**Activating the Heart** Springer Nature Project risk management is regarded as a necessary dimension of effective project delivery. Current practices tend to focus on tangible issues such as late delivery of equipment or the implications of technology. This book introduces a

framework to identify emergent behavior-centric intangible risks and the conditions that initiate them. Decision Making in Risk Management: Quantifying Intangible Risk Factors in Projects identifies the quantitative measures to assess behavior-induced risks by presenting a framework that limits the interpersonal tension of addressing behavioral risks. Included in the book is an illustrative case study from the oil and gas sector that demonstrates the use of the framework. The missing dimension of behavior-centric intangible risk factors in current risk identification is explored. The book goes on to cover management processes, providing a systematic analytical approach to mitigate subjectivity when addressing behavioral risks in projects. This book is

useful to those working in the fields of Project Management, Systems Engineering, Risk Management, and Behavioral Science.

An Introduction to LTE explains the technology used by 3GPP Long Term Evolution. The book covers the whole of LTE, both the techniques used for radio communication between the base station and the mobile phone, and the techniques used for signalling communication and data transport in the evolved packet core. It avoids unnecessary detail, focussing instead on conveying a sound understanding of the entire system. The book is aimed at mobile telecommunication professionals, who want to understand what LTE is and

how it works. It is invaluable for engineers who are working on LTE, notably those who are transferring from other technologies such as UMTS and cdma2000, those who are experts in one part of LTE but who want to understand the system as a whole, and those who are new to mobile telecommunications altogether. It is also relevant to those working in non technical roles, such as project managers, marketing executives and intellectual property consultants. On completing the book, the reader will have a clear understanding of LTE, and will be able to tackle the more specialised books and the 3GPP specifications with confidence. Key features - Covers the latest developments in release 10 of the 3GPP specifications, including the new

capabilities of LTE-Advanced Includes references to individual sections of the 3GPP specifications, to help readers understand the principles of each topic before going to the specifications for more detailed information Requires no previous knowledge of mobile telecommunications, or of the mathematical techniques that LTE uses for radio transmission and reception

The best-selling Introduction to Social Work by Lisa E. Cox, Carolyn J. Tice, and Dennis D. Long takes students to the root of the social work profession by covering its history, practice settings, and career paths within a unique advocacy framework. This advocacy practice and policy model comprised of four components—economic and social justice, a supportive environment, human needs and rights, and political access—provides an effective lens for viewing today’s social issues. Throughout the book, an emphasis on advocacy underscores the transformative opportunities and contributions of social work on not just the clinical/client level, but also at organizational, community, national, and international levels. The Second Edition

closely aligns with the latest Educational Policy and Accreditation Standards (EPAS) from the Council on Social Work Education (CSWE) and references the 2018 Code of Ethics from the National Association of Social Workers (NASW). Through the authors’ inclusion of reflective practice, students will be encouraged to engage in critical thought and contemplate a career in social work. **An Advocacy-Based Profession** OUP Oxford

A practical guide to LTE design, test and measurement, this new edition has been updated to include the latest developments This book presents the latest details on LTE from a practical and

technical perspective. Written by Agilent's measurement experts, it offers a valuable insight into LTE technology and its design and test challenges. Chapters cover the upper layer signaling and system architecture evolution (SAE). Basic concepts such as MIMO and SC-FDMA, the new uplink modulation scheme, are introduced and explained, and the authors look into the challenges of verifying the designs of the receivers, transmitters and protocols of LTE systems. The latest information on RF and signaling conformance testing is delivered by authors participating in the LTE 3GPP standards committees. This second edition has been considerably revised to reflect the most recent developments of the technologies and standards. Particularly important

updates include an increased focus on LTE-Advanced as well as the latest testing specifications. Fully updated to include the latest information on LTE 3GPP standards Chapters on conformance testing have been majorly revised and there is an increased focus on LTE-Advanced Includes new sections on testing challenges as well as over the air MIMO testing, protocol testing and the most up-to-date test capabilities of instruments Written from both a technical and practical point of view by leading experts in the field

