For more than thirty years the senior author has been trying to learn algebraic geometry. In the process he discovered that many of the classic textbooks in algebraic geometry require substantial knowledge of cohomology, homological algebra, and sheaf theory. In an attempt to demystify these abstract concepts and facilitate understanding for a new generation of mathematicians, he along with co-author wrote this book for an audience who is familiar with basic concepts of linear and abstract algebra, but who never has had any exposure to the algebraic geometry or homological algebra. As such this book consists of two parts. The first part gives a crash-course on the homological and cohomological aspects of algebraic topology, with a bias in favor of cohomology. The second part is devoted to presheaves, sheaves, Čech

cohomology, derived functors, sheaf cohomology, and spectral sequences. All important concepts are intuitively motivated and the associated proofs of the quintessential theorems are presented in detail rarely found in the standard texts.

The thirty-first edition of this indispensable guide to capital taxes encompasses fully consolidated and annotated legislation in the areas of stamp duty, capital acquisitions tax and local property tax. Changes brought about by the Finance Act 2022 are incorporated and all relevant information issued by the Revenue Commissioners is also referenced. Split into three sections, the book covers each Act and SI that is relevant to stamp duty, capital acquisitions tax and local property tax. The legislation is accompanied by easy-to-follow notes which set out definitions, amendments, cross-references, e-Briefs, Tax Briefings, former enactments and relevant case law. This is the authoritative guide to Irish capital taxes and it is an essential manual for tax advisers, tax lawyers, accountants and financial institutions who must remain up to date in these areas of tax. This title is included in Bloomsbury Professional's Irish Tax online service.

Reinforce your understanding of radiographic positioning and procedures with this practical workbook! Corresponding to the content in Merrill's Atlas of Radiographic Positioning & Procedures, 15th Edition, this workbook helps you review and

practice essential radiographic terminology, anatomy, and positioning concepts. Exercises include multiple-choice and matching questions, imaging evaluation, and more. Written by the textbook's authors, this workbook prepares you for success on the ARRT certification exam and in clinical radiography practice. Anatomy exercises reinforce your understanding with multiple-choice, matching, and short-answer questions, labeling and identification diagrams, and crossword puzzles. Positioning exercises include multiple-choice, matching, short-answer, true/false, and fill-in-the blank questions, labeling and identification diagrams, and comparisons of standard radiographic projections. Exercises on identifying errors in radiographs prepare you to evaluate radiographs in clinical situations. Pathology exercises help you understand which projections will best demonstrate various pathologies. Self-tests at the end of each chapter include review questions enabling you to assess your comprehension and measure your own progress. NEW! Updated drawings and radiographic images reflect the content updates in the Merrill's Atlas of Radiographic Positioning & Procedures, 15th Edition text. NEW exercises reflect the latest changes to the American Registry of Radiologic Technologists (ARRT) examination.

This book covers most of the known results on reducibility of polynomials over arbitrary fields, algebraically closed fields and finitely generated fields. Results valid only over finite fields, local fields or the rational field are not covered here, but several theorems on reducibility of polynomials over number fields that are either totally real or complex multiplication fields are included. Some of these results are based on recent work of E. Bombieri and U. Zannier (presented here by Zannier in an appendix). The book also treats other subjects like Ritt's theory of

composition of polynomials, and properties of the Mahler measure, and it concludes with a bibliography of over 300 items. This unique work will be a necessary resource for all number theorists and researchers in related fields.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

This is the first description of Goemai, a West Chadic language of Nigeria. Goemai is spoken in a language contact area, and this contact has shaped Goemai grammar to the extent that it can be considered a fairly untypical Chadic language. The grammar presents the structure of the present-day language, relates it to its diachronic sources, and adds a semantic perspective to the description.

Get the most out of your Merrill's Radiographic Atlas with the Workbook for Merrill's Atlas of Radiographic Positioning and Procedures, 13th Edition. Providing plenty of review and practice of the concepts found in the atlas, this workbook contains a wide variety of exercises — including labeling, anatomy identification, short answer, multiple-choice, matching, true and false, fill-in-the-blank, error identification, and more — that focus on the essential terminology, anatomy, and positioning information you need to pass the ARRT exam and thrive in the clinical environment.

Correlation with main Merrill's Radiographic Atlas features exercises that support the digital positioning content in the atlas.

Wide variety of exercises holds user's interest and provides a variety of interaction with the content. Exercises on identifying errors on radiographs prepare users to evaluate radiographs in clinical situations. Anatomy and positioning exercises provide balanced coverage of both topics. Abundance of labeling exercises ensures users recognize anatomical structures on actual radiographs. Comprehensive self-test at the end of each chapter enable users to accurately gauge their comprehension of the material and measure their own progress. Pathology exercises helps users understand which projections will best demonstrate various pathologies. NEW! New images reflect all the content updates in the main Merrill's text. NEW! Detailed review exercises that cover osteology, anatomy, physiology, arthrology and radiographic examinations NEW! Additional images for identifying essential projections
