In this Research Topic, we plan to assess the interface of conservation and science, looking at the various aspects of tiger conservation by assessing what advances have been made in each relevant field, where are the limitations, and what does the data show us about successes and failures in conserving tigers, their prey and their habitat. Through a series of multiple-authored papers, we plan to explore the realms of tiger and prey monitoring, law enforcement, habitat restoration efforts, human-tiger conflicts, landscape connectivity and ultimately how tiger conservation strategies have evolved and emerged leading up to the present. Coming at this critical time - with 2022 being the Year of the Tiger and the end of a 12-year pledge by Tiger Range Countries to double tiger numbers - this Research Topic will provide a landmark publication reflecting back on the past 12 (and more) years of tiger conservation and research, and laying

the foundation for the coming twelve years. While the focus is on tigers, the studies will have wide application to efforts to conserve other large-bodied carnivores. In 2010, the lunar year of the tiger, a "Tiger Summit" was held in the Russian city of St. Petersburg, where 13 Tiger Range Countries pledged to double tiger numbers by the next lunar year of the tiger in 2022. The science of tiger conservation has developed in multiple ways over the past twelve years. As we approach this benchmark, when tiger range countries will be reporting on their past efforts and planning for the next twelve years, it is important to assess what has been accomplished, and what yet needs to be done; where there have been successes, and what has not worked. This is why it is particularly important to employ a science-based approach to conservation, something that is not universally adopted by tiger conservation advocates, but which we, as editors of this collection consider central to successful tiger conservation. This Research Topic will lay the foundation for effective science-based conservation of tigers for the next twelve years. In 2021 a collection of representatives from the international

tiger conservation community developed a “joint NGO vision” of priorities in tiger conservation for the coming twelve years. In this Research Topic we plan to focus on the critical issues for global tiger conservation as identified by this international group. This topic will discuss these issues and highlight how they have been addressed in diverse tiger landscapes, including both successes and failures. Our goal is to provide a foundation and structure for site-based tiger conservation actions within, and beyond, the next 12-year lunar cycle. This Research Topic was conceptualized and launched by Dale Miquelle, Thomas Gray, Luke Hunter, Abishek Harihar, John Goodrich and Matthew Linkie, in collaboration with Frontiers, to focus on:

- The Convergence of Site-based tiger conservation strategies
- Opportunities for restoration of tigers across their historical range
- Recovery of tigers in Thailand’s tiger conservation landscapes (what works).
- An integrated law enforcement approach for protecting tigers and their prey in Sumatra.
- Cost of ranger protection for tiger protected area.
- Evaluating a site-based enforcement strategy, Malaysia.
- Beyond density: better indicators for tiger monitoring.
- Prey Recovery is the foundation of tiger restoration.
- Resolving human-tiger conflicts.
- Community-based tiger conservation: Can it work?
- Ensuring connectivity of tiger conservation landscapes.
- Emerging infectious disease threats.
- Tiger conservation and global/regional initiatives.

Modern Medicine: Biomedical Devices, Medical Gases, Radiopharmaceuticals, New Drug Discovery, Volume 2 discusses the procedures of drug approval and

regulatory requirements that must be met according to the United States Food and Drug Administration (FDA), the European Medical Agency (EMA), and the Central Drug Standard Control Organization (CDSCO). In the rapidly evolving landscape of modern medicine, groundbreaking innovations have emerged that are reshaping the way we approach healthcare. Modern Medicine delves into the cutting-edge realms of medical devices, medical gases, radiopharmaceuticals, and new drug discovery, offering a comprehensive exploration of these transformative fields that are revolutionizing patient care and medical practices. Discover the future of healthcare technology, and uncover the intricate world of biomedical engineering, where state-of-the-art devices seamlessly merge with the human body to monitor, diagnose, and treat ailments. Dive deep into the utilization of medical gases for respiratory conditions, pain management, and even novel applications in regenerative medicine. Unravel the mysteries of radiopharmaceuticals, a fusion of molecular imaging and therapy that offers unprecedented insights into the inner workings of the human body. Embark on a journey through the intricate processes of drug discovery, where groundbreaking research and cutting-edge technologies are yielding therapies that were once deemed impossible. Modern Medicine is a must-read for medical professionals, researchers, students, and anyone intrigued by the remarkable intersection of science, technology, and patient well-being. Join us on a journey to the forefront of medical innovation, where the unimaginable becomes reality, and the future of healthcare takes shape.

before our eyes. The chapter on regulatory implications for the approval process in this book will be the most useful resource for researchers and students, particularly those with backgrounds in pharma, forensic medicine, regulatory affairs, or those who aspire to succeed in drug research. Additionally, the information contained in this volume of the book could be of great interest to researchers working in the pharmaceutical and health industries.