**Readings in Modern Music** Seven Stories Press

Following on from the successful first edition (March 2012), this book gives a clear explanation of what LTE does and how it works. The content is expressed

at a systems level, offering readers the opportunity to grasp the key factors that make LTE the hot topic amongst vendors and operators across the globe. The book assumes no more than a basic knowledge of mobile telecommunication systems, and the reader is not expected to have any previous knowledge of the complex mathematical operations that underpin LTE. This second edition introduces new material for the current state of the industry, such as the new features of LTE in Releases 11 and 12, notably coordinated multipoint transmission and proximity services; the main short- and long-term solutions for LTE voice calls, namely circuit switched fallback and the IP multimedia subsystem; and the evolution and current state of the LTE market. It also

extends some of the material from the first edition, such as inter-operation with other technologies such as GSM, UMTS, wireless local area networks and cdma2000; additional features of LTE Advanced, notably heterogeneous networks and traffic offloading; data transport in the evolved packet core; coverage and capacity estimation for LTE; and a more rigorous treatment of modulation, demodulation and OFDMA. The author breaks down the system into logical blocks, by initially introducing the architecture of LTE, explaining the techniques used for radio transmission and reception and the overall operation of the system, and concluding with more specialized topics such as LTE voice calls and the later releases of the specifications. This methodical approach

enables readers to move on to tackle the specifications and the more advanced texts with confidence.

Emerging filmmakers need to know the basics of their art form: the language of the camera, and lenses, the different crew roles, the formats, the aspect ratios. They also need to know some bare-bones theory: what an auteur is, what montage is, what genres are. Most important, all filmmakers require serious grounding in film. You cannot be a great artist if you aren't versed in great art. An Introduction to Film covers all these aspects, from a director and filmmaker's perspective. According to Cox, 'Academics have a very specific take on things, and a language of their own. That

take and that language aren't mine. I'm a film director, writer, actor and producer. So my 'intro to film' may be somewhat different from the standard introductory text. I am less focused on film theory, and more on a film's meaning, the intentions of the filmmaker, and how they got their film made.'

In the tradition of Charles Duhigg's *The Power of Habit*, Christopher Cox's *The Deadline Effect* is a wise and counterintuitive book that explores the power of deadlines as uniquely effective tools of motivation and empowerment. Perfectionists and procrastinators alike agree—it's natural to dread a deadline. Whether your goal is to complete a masterpiece or just check off an overwhelming to-do list, the ticking clock signals despair. Christopher Cox knows the panic of the looming deadline all too well—as a magazine editor, he has spent years overseeing writers and journalists who couldn't meet a deadline to save their lives. After putting in a few too

many late nights in the newsroom, he became determined to learn the secret of managing deadlines. He set off to observe nine different organizations as they approached a high-pressure deadline. Along the way, Cox made an ever greater discovery: these experts didn't just meet their big deadlines—they became more focused, productive, and creative in the process. In *The Deadline Effect*, Cox shares the strategies these teams used to guarantee success while staying on schedule: a restaurant opening for the first time, a ski resort covering an entire mountain in snow, a farm growing enough lilies in time for Easter, and more. Cox explains how readers can understand the psychological underpinnings of expectations and time,

the dynamics of teams and customers, and techniques for using deadlines to make better, more assured decisions. **Bioaerosols Handbook** A&C Black Activating the Heart is an exploration of storytelling as a tool for knowledge production and sharing to build new connections between people and their histories, environments, and cultural geographies. The collection pays particular attention to the significance of storytelling in Indigenous knowledge frameworks and extends into other ways of knowing in works where scholars have embraced narrative and story as a part of their research approach. In the first section, *Storytelling to Understand*, authors draw on both theoretical and empirical work to examine storytelling as a way of knowing. In the second section,

Storytelling to Share, authors demonstrate the power of stories to share knowledge and convey significant lessons, as well as to engage different audiences in knowledge exchange. The third section, Storytelling to Create, contains three poems and a short story that engage with storytelling as a means to produce or create knowledge, particularly through explorations of relationship to place. The result is an interdisciplinary and cross-cultural dialogue that yields important insights in terms of qualitative research methods, language and literacy, policy-making, human-environment relationships, and healing. This book is intended for scholars, artists, activists, policymakers, and practitioners who are interested in storytelling as a method for teaching,

cross-cultural understanding, community engagement, and knowledge exchange.

