This is one of a two-volume collection of texts and documents issued by the International Theological Commission (ITC), a body of theologians that advises the Vatican's Congregation for the Doctrine of the Faith. The texts and documents of the ITC address pressing theological issues, drawing upon theological experts from around the world who represent differing branches of theology yet who share a common commitment to authentically-Catholic theological reflection. Volume 2, 1986-2007, includes texts and documents exploring the following themes: faith and inculturation, the interpretation of dogma, eschatology, God the Redeemer, Christianity and world religions, the Church and the faults of the past, the diaconal ministry, human beings as the image of God, and the hope for the salvation of unbaptized infants. "The special contribution of the Commission is to gain a hearing for the common voice of theology amid all the diversities that exist. For notwithstanding the legitimate pluralism of theological cultures in the Church, the unity of theology must remain, and empower theologians to offer some common account of their subject. In these pages, therefore, one will not find the exciting theses of innovative individuals. If there is excitement here, it lies in the discovery that even in our contemporary situation it is possible to say something together despite all our differences and so to take part together in a further exploration of the one faith of the Church. All the texts which follow are the fruit of a long and often difficult dialogue. In that dialogue, not only have various disciplines, methods and ways of thought found a common path. Over and above that, the wider dialogue of theologians with the bishops, as well as between bishops and the Petrine office in the Church, has found a voice. It is precisely for this reason that the Theological Commission represents an authentic continuation of the great experience of the Council and a clarification of its true bearing." --Joseph Cardinal Ratzinger from the Preface to Volume One

In spite of the fact that APOS Theory has been used extensively in numerous scholarly publications, in the design of textbooks, and in teaching practice, there is no single references that contains all the relevant information about its components, and provides guidance about its application. The goal of this book is to present the main elements of APOS theory. It should be useful for researchers who work with, or would like to learn more about, this theoretical approach, people who are interested in the way which mathematical conceptions are constructed according to this theory, Mathematics Education researchers, graduate students in Mathematics Education, and Mathematics instructors.

This third edition of the Handbook of International Research in Mathematics Education provides a comprehensive overview of the most recent theoretical and practical developments in the field of mathematics education. Authored by an array of internationally recognized scholars and edited by Lyn English and David Kirshner, this collection brings together overviews and advances in mathematics education research spanning established and emerging topics, diverse workplace and school environments, and globally representative research priorities. New perspectives are presented on a range of critical topics including embodied learning, the theory-practice divide, new developments in the early years, educating future mathematics education professors, problem solving in a 21st century curriculum, culture and mathematics learning, complex systems, critical analysis of design-based research, multimodal technologies, and e-textbooks. Comprised of 12 revised and 17 new chapters, this edition extends the Handbook's original themes for international research in mathematics education and remains in the process a definitive resource for the field.

APOS Theory Routledge

This volume addresses the key issue of the initial education and lifelong professional learning of teachers of mathematics to enable them to realize the affordances of educational technology for mathematics. With invited contributions from leading scholars in the field, this volume contains a blend of research articles and descriptive texts. In the opening chapter John Mason invites the reader to engage in a number of mathematics tasks that highlight important features of technology-mediated mathematical activity. This is followed by three main sections: An overview of current practices in teachers' use of digital technologies in the classroom and explorations of the possibilities for developing more effective practices drawing on a range of research perspectives (including grounded theory, enactivism and Valsiner's zone theory). A set of chapters that share many common constructs (such as instrumental orchestration, instrumental distance and double instrumental genesis) and research settings that have emerged from the French research community, but have also been taken up by other colleagues. Meta-level considerations of research in the domain by contrasting different approaches and proposing connecting or uniting elements

By providing case studies of Christian organizations and networks which have recently undergone succession, and drawing upon perspectives from leadership theory, psychology, organizational development, and theology, this work shows multiple overlapping aspects of succession. These facets include plans, processes, gender implications, theologies of leadership, successor origins, relationship between outgoing and incoming leaders, selection methods, and organizational beliefs manifested in succession ceremonies. An analysis of the various successions studied reveals the need for the organization or network to reflect on its own understandings and theologies of leadership; without so doing, organizational succession could be impaired. While exploring the complexities of leadership succession, particularly founder succession, this book provides clear lessons and guidance for those navigating such transitions in leadership.

This survey focuses on the main trends in the field of calculus education. Despite their variety, the

findings reveal a cornerstone issue that is strongly linked to the formalism of calculus concepts and to the difficulties it generates in the learning and teaching process. As a complement to the

main text, an extended bibliography with some of the most important references on this topic is included. Since the diversity of the research in the field makes it difficult to produce an exhaustive

state-of-the-art summary, the authors discuss recent developments that go beyond this survey and put forward new research questions.
