A statistical model is a type of mathematical model that comprises of the assumptions undertaken to describe the data generation process. Statistical Modeling | Introduction to Statistical Modeling Introduction to Modeling A model is a set of rules, formulas, or equations that can be used to predict an outcome based on a set of input fields or variables.

For example, a financial institution might use a model to predict whether loan applicants are likely to be good or bad risks, based on information that is already known about past applicants.