Modern Data Analysis contains the proceedings of a Workshop on Modern Data Analysis held in Raleigh, North Carolina, on June 2-4, 1980 under the auspices of the United States Army Research Office. The papers review theories and methods of data analysis and cover topics ranging from single and multiple quantile-quantile (Q-Q) plotting procedures to biplot display and pencil-and-paper exploratory data analysis methods. Projection pursuit methods for data analysis are also discussed.

Comprised of nine chapters, this book begins with an introduction to styles of data analysis techniques, followed by an

analysis of single and multiple Q-Q plotting procedures. Problems involving extreme-value data and the behavior of sample averages are considered. Subsequent chapters deal with the use of smelting in guiding re-expression; geometric data analysis; and influence functions and regression diagnostics. The final chapter examines the use and interpretation of robust analysis of variance for the general non-full-rank linear model. The procedures are described in terms of their mathematical structure, which leads to efficient computational algorithms. This monograph should be of interest to mathematicians and statisticians.

What you have in your hand is the

culmination of the time I spent transforming in my NICU journey. Every thought, instinct, intuition, or feeling I ever had is based on the knowledge you'll find here. Too often in the NICU I meet people who are absolutely shaken by what's happened to them. They don't even know where to begin asking questions. When you're dealing with the harsh reality of having a very sick child in the NICU, talking is one of the last things you want to do. This book is a resource. It's not necessarily medical or spiritual advice, but it can be. It's a tool for NICU parents to use, so they feel whatever ease can be brought in to such a tough situation. It's one I wished I had throughout my journey. The stories here are based on raw, personal experience. I've been there. I've seen what you're

seeing. I know what you're going through. You aren't alone. And I want to help you.- FROM THE INTRODUCTION Univ of California Press

The Definitive Guide to LTE Technology Long-Term Evolution (LTE) is the next step in the GSM evolutionary path beyond 3G technology, and it is strongly positioned to be the dominant global standard for 4G cellular networks. LTE also represents the first generation of cellular networks to be based on a flat IP

architecture and is designed to seamlessly support a variety of different services, such as broadband data, voice, and multicast video. Its design incorporates many of the key innovations of digital communication, such as MIMO (multiple input multiple output) and OFDMA (orthogonal frequency division multiple access), that mandate new skills to plan, build, and deploy an LTE network. In Fundamentals of LTE, four leading experts from academia and industry explain the technical foundations of LTE in a tutorial style—providing a comprehensive overview of the standards. Following the same approach that made their recent Fundamentals of WiMAX successful, the authors offer a complete framework for understanding and evaluating LTE.

Topics include Cellular wireless history and evolution: Technical advances, market drivers, and foundational networking and communications technologies Multicarrier modulation theory and practice: OFDM system design, peak-to-average power ratios, and SC-FDE solutions Frequency Domain Multiple Access: OFDMA downlinks, SC-FDMA uplinks, resource allocation, and LTE-specific implementation Multiple antenna techniques and tradeoffs: spatial diversity, interference cancellation, spatial multiplexing, and multiuser/networked MIMO LTE standard overview: air interface protocol, channel structure, and physical layers Downlink and uplink transport channel processing: channel encoding, modulation mapping, Hybrid ARQ, multi-antenna processing,

and more Physical/MAC layer procedures and scheduling: channel-aware scheduling, closed/open-loop multi-antenna processing, and more Packet flow, radio resource, and mobility management: RLC, PDCP, RRM, and LTE radio access network mobility/handoff procedures