The dreaded protozoal diseases caused by a number of Kinetoplastid parasites threaten mankind, as therapeutic tools for the treatment of most parasitic diseases are extremely limited. Development of commercially available vaccines is still far from reality, though research and trial programs continue. This book covers current research into drug therapeutics for the conditions caused by the parasites, which if viewed globally, pose an increasing threat to human health and welfare.

REGINE is a research project on regularisation practices in the European Union. The aim of the project is to provide a thorough mapping of practices

relating to the regularisation of third country nationals illegally resident in EU Member States. Two additional non-EU countries - Switzerland and the US - will also be covered to gain insights in regularisation practices and the impact of regularisations elsewhere. In examining regularisation practices, the project also investigates the relationship of regularisation policies to the overall migration policy framework, including to protection issues and refugee policies. Moreover, the project examines the political position of different stakeholders towards regularisation policies on the national level. Finally, the project examines potential options for policies on regularisation on the European level, incorporating Member States as well as other stakeholders' views on possible instruments on the European level.

Distribution theory, a relatively recent mathematical approach to classical Fourier analysis, not only opened up new areas of research but also helped promote the development of such mathematical disciplines as ordinary and partial differential equations, operational calculus, transformation theory, and functional analysis. This text was one of the first to give a clear explanation of distribution theory; it combines the theory effectively with extensive practical applications to science and engineering problems. Based on a graduate course given at the State University of New York at Stony Brook, this book has two objectives: to provide a comparatively elementary introduction to distribution theory and to describe the generalized Fourier and Laplace transformations and their applications to integrodifferential equations, difference

equations, and passive systems. After an introductory chapter defining distributions and the operations that apply to them, Chapter 2 considers the calculus of distributions, especially limits, differentiation, integrations, and the interchange of limiting processes. Some deeper properties of distributions, such as their local character as derivatives of continuous functions, are given in Chapter 3. Chapter 4 introduces the distributions of slow growth, which arise naturally in the generalization of the Fourier transformation. Chapters 5 and 6 cover the convolution process and its use in representing differential and difference equations. The distributional Fourier and Laplace transformations are developed in Chapters 7 and 8, and the latter transformation is applied in Chapter 9 to obtain an operational calculus for the solution of differential and difference equations of the initial-condition type. Some of the previous theory is applied in Chapter 10 to a discussion of the fundamental properties of certain physical systems, while Chapter 11 ends the book with a consideration of periodic distributions. Suitable for a graduate course for engineering and science students or for a senior-level undergraduate course for mathematics majors, this book presumes a knowledge of advanced calculus and the standard theorems on the interchange of limit processes. A broad spectrum of problems has been included to satisfy the diverse needs of various types of students.

“Development of novel vaccines” gives an overview of the tasks in basic research leading to the final product – the vaccine and its applications, belonging to the most complex biologics

in the pharmaceutical field. Distinct from most textbooks in the vaccine arena, the current issue focuses on the translational aspect, namely, how research results can be transformed into life-saving medical interventions. Each chapter of the book deals with one important paradigm for the development of novel vaccines, along the value chain towards the final vaccine, and furthermore, with the inevitable tools required for this process. Contributions are prepared by teams of scientists, all of whom are experts in the field, most of them anchored in biomedical organizations devoted to translational culture, thereby lighting the certain topics from different views. This volume is a must read for researchers engaged in vaccine development and who really want to see their research results to become a product.

Chemically Deposited Nanocrystalline Metal Oxide Thin Films Frontiers Media SA

This book guides beginners in the areas of thin film preparation, characterization, and device making, while providing insight into these areas for experts. As chemically deposited metal oxides are currently gaining attention in development of devices such as solar cells, supercapacitors, batteries, sensors, etc., the book illustrates how the chemical deposition route is emerging as a relatively inexpensive, simple, and convenient solution for large area deposition. The advancement in the nanostructured materials for the development of devices is fully discussed.

While the use of electric two-wheelers has increased in the People's Republic of

China (PRC) in the past decade, such unparalleled growth has not extended beyond the PRC's borders to countries, such as India and Viet Nam, where environmentally detrimental gasoline motorcycles dominate. This report documents market conditions in Ahmedabad, India, and Ha Noi, Viet Nam, to explain why this is so, and analyzes the potential environmental impact of electric two-wheelers to show how they could chart a path toward sustainable transport in these and other countries in the region.

