SHILOH ASHER

Enciclopedia universal ilustrada europeo-
americana Espasa Calpe Mexicana, S.A.
This book explores a specific aspect of

modern parliamentarism: its ability to produce and organise political knowledge. The book argues that the very meaning of modern parliamentarism cannot properly be understood without considering the cognitive value which is inherent in the

representative function discharged by parliaments, vis-a-vis the political community. It does so by studying the 'encyclopaedic patterns' underlying modern parliamentarism. Exploring the concept from ancient times to modernity, it addresses the fundamental question of the relationship between knowledge and democratic decision-making. This is a truly innovative book; challenging, provocative and asking crucial questions of how parliaments work and legislate.

Enciclopedia universal ilustrada europeo-americana. suplemento anual 1989-1990 Cambridge University Press

This magisterial annotated bibliography of the earliest mathematical works to be printed in the New World challenges

long-held assumptions about the earliest examples of American mathematical endeavor. Bruce Stanley Burdick brings together mathematical writings from Mexico, Lima, and the English colonies of Massachusetts, Pennsylvania, and New York. The book provides important information such as author, printer, place of publication, and location of original copies of each of the works discussed. Burdick's exhaustive research has unearthed numerous examples of books not previously cataloged as mathematical. While it was thought that no mathematical writings in English were printed in the Americas before 1703, Burdick gives scholars one of their first chances to discover Jacob Taylor's 1697 *Tenebrae*, a treatise on solving triangles and other figures using basic

trigonometry. He also goes beyond the English language to discuss works in Spanish and Latin, such as Alonso de la Vera Cruz's 1554 logic text, the *Recognitio Summularum*; a book on astrology by Enrico Martínez; books on the nature of comets by Carlos de Sigüenza y Góngora and Eusebio Francisco Kino; and a 1676 almanac by Feliciano Ruiz, the first woman to produce a mathematical work in the Americas. Those fascinated by mathematics, its history, and its culture will note with interest that many of these works, including all of the earliest ones, are from Mexico, not from what is now the United States. As such, the book will challenge us to rethink the history of mathematics on the American continents.
