigates how current ecophobic perspectives systemically institutionalize the infrastructures of industrial agriculture and waste management. This is a book about revealing ecophobia and prompting transformational change.

Investments in microfinance by institutional investors are growing. The investors benefit from a dual return investment opportunity by balancing financial and social returns. Yet, commercial microfinance institutions tend to focus on their financial performance. Reaching out to wealthier clients while crowding out poorer clients enhances their profitability - a phenomenon called mission drift. Pim Engels has analysed the data of 600 microfinance institutions operating in 84 countries and presents now new insights to the phenomenon of mission drift. Based on his findings investors can recognise and prevent mission drift taking place amongst the microfinance institutions in their

portfolio.

Natural disasters in recent years have brought the study of disaster resiliency to the forefront. The importance of community preparedness and sustainability has been underscored by such calamities as Hurricane Katrina in 2005 and the Japanese tsunami in 2011. Natural disasters will inevitably continue to occur, but by understanding the concept of resiliency as well as the factors that lead to it, communities can minimize their vulnerabilities and increase their resilience. In this volume, editors Naim Kapucu, Christopher V. Hawkins, and Fernando I. Rivera gather an impressive array of scholars to provide a much needed re-think to the topic disaster resiliency. Previous research on the subject has mainly focused on case studies, but this book offers a more systematic and empirical assessment of resiliency, while at the same time delving into new areas of exploration, including vulnerabilities of mobile home parks, the importance of asset mapping, and the differences between rural and urban locations. Employing a variety of statistical techniques and applying these to disasters in the United States and worldwide, this book examines resiliency through comparative methods which examine public management and policy, community planning and development, and, on the individual level, the ways in which culture, socio-economic status, and social networks contribute to resiliency. The analyses drawn will lead to the development of strategies for community preparation, response, and recovery to natural disasters. Combining the concept of resiliency, the factors that most account for the resiliency of communities, and the various policies and government operations that can be developed to increase the sustainability of communities in face of disasters, the editors and contributors have assembled an essential resource to scholars in emergency planning, management, and policy, as well as upper-level students studying disaster management and policy.

A wave of optimism has swept the African continent in the past decade. The pace and extent of social change in recent years, when measured in life expectancy, child and infant mortality rates, literacy, numeracy and the completion of higher education, is quite remarkable. The urban middle class is emerging and expanding in many African countries, while political democracy is developing and strengthening. These positive changes are generating economic growth and attracting foreign investment across the continent, especially in the resource sector. But Africa is still viewed by many as the “dark continent” dealing with serious problems — civil wars, ethnic division, corruption, HIV/AIDS, poverty, food security and the disastrous effects of climate change — and these issues may well impede the upward trajectory of Africa. *Canada-Africa Relations: Looking Back, Looking Ahead* — the 27th volume of the influential *Canada Among Nations* series — analyzes the ebb and flow of Canada’s engagement with Sub-Saharan Africa through different lenses over the past few decades and also looks to the future, highlighting the opportunities and the difficulties that exist for Canada and Sub-Saharan Africa. It is clear that a new Africa is emerging, and Canada must be prepared to change the nature of its relationship with the continent.
