Don't you love those moments in your course when students are fully engaged? When the Aha! revelations are bursting like fireworks? The Financial Accounting author team has developed a concise and well-organised learning framework to show students that accounting consists of three major processes: measuring, communicating, and decision-making. By consistently tying each lesson into this framework, instructors can significantly improve student engagement and outcomes. For

the fifth edition, the authors have retained popular digital features such as General Ledger Problems, Excel Simulations, and algorithmic end-of-chapter questions, while also including new content based on skills today's students need. New features in the fifth edition include Applying Excel problems, enhancing decision maker's content by developing auto-graded cases, and expanding video content with new Concept Overview Videos. Building on the success of the first four editions of Financial Accounting, this new edition will motivate, engage, and challenge students. Paired with the market-leading power of the Connect platform, Spiceland, Thomas, Herrmann, Financial Accounting will truly illuminate the financial accounting course for each

student.

Principles of Accounting Volume 1 - Financial Accounting Pearson

Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in

particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all

topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the

topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in

strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

Accounting for Managers explains how accounting information is used by non-financial managers. The book emphasises the interpretation, rather than the construction, of accounting information and encourages a critical, rather than unthinking acceptance, of the underlying assumptions behind accounting. It links theory with practical examples and case studies drawn from real life business situations in service, retail and manufacturing industries.
