section in which students can work out practice problems on the spot. Rapid Practice exercises follow each main concept, allowing students to review even when their study time is limited or frequently interrupted. Test Tips enhance comprehension and improve students' test-taking skills and comfort level. Selected Mnemonics are supplied to facilitate memorization and conserve learning time. Red Arrow Alerts call attention to critical math concepts and patient-safety theory as well as to key nursing practice issues. FAQs and Answers are derived from students' actual classroom questions. They are particularly helpful to students who are studying outside of a traditional classroom environment. Ask Yourself questions help students comprehend

and synthesize content. Communication boxes, which present sample nurse-patient and nurse-prescriber dialogues, illustrate clinical applications of medication administration. Cultural boxes describe selected math-notation and medication-related cultural practices. Clinical Relevance boxes show how abstract concepts, such as legal issues, apply to everyday clinical practice. Website addresses and other useful references are provided where applicable. Two chapter finals are included at the end of each chapter, one multiple-choice format and one traditional format, with answers provided in the back of the book. Two comprehensive finals, one using an NCLEX examination-style multiple-choice format and one following a traditional

format, test the major concepts covered in the text and offer an opportunity for additional practice. The essays in this book explore some of the important areas of the long boundary between economics and intellectually adjacent disciplines, by placing the neoclassical paradigm in the broader context of these other social sciences. Written by economists and philosophers, these papers examine the themes that complicate the conventional economist's view of the world and thereby provide a notably more complex (and humane) subject than the traditional homo economicus. In analyzing these "imperialist forays" from the field and "territorial invasions" upon it, the contributors seek to understand what it is that separates economics from the other kinds of inquiry and to expound upon the actual limits of economics. They also look at the shifts

and changes in the boundaries of what is considered economics.
