This book examines the conceptual development of control in the literature of both management and accounting disciplines, from 1900 to 1980. In order to portray the development of control concepts over time, the chapters are organized into sections relating to the schools of thought from which they emanated and a model of control is constructed to represent each group of concepts and their hypothesised inter-relationships. Having traced the development of control models a comparative analysis of historical development in the two streams of management and accounting literature is undertaken. This analysis reveals a pronounced lag of accounting development behind that of management literature. The reasons for this are then discussed.

The measurement methods used in financial accounting affect our perception of the value and performance of businesses by determining the amount of reported profit or loss and the resources of the business. Thus, measurement affects shareholders and other stakeholders in the business. It has even been suggested that the world financial crisis of 2007-2010 was

partly due to the mis-measurement of financial instruments. In this book, Geoffrey Whittington provides a unique survey of the theory and practice of measurement in financial accounts. It seeks to define and illustrate alternative methods, using simple numerical examples, and to analyse their theoretical properties. Also, it summarises extensive empirical evidence and the historical development of ideas and practice. It is essential reading for advanced undergraduate and postgraduate students studying financial accounting, as well as practitioners and policy-makers concerned with accounting standards.

This book confirms and builds on the Temporal Single-System Interpretation's demonstration of Marx's consistency.
