District Nursing Manual of Clinical Procedures F.A. Davis

First manual on Clinical Procedures developed by the faculties of NINE-PGIMER Chandigarh, who are also the subject experts. The procedures have been divided into the 6 major nursing subjects: Nursing Foundations, Medical Surgical Nursing, Mental Health Nursing, Obstetric and Gynecological Nursing, Pediatric Nursing and Community Health Nursing. The contents have been developed as per INC syllabus of undergraduate as well as postgraduate nursing and several new procedures have been added, making it the most comprehensive compendium available so far. The complete book has been developed keeping in mind the relevance of the content in the Indian context. The articulate way of writing strengthened by the use of simple language makes browsing through the book a delightful experience. All the

procedures have been well illustrated with colored diagrams and real-time photographs, explaining the various steps of procedures. The procedures have been divided into Preprocedural, Intraprocedural and Postprocedural steps along with their rationale, emphasizing the sequence and importance of every step. All procedures are substantiated with Points to Remember and Special Considerations boxes to help the students identify and remember the various aspects that need to be taken care of while performing the procedures. Suggested Readings at the end of each procedure are given to aid the students with various reference works for future reference and enhancing their knowledge.

The Art of Nursing Practice Elsevier Health Sciences

Prepared under the auspices of the International Council of Nurses (ICN), this first volume provides a comprehensive overview of the rapidly emerging field of advanced nursing practice. It addresses central issues in the role and practice development that are fundamental to defining and differentiating the nature of this field. Topics include defining the role, role characteristics, scope of practice, education, regulation and research. Obstacles to and facilitators of that role are addressed and include ethical questions arising in the context of practice development. With an international focus, this volume examines international developments in the field, as reflected in country-specific case studies and examples. It offers a valuable resource for advanced practice nurses, educators and administrators at healthcare institutions.

The Future of Nursing explores how

nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency

training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
