The focus of this book is on holiday planning and decision making, which is the cornerstone of tourist behaviour and tourism marketing. The first three chapters deal with the basics, including an overview of decision-making paradigms and variables (chapter 1), a critical review of existing tourist behaviour models (chapter 2) and a description of the methods that may be used for studying holiday decision making (chapter 3). The chapters that follow relate the findings of an in-depth qualitative and interpretative study that followed the decision making process of 25 Belgian households during a whole year. Chapter 4 discusses the context in which holiday decisions are made. In the next two chapters, the focus is on the decision-making process in itself both at the generic and holiday levels (chapter

5) and at the destination level (chapter 6). Post-experience processes are investigated in chapter 7, whereas group processes are the particular focus of chapter 8. Chapter 9 presents the integrative and conclusive part of the book where a new typology of holidaymakers is proposed. The book has a subject index.

Within only a few years, global warming has emerged from scientific speculation into an environmental threat of worldwide concern. Yet the scientific community remains uncertain as to the long-term trends and effects of climate change, and this uncertainty has been seized on as justification for inaction by an international community reluctant to bear the costs of policies to reduce greenhouse gas emissions. Valuing Climate Change presents concrete, economic evidence of the need for action. Fankhauser assesses the costs of a doubling of GHG emissions to be a

significant percentage of gross world product; a figure which he then compares to the costs of reducing emissions. In his comparison, he looks at regional as well as global estimates of damage, and takes account of the non-climate change benefits of GHG reductions, such as a switch in the energy sector to cleaner technologies or renewable fuels, and the impacts on transport, with reduced congestion and improved air quality. It is clear that the stakes are high, and Fankhauser believes that tougher targets may be needed than those set out in the Framework Convention on Climate Change. He assesses the optimum policy responses to GHG reduction, the likely instruments for achieving it and the potential for international cooperation in dealing with the problems. This is a major contribution to the rapidly changing debate on global warming.

With its focus on the practical application of the techniques of multivariate statistics, this book shapes the powerful tools of statistics for the specific needs of ecologists and makes statistics more applicable to their course of study. It gives readers a solid conceptual understanding of the role of multivariate statistics in ecological applications and the relationships among various techniques, while avoiding detailed mathematics and the underlying theory. More importantly, the reader will gain insight into the type of research questions best handled by each

technique and the important considerations in applying them.

Whether used as a textbook for specialised courses or as a supplement to general statistics texts, the book emphasises those techniques that students of ecology and natural resources most need to understand and employ in their research. While targeted for upper-division and graduate students in wildlife biology, forestry, and ecology, and for professional wildlife scientists and natural resource managers, this book will also be valuable to researchers in any of the biological sciences.

"Highly personal and original . . . McKibben goes beyond Marshall McLuhan's theory that the medium is the message." —The New York Times Imagine watching an entire day's worth of television on every single channel. Acclaimed environmental writer and culture critic Bill McKibben subjected himself to this sensory overload in an experiment to verify whether we are truly better informed than previous generations. Bombarded with newscasts and fluff pieces, game shows and talk shows, ads and infomercials, televangelist pleas and Brady Bunch episodes, McKibben processed twenty-four hours of programming on all ninety-three Fairfax, Virginia, cable stations. Then, as a counterpoint, he spent a day atop a quiet and remote mountain in the Adirondacks, exploring the unmediated man and making small yet vital discoveries about himself and the world around him. As relevant now as it was when originally written in 1992—and with new material from the author on the impact of the Internet age—this witty and astute book is certain to change the way you look at television and perceive media as a whole. critique of technological society.”-Cleveland Plain Dealer

The importance of violence as a contributory factor to urban poverty in Jamaica has gone largely unresearched. This paper outlines the results of a study undertaken by the World Bank and the government of Jamaica to focus on the issue. The study uses a participatory urban appraisal methodology in five poor urban areas, mainly in Kingston, to identify and understand local community perceptions of four different aspects of violence: its causes; its interrelationship with poverty; its impact on employment, economic and social infrastructure, and local social institutions; and ways in which government, communities, households, and individuals can work to reduce it.

In the last decade, a large number of major discoveries have shed light on the molecular mechanisms of lymphocyte migration and the anatomy of immune responses. In *T-Cell Trafficking: Methods and Protocols*, expert researchers explore how the development of novel and cutting-edge techniques, particularly in the field of real-time imaging and genetic manipulation, have led to an increased understanding of lymphocyte trafficking. Written by internationally recognized experts in their respective fields, chapters provide state-of-the-art protocols to study lymphocyte migration and T-cell: endothelial cell interactions in vitro, address various approaches used for direct visualization of the development of the lymphoid system, lymphocyte recirculation, and effector responses in experimental models in vivo, and explore lymphocyte migration and inflammation in the human system. Composed in the highly successful *Methods in Molecular Biology™* series format, each chapter contains a brief introduction, step-by-step methods, a list of necessary materials, and a Notes section which shares tips on troubleshooting and avoiding known pitfalls. Innovative and highly practical, *T-Cell Trafficking: Methods and Protocols* is an essential manual for newcomers in this ever-expanding and exciting area of research, as well as a valuable addition to more specialized laboratories.

