*Dragon in the Air: Transformation of China's Aviation Industry and Air Force* is a comprehensive and multidimensional study of the air force and the emerging aviation industry in PRC. The author has made a bold effort to trace the changing character of Chinese Air Force from the time of nationalists and perspicuously hunted down the history by dividing PLAAF into three distinct periods. The first stage from 1949-1979 has been characterized by the early blues of PLAAF under Mao's leadership. Deng then had an overbearing influence in the second stage from 1979-1993, also instrumental in initiating the process of transformation from an ancillary of PLA into an independent arm. The third stage was however the defining moment which witnessed the start of modernization of PLAAF under the leadership of Jiang Zemin. The author has very lucidly tried to explain the strong link between modernisation of PLAAF and the emergence of China's aviation industry and therefore divided the book in two parts. While the first part of the book maintains focus on the air force and the process of modernisation; the second part dwells with the evolution of the aviation industry and the changes in the organisation structure. He has pointedly highlighted China's increasing defence spending and growing military capabilities resulting in China developing new aerial platforms, ballistic missiles and modern firepower. As a result China is enhancing strategic power projection by building capabilities to carry out air strikes, reconnaissance and early warning and air and missile defence to put together a potent military force by the middle of this century.

This book represents the seventh edition of what has become an established reference work, MAJOR COMPANIES OF THE FAR EAST & AUSTRALASIA.

This volume has been carefully researched and updated since publication of the sixth edition, and provides more company data on the most important companies in the region. The information in the book was submitted mostly by the companies themselves, completely free of charge. For the first time, a third volume has been added to the series, covering major companies in Australia and New Zealand. The companies listed have been selected on the grounds of the size of their sales volume or balance sheet or their importance to the business environment of the country in which they are based. The book will be updated and published every year. Any company that considers it is eligible for inclusion in the next edition of MAJOR COMPANIES OF THE FAR EAST & AUSTRALASIA, should write to the publishers. No charge whatsoever is made for publishing details about a principal Asian company. Whilst the publishers have taken every care to ensure accurate reporting of the company information contained in this book, no liability can be accepted by either the publishers, their editorial staff, or their distributors for any errors or omissions, nor for the consequences thereof. . Graham & Trotman Ltd is a member of the Kluwer Academic Publishers Group and publishes over 450 business and technology books. A catalogue is available on request.

*China Trade Report* Springer Science & Business Media

A guide that profiles over 2600 companies in 29 countries whose stocks comprise the new Dow Jones World Stock Index. Created to provide a measure of worldwide stock performance, this book supplies investors with information about the entities behind the Dow Jones numbers.

Edward Elgar Publishing

The emergence of China as a future major participant in international aviation raises some interesting questions, especially from a strategic policy perspective. The progressive shift from a command to a mixed market economy under the central leadership of the Beijing administration now finds itself faced with the needs to balance a strategic duality in the context of the role of China's civil aviation industry. In a very real sense this situation requires the design and accommodation of a growing role for China's mainstream carriers within the operational context of the need to meet the complex challenges from increasing international market competition. In parallel with such major external pressures, central government must also accommodate domestic priorities with regard to internal economic development. The fruits of economic progress as a function of market reform are commonly understood to have positively reshaped the live of only a proportion of the national population to date. The need to create greater access to economic growth for the more remote western and northern provinces has required that the rapid development of airports become a factor in the planning and allocation of developmental priorities. To complicate matters further, prevailing requirements of airspace defence remain a major parameter within the larger context of national aviation policy. This book explores the political, economic and strategic issues raised by the inevitable tension between the domestic and international aspects of Beijing's current civil aviation strategy. It also seeks to identify some of the problems that face the industry as a key sector in the larger context of macroeconomic reform and the further pressures now being exerted by China's membership of the WTO.

