This book explores the relationship between and the compatibility of lean management (LM) and value-based management (VBM) approaches at the systems level. It then develops a model to improve LM and VBM professional practice by fostering a shared understanding of the value creation process within a lean system, and in doing so helps to remove existing barriers. The results promote future fruitful alliances between a company's operational and financial communities, enhancing the benefits to the enterprise and its stakeholders. The book is of primary interest to LM and VBM professionals and researchers.

This new book presents case studies from the US, the UK and Japan. Packed full of vignettes from cases studies and subscribing to a socio-cultural approach rather than the often tacit assumption that knowledge and 'technology transfer' is a logistical problem, this excellent volume illuminates the often misunderstood process of knowledge transfer. Arguing that partnership between public and private sector organizations can take many forms, some of which are very complicated Brown shows that 'partnership' should not be prescribed as a panacea for the delivery of complex policy in education, health and economic regeneration. Instead policy makers need to adopt a much more subtle and sophisticated concept of multi-agency partnership that acknowledges the time and effort needed to build trust and new shared practices. Taking issue with weak theories of change endemic in some policies and emphasizing the process of knowledge creation and the significance of consequent changes in the dynamics of human relations Brown conceptualizes innovation as collaboration between diverse organizations and individuals, the result of which is organizational learning. This book will be of great interest to students and researchers interested in policy studies, business and management and education, as well as policy makers engaged with communities of practice theory.

The project management practice spans both private and public organizations and industries, including information technology (IT), construction, healthcare, and manufacturing. What happens when these different project management practices and worlds come together, merge, or otherwise collide? In other words, what if, in project practices, different needs, standards, methodologies, and processes put projects and project managers at odds, particularly when these disciplines meet in large, megaprojects? In this case, there is a high probability of significant issues and conflict. So how should professional project managers conduct and manage their activities and interact with each other? This paper outlines the issues that emerge from an overall management perspective, with an attempt to provide a balanced approach. The end goal of this paper is to help all project managers identify solutions when facing these somewhat difficult cross discipline scenarios.

Book 2.0 is the second collection of public methodology white papers from the ISA-95/MESA Best Practices Working Group. The methodology white papers focus on applying the ISA-95 standards to accelerate the adoption of Manufacturing Operations Management (MOM) systems and the Manufacturing 2.0 Architecture (Mfg 2.0) approach. There is a focus on how to build a Manufacturing Transformation Strategy where manufacturers discover that using MOM systems combined with continuous improvement methods dramatically accelerate transformation and time-to-benefit. The business benefits from optimizing operations are realized by structuring plant workflows in ISA-95 models as a common definition foundation for Mfg 2.0 architecture. This enforces effective data structure, definition, integrity and governance across manufacturing applications. Book 2.0 explains how to implement ISA-95 workflow applications in Mfg 2.0 to execute operations tasks through the MOM and physical process levels while coordinating them to streamline plant operations and align those operations with ever-changing supply chain processes.

Commercial game companies operate in an extremely competitive environment, creating products on the bleeding edge of technology. Companies survive by evolving streamlined processes that allow them to efficiently develop these complex products and to deliver them to market quickly.

What happens when the culture and business practices of the commercial game world collide with

highly regulated procedures of the government, especially those of the military? The result is a challenging but not impossible landscape that both sides must traverse to find common ground. These two seemingly similar communities of interest (DoD M & S and Commercial Gaming, (MS & G)) have evolved differently due to the customers' needs and the market dynamics that surround them, resulting in philosophical and operational differences that must be understood for the communities to work effectively together. This document attempts to provide a basic understanding of the history, technology, product development processes, and business practices of the game industry and DoD/M & S. Furthermore, it lays out those areas of conflict and fusion while proposing some concepts and recommendations to help these two groups build sustainable, successful working relationships in the pursuit of serious games.