Don Asher, author of the popular OVERNIGHT series, tackles one of the hottest topics in business today: the executive r?©sum?©. From V.P. on up to C.E.O., this book provides the largest compendium of executive r?©sum?©s available to the general public. Whether he's giving hints on getting head-hunted, upgrading your current position, or launching an all-out top-level job hunt, Asher has the tricks of the trade, and the successful executive client base to back it up. Through R?©sum?© Righters, his very successful service, he has helped many, many executive-suite types (from bank presidents to advertising directors, sales leaders to legal eagles) find that elusive dream job. Packed with hints and tricks discreet enough for the executive suite, but offbeat enough to be unusually effective. Includes hard-to-find information on such high-level requirements as the narrative biography, the modified chronological r?©sum?©, and the corporate presentation.

This open access textbook takes the reader step-by-step through the concepts of mechanics in a clear and detailed manner. Mechanics is considered to be the core of physics, where a deep understanding of the concepts is essential in understanding all branches of physics. Many proofs and examples are included to help the reader grasp the fundamentals fully, paving the way to deal with more advanced topics. After solving all of the examples, the reader will have gained a solid foundation in mechanics and the skills to apply the concepts in a variety of situations. The book is useful for undergraduate students majoring in physics and other science and engineering disciplines. It can also be used as a reference for more advanced levels.

This annual overview report of national trends in health statistics contains a Chartbook that assesses the nation's health by presenting trends and current

information on selected measures of morbidity, mortality, health care utilization and access, health risk factors, prevention, health insurance, and personal health-care expenditures. Chapters devoted to population characteristics, prevention, health risk factors, health care resources, personal health care expenditures, health insurance, and trend tables may provide the health/medical statistician, data analyst, biostatistician with additional information to complete experimental studies or provide necessary research for pharmaceutical companies to gain data for modeling and sampling. Undergraduate students engaged in applied mathematics or statistical compilations to graduate students completing biostatistics degree programs to include statistical inference principles, probability, sampling methods and data analysis as well as specialized medical statistics courses relating to epidemiology and other health topics may be interested in this volume. Bridging the Family Care Gap explores expected future shortages of family caregivers of older persons and identifies potential solutions. The book examines the sustainability and availability of care management models

and whether they can be effectively scaled up to meet community needs. It identifies newly emerging policy initiatives at local, state, and federal levels. The book addresses the state of family caregiving science, dissemination and implementation of promising programs and supports, technological innovations, and other strategies to offset the family care gap. This edited volume also explores lay healthcare workers as guides, interpreters, and advocates in healthcare systems that provide continuity of contact for family caregivers. Details threats to family caregiving-sociodemographic, chronic disease, and socioeconomic challenges Presents solutions to the caregiving gap in a systematic, synthesized manner Addresses the intersection of family caregiving and technology Discusses chronic disease management to offset and reduce the need for family caregiving Describes models of caregiver support in work settings Reimagines the delivery of long-term services and supports with novel initiatives

This second edition of *How to Write and Illustrate a Scientific Paper* will help both first-time writers and more experienced authors, in all biological and medical disciplines, to present their results effectively. Whilst retaining the easy-to-read and well-structured approach of the previous edition, it has been broadened to include comprehensive advice on

writing compilation theses for doctoral degrees, and a detailed description of preparing case reports. Illustrations, particularly graphs, are discussed in detail, with poor examples redrawn for comparison. The reader is offered advice on how to present the paper, where and how to submit the manuscript, and finally, how to correct the proofs. Examples of both good and bad writing, selected from actual journal articles, illustrate the author's advice - which has been developed through his extensive teaching experience - in this accessible and informative guide.

How to Write and Illustrate a Scientific Paper CRC Press

Louis P. Hammett Mitchill Professor Emeritus of Chemistry, Columbia University

My interest in linear free energy relationships began when, just out of graduate school, I read in 1924 the article by Bmsted and Pedersen which for the first time reported the existence of such a relationship. That interest continues to be an active one and, to judge merely by the extensive bibliographies contained in the present volume, it is widely shared. To my mind a particularly happy aspect of the existence of linear free energy relationships has been the proof it supplies that one need not suppose that the behavior of nature is hopelessly complicated merely because one cannot find a theoretical reason for supposing it to be otherwise. The effect of a substituent in an organic molecule on rate or equilibrium of reaction involves a fourfold difference between relatively large quantities, a situation which always makes for difficult theory. Yet systematic organic chemistry could hardly have existed were it not true that like changes in structure lead to like changes in reactivity. Linear free energy

relationships constitute the quantitative specialisation of this fundamental

principle, and they stand indeed more in the office of teacher to theory than in that of learner from it.
