Economics sometimes seems to be stacked against social, environmental and individual well-being. But it doesn't have to be like this. A new approach to economics - deriving as much from Ruskin and Schumacher as from Keynes or Smith - has begun to emerge. Skeptical about money as a measure of success, this new economics turns our assumptions about wealth and poverty upside down. It shows us that real wealth can be measured by increased well-being and environmental sustainability rather than just having and consuming more things. This book is the first accessible and straightforward guide to the new economics. It describes the problems and bizarre contradictions in conventional economics as well as the principles of the emerging new economics, and it tells the real-world stories of how new economics is being successfully put into practice around the world. An essential guide to understanding new economics for all those who care about making economics work for people and planet.

The book tackles a number of challenging questions: How can we conceptualize architectural objects and practices without falling into the divides architecture/society, nature/culture, materiality/meaning? How can we prevent these abstractions from continuing to blind architectural theory? What is the alternative to critical architecture? Mapping controversies is a research method and teaching philosophy that allows divides to be crossed. It offers a new methodology for following debates surrounding contested urban knowledge. Engaging in explorations of on-going and recent controversies and re-visiting some well-known debates, the analysis foregrounds, traces and maps the changing sets of positions triggered by design: the 2012 Olympics stadium in London, the Welsh parliament in Cardiff, the Heathrow airport runway extension, the Sydney Opera House, the Eiffel Tower. By mobilizing digital technologies and new computational design techniques we are able to visualize the variety of factors that impinge on design and track actors' trajectories, changing groupings, concerns and modalities of action. The book places architecture at the intersection of the human and the nonhuman, the particular and the general. It allows its networks to be re-established and to run between local and global, social and technical. Mapping controversies can be extrapolated to a wide range of complex phenomena of hybrid nature.

Five Ways to Make Architecture Political presents an innovative pragmatist agenda that will inspire new thinking about the politics of design and architectural practice. Moving beyond conventional conversations about design and politics, the book shows how recent developments in political philosophy can transform our understanding of the role of the architect. It asks: how, when, and under what circumstances can design practice generate political relations? How can architectural design become more 'political'? Five central chapters, which can be read alone or in sequence, explore the answers to these questions. Powerfully pragmatic in approach, each presents one of the 'five ways to make architecture political', and each is illustrated by case studies from a range of contemporary situations around the world. We see how politics happens in architectural practice, learn how different design technologies have political effects, and follow how architects reach different publics, trigger reactions and affect different communities worldwide. Combining an accessible introduction to contemporary political concepts with a practical approach for a more political kind of practice, this book will stimulate debate among students and theorists alike, and inspire action in established and start-up practices.
