"This course tests your knowledge of CCNA topics with practical, hands-on labs, including both configuration as well as troubleshooting labs. This course helps you prepare for the exam and gain the confidence to pass it! There are many topologies and many labs in this course! Networks are all around us and you are using one right now to access this course. Imagine, for a moment, how different your life would be without access to Facebook, Snapchat, Google, YouTube, Whatsapp, or any other websites on the internet? How would you live with no internet?. The internet is extremely important in modern life today and all websites and internet communication rely on networking. This reliance is only predicted to continue with the growth of the internet of Things (IoT) in the next few

years. Without routers, switches, network cabling, and protocols such as BGP, there would be no internet! This course will teach you how networks actually work and how you are able to connect to websites like Facebook, Google, and YouTube. Companies throughout the world (from the smallest to the largest) rely on networks designed, installed, and maintained by networking engineers. Join this in-demand industry! By the end of this course, you will be able to confidently discuss networking topics and start configuring real networking devices such as routers and switches. This is an introductory course, but contains a lot of information that can be directly applied to the CCNA certification."--Resource description page.

101 Labs - Book Series Experts agree that we retain only 10% of what we read but 90% of what we do. Perhaps this explains why the global pass rate for most IT exams is a ghastly 40%. This is where the 101 Labs book series can help. We are revolutionizing how IT people train for their exams and the real world with our Learn - By - Doing teaching method. 101 Labs' mission is to turn you into an IT expert by doing instead of reading. Using free software and free trials, our experts take you by the hand and walk you through every aspect of the protocols and technologies you will encounter in your IT career. We share our configuration tips and tricks with you as well as how to avoid the common mistakes many novice engineers make, which can quickly become career-ending. 101 Labs - CompTIA Network] This book is designed to help you pass the new N10-007 exam. It now features Performance-based questions (PBQs). These questions test your configuration and troubleshooting skills and add a new level of complexity to the exam. The only way to answer these types of questions is to have hands-on experience with the protocols and technology listed in the exam syllabus. The Network+ exam is probably the most useful exam in the IT industry. It equips you with all the necessary knowledge you need in order to work with other IT professionals and work in the IT industry. You learn TCP/IP, security, networking protocols and standards, best practices, subnetting and IP addressing, IPv6, troubleshooting tools and software, security, wireless, routing protocol basics, and much more. CompTIA presumes around 9-12 months of on-the-job experience for all of its exams, but of course, most of the students who take the exam don't have this. Even if they are

working in IT roles, such as in helpdesk or server support, they will have been exposed to only a tiny number of the skills tested in the exam. Doing all the labs in this book will give you that experience. Please use the free resources at www.101labs.net/resources which will help you with the labs. About the Author Paul Browning left behind a career in law enforcement in 2000 and started an IT consulting and training company. He's written over 15 best selling IT books and through his books, classroom courses, and websites he's trained tens of thousands of people from all walks of life. He's spent the last 16 years dedicated to training and teaching IT students from all walks of life to pass their exams and enjoy a rewarding career.
