**Stroke E-Book** McGraw Hill Professional  
This book is an unparalleled resource on neurologic emergencies. Most books on neurologic emergencies focus on

treatment of a disease after it is diagnosed (such as stroke, subarachnoid hemorrhage, or meningitis). There are but a few books that focus on how to evaluate the patient with a neurologic symptom, before the diagnosis is made. This is the area that frontline providers, including emergency physicians, family physicians, primary care physicians, hospitalists, urgent care physicians, and midlevel providers struggle with. This book is written by clinicians with a clear

understanding of the needs of non-neurologists in the front lines of medicine. The editors are board-certified emergency physicians with fellowship training and expertise in neurologic emergencies. *Neurologic Emergencies* includes these point-of-care-friendly features: Extensive number of algorithms for distinct presenting symptoms Classic neuroimaging findings A concise bullet on what information needs to be conveyed to consultants Reference to relevant national

Springer Publishing Company You have just encountered a possible stroke patient. You ask yourself, what should I do first? How do I know it is a stroke? Is it too late to reverse the damage? How do I do the right things in the right order? This book will help you answer these critical questions. It provides practical advice on the care of stroke patients in a range of acute settings. As new and effective treatments become available, and designated stroke centers

are created, this guidebook will help inform the healthcare professionals responsible for delivering care. The content is arranged in chronological order, covering the things to consider in assessing and treating the patient in the emergency department, the stroke unit, and then on transfer to a rehabilitation facility. All types of stroke are covered. A comprehensive set of appendices contain useful reference information including dosing algorithms,

conversion factors and stroke scales.

favourite companion to clinical neurosciences training and teaching around the world, whilst retaining its role as an invaluable reference guide for physicians and other healthcare professionals working in neurology, general medicine and related specialties. The book continues to reflect the core values essential to the practice of clinical neurology in the 21st-century. The third edition has been extensively revised and updated to take account of the rapid

pace of progress in the neurosciences and patient care. Contemporary neurology has been changed by the COVID-19 pandemic, the climate emergency and the growing inequalities in healthcare resources. The new edition has been extensively revised to reflect these challenges and affords a greater emphasis on management and rehabilitation whilst continuing to reflect the coherence of a text produced from a single, closely-knit, centre of

excellence. Highlights of the new edition include: An updated approach to clinical examination, decision-making and diagnosis New developments in neuroimmunology, pathology and genetics Reflections on the history of our specialty, how the 'neurology method' has evolved and why this remains relevant to contemporary practice. Neuropalliative care Ethical and legal issues in clinical neurology The future direction of research in the

neuroscience and clinical neurology The latest developments in the understanding and management of stroke, movement disorders, epilepsy, cognitive impairment, multiple sclerosis, infections, myelopathy, anterior horn cell disease, disorders of nerve and muscle, neuro-oncology, neurological disorders of hearing, balance and vision and the neurological care of critical illness, sleep, neuropsychiatry, pain, autonomic and urological disorders. An emphasis on

treatment and rehabilitation of the person with a neurological disease. The new edition marks a significant transition to reflect contemporary neurological practice during uncertain times. It mirrors the enormous changes in investigation, diagnosis and treatment that have occurred in recent years whilst maintaining the underlying principle that we do not treat diagnoses but, rather, we care for people affected by neurological disease.
