A kidnapped psychologist. A murderous warden. There's more to this prison than meets the eye...

Dr. Raine Walsh has a right to be paranoid. The expert psychologist has spent far too much time in the minds of the criminally disturbed, but that's no reason for her to be drugged and thrown into prison. Raine can't remember the crime that got her locked up, and she wonders if her growing paranoia has destroyed her sanity... Raine is determined to solve the mystery of her twisted incarceration, but finding allies is a dangerous game. Some of her fellow prisoners are far from innocent, and a guard confides that he's also been kidnapped and forced to play a role. The problem is that the warden controls the compound with an iron grip. Her only chance of escape could put her and the other inmates in grave danger... The Altruism Effect is the first book in a series of psychological thrillers. If you like gripping suspense, realistic characters, and mind-bending plot twists, then you'll love Kristin Helling's kidnapping thriller. Buy The Altruism Effect to plan your escape today!

Mechanical engineering, an engineering discipline born of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that will cover a broad range of concentrations important to mechanical engineering graduate education and research. We are fortunate to have a distinguished roster of consulting editors, each an expert in one of the areas of concentration. The names of the consulting editors are listed on the front page of the volume. The areas of concentration are applied mechanics, biomechanics, computational mechanics, dynamic systems and control, energetics, mechanics of material, processing, thermal science, and tribology. Professor Leckie, the consulting editor for applied mechanics, and I are pleased to

present this volume of the series: Kinematic and Dynamic Simulation of Multibody Systems: The Real-Time Challenge by Professors Garcia de Jal6n and Bayo. The selection of this volume underscores again the interest of the Mechanical Engineering Series to provide our readers with topical monographs as well as graduate texts. Austin Texas Frederick F. Ling v The first author dedicates this book to the memory of Prof F. Tegerizo (t 1988), who introduced him to kinematics. **Traffic Signal Systems** Packt Publishing Ltd
Pepall's Industrial Organization: Contemporary Theory and Empirical Applications, 5th Edition offers an accessible text in which topics are organized in a manner that motivates and facilitates progression from one chapter to the next. It serves as a complete, but concise, introduction to modern industrial economics. The text uniquely uses the tools of game theory, information economics, contracting issues, and practical examples to examine multiple facets of industrial organization. The fifth edition is more broadly accessible, balancing the tension between making modern industrial analysis accessible while also presenting the formal abstract modeling that gives the analysis its power. The more overtly mathematical content is presented in the Contemporary Industrial Organization text (aimed at the top tier universities) while this Fifth Edition will less mathematical (aimed at a wider range of four-year colleges and state universities).

"Klezmer" is a Yiddish word for professional folk instrumentalist—the flutist, fiddler, and bass player that made brides weep and guests dance at weddings throughout Jewish eastern Europe before the culture was destroyed in the Holocaust, silenced under Stalin, and lost out to assimilation in America. Klezmer music is now experiencing a tremendous new spurt of interest worldwide with both Jews and non-Jews recreating this restless volatile, and vibrant musical culture. Firmly centered in the United States, klezmer has paradoxically moved back across the Atlantic as a distinctly "American" music, played throughout central and eastern Europe, as well as in many other parts of the world. Fiddler on the Move places klezmer music squarely within American music studies, cultural studies, and ethnomusicology. Neither a chronology nor a comprehensive survey, the book describes a variety of approaches and perspectives for coming to terms with the highly diverse array of activities found under the klezmer umbrella. Bringing to his subject the insights of an accomplished ethnomusicologist, Slobin addresses such questions as: How does klezmer overlap with, and differ from, the many other contemporary "heritage" musics based on an assumed connection with a group identity and links to a tradition? How do economics, artistic expression, and the evocation of the past interact in motivating klezmer performers and audiences? In what kinds of environment does klezmer flourish? How do stylistic features such as genre, form, and ornamentation help to define the technique, affect, and aesthetic of klezmer? Featuring a music CD with many of the archival and contemporary recordings discussed in the text, this fascinating study will interest scholars, students, musicians, and music lovers

Questions of morality in exploring alternate realities; goddesses of old, living in modern-day Philippine society; the flesh trade in a dystopic future; four childhood friends, taunting fate by

crossing the line between life and death, and coming back again; a world where justice is immediate, absolute, and therefore deemed perfect—these are but some of the ideas to have sprung from the mind of up-and-coming writer Eliza Victoria. In *A Bottle of Storm Clouds*, Victoria's first compilation of short fiction, her subjects are a mottled bunch; her characters, of all walks of life; her approaches, from all directions. But her stories all boil down to one question: "e;What