Manipulative Therapy provides a systematic overview of chain reactions which are the basis of a rational holistic

approach. These reactions are closely related to the upright human posture and to the "deep stabilisation system" as shown in the work of Richardson et al in *Therapeutic Exercise for Spinal Stabilisation in Low Back Pain*. This approach has meant a considerable advance in the therapy and rehabilitation of patients. It gives a balanced picture of the importance of muscles, joints and soft tissues, under the control of the nervous system, the textbook aims to treat disturbance of function, the most common cause of pain in the motor system, in the most effective way. Locomotor system dysfunctions are shown to be treated very effectively using manual medicine techniques. Spinal column and joint mobility can be restored, and pain triggered by the autonomic nervous system can be positively influenced. This is a comprehensive source of information relating to pathogenesis, diagnosis, indications and treatment methods, incorporating the latest research findings. Radiological diagnosis is shown as laying the foundation for successful diagnosis and treatment with manual medicine techniques. Typical conditions associated with pain in the locomotor system is presented and described in functional terms for the first time. The book concludes with chapters covering preventative aspects and expert assessment. *Manipulative Therapy: Musculoskeletal Medicine* is the follow on from: *Manipulative Therapy in Rehabilitation of the Locomotor System*, published by Butterworth Heinemann, 1985.

Nothing happens in the world without energy conversion and entropy production. These fundamental natural laws are familiar to most of us when applied to the evolution of stars, biological processes, or the working of an internal combustion engine, but what about industrial economies and wealth production, or their constant companion, pollution? Does economics conform to the First and the Second Law of Thermodynamics? In this important book, Reiner Kümmel takes us on a fascinating tour of these laws and their influence on natural, technological, and

social evolution. Analyzing economic growth in Germany, Japan, and the United States in light of technological constraints on capital, labor, and energy, Professor Kümmel upends conventional economic wisdom by showing that the productive power of energy far outweighs its small share of costs, while for labor just the opposite is true. Wealth creation by energy conversion is accompanied and limited by polluting emissions that are coupled to entropy production. These facts constitute the Second Law of Economics. They take on unprecedented importance in a world that is facing peak oil, debt-driven economic turmoil, and threats from pollution and climate change. They complement the First Law of Economics: Wealth is allocated on markets, and the legal framework determines the outcome. By applying the First and Second Law we understand the true origins of wealth production, the issues that imperil the goal of sustainable development, and the technological options that are compatible both with this goal and with natural laws. The critical role of energy and entropy in the productive sectors of the economy must be realized if we are to create a road map that avoids a Dark Age of shrinking natural resources, environmental degradation, and increasing social tensions.

Congenital Heart Disease in Pediatric and Adult Patients: Anesthetic and Perioperative Management provides a comprehensive, up-to-date overview of care of the pediatric patient undergoing cardiac surgery and anesthesia. After introductory chapters that encompass pediatric cardiovascular embryology, physiology and pharmacology, diagnostic approaches and preoperative

considerations are explained. The intraoperative management of a wide range of specific lesions is then discussed, with full descriptions of anesthesia plans added with descriptions on diagnostic methods and surgical interventions. Postoperative care is also addressed, and a concluding section considers anesthesia outside the cardiac operating room. In the twenty-first century, advances in minimally invasive technology have led to the introduction of a wide array of pediatric cardiac procedures. More traditional surgical procedures have also been transformed by new devices and surgical approaches. The cardiac anesthesiologist is faced with an ever-increasing role in the perioperative care of pediatric patients undergoing cardiologic procedures in operating rooms, as well as less conventional locations. In this book, accomplished experts from around the world in the fields of pediatric anesthesia, cardiology, and cardiac surgery describe the multiple facets of caring for this very unique patient population.

 by A. Berthoz The publication of this volume, edited by Adriano Ferrari and Giovanni Cioni, is a major event for several reasons. Most importantly, it concerns an area of child pathology that has yet to be fully explored. In this context, the authors' efforts to compile their observations as well as those of other clinicians and to elaborate their theories have resulted in an essential step in the field of cerebral palsy (CP). The

originality of the book is its very clear focus, while at the same time the authors have encouraged the book's contributors to express their ideas and personal opinions. This leads sometimes to redundancy, but this is precisely one of the benefits of the book - cause the same problems are then exposed from

different points of views. The reader is thus spared the normative attempts of many other pathology books, in which the complexity of a given disease is hidden by the authors' or editors' desire to impose a rigid taxonomy or epidemiology.