*Major Companies of the Far East and Australasia* John Wiley & Sons

China is playing a growing role in the world economy. It is one of the world's fastest growing countries and is the tenth largest exporter. China is also a significant recipient of foreign aid and a major borrower on international capital markets. Even more significantly, it is attracting vast amounts of foreign direct investment. China in the World Economy examines the implications of China's emergence as a major player in the world economy. Its integration into the international economic order poses major difficulties for the rest of the world. These problems including bringing China's mixed market/centrally planned economy into the GATT, adapting to competition from labor-intensive Chinese exports, encouraging further market-oriented reform, and accommodating its demand for international capital. But China's participation in the global economy also offers important opportunities for trade, investment and international cooperation to promote world peace and stability. Nicholas Lardy anticipates that China will continue on a rapid growth path, thus magnifying the policy challenges and opportunities for its trading partners, including the U. S. He recommends a series of steps to facilitate China's full participation in the world economy.

This is a review of the FAA's oversight of air carriers' outsourced aircraft maintenance. As of July 14, 2008, there were 4,159 domestic and 709 foreign repair stations certificated by FAA to perform maintenance on U.S. aircraft. When an air carrier uses an FAA-certificated repair station to repair its aircraft or parts, the repair station's organization becomes an extension of the air carrier's maintenance organization. This report: (1) identifies the type and quantity of maintenance performed by external repair stations; and (2) determines whether FAA is effectively monitoring air carriers' oversight of external repair stations' work and verifying that safety requirements are met. Illustrations.

*Predicasts F & S Index International Annual* SAGE Publications, Incorporated

This detailed book explores and provides insights into the development and transformation of various clusters, economies and industrial sectors in East and Southeast Asia. The authors study a number of important issues including the role of information and communication technology in economic growth, an emerging biomedical cluster in South Korea, an industrial agglomeration of Taiwanese electronics firms in China, and different

sectorial and regional growth models in China. They also investigate the increasing relevance of cluster policies and the need to understand them in the context of the institutional and structural transition of newly industrializing East Asian economies. The book moves on to study the technology intensity of FDI in Vietnam and the implications for economic growth and emerging clusters, as well as the origin and characteristics of foreign technology transfer in a Chinese aircraft industry cluster. Clusters and Economic Growth in Asia will greatly appeal to academics, researchers, politicians, policy planners and industrial specialists, as well as those with a specific interest in clusters and economic growth in Asian economies.

**The Journal of the Aeronautical Society of India** 中国(航空)工业

An assessment of China's aerospace manufacturing capabilities and how China's participation in commercial markets and supply chains contributes to their improvement. It examines China's aviation and space manufacturing capabilities, government efforts to encourage foreign participation, transfers of foreign technology to China, the extent to which U.S. and foreign aerospace firms depend on supplies from China, and their implications for U.S. security interests.

[Travel Indonesia](#) DIANE Publishing

This monograph assesses China's aerospace capabilities and the extent to which China's participation in commercial aerospace markets and supply chains is contributing to the improvement of those capabilities. It examines China's commercial aviation manufacturing capabilities, its commercial and military capabilities in space, Chinese government efforts to encourage foreign participation in the development of China's aerospace industry,

transfers of foreign aerospace technology to China, the extent to which U.S. and other foreign aerospace firms depend on supplies from China, and the implications of these issues for U.S. security interests. China's aerospace industry has advanced at an impressive rate over the past decade, partly due to the increasing participation of its aerospace industry in the global commercial aerospace market and the supply chains of the world's leading aerospace firms. China's current ability to meet demand with indigenous aircraft is limited, however, and much of the demand will be filled by imported aircraft. China's space capabilities have improved rapidly, on the other hand, and it has developed and deployed an increasingly wide range of satellites. China's growing civilian aerospace capabilities are unquestionably contributing to the development of its military aerospace capabilities, but whether the United States could significantly improve its security through alterations of its policy toward civil aerospace cooperation with China without having a significant negative effect on its own economic interests is unclear.
