A change is coming. By 2050, the world's 65-and-older population will double, and the 85 and older population will mushroom fivefold. As the number of older adults surges, so too will the number of medication management challenges pharmacists and other health care providers experience. For the geriatric population, complex cases are often the norm, and providing safe and effective care can mean considering assessments of function and cognition, contacting multiple prescribers, and understanding a patient's history, beliefs, and care-giving situation before making therapeutic decisions. *Fundamentals of Geriatric Pharmacotherapy: An Evidence-Based Approach* gives practitioners the information they need to improve outcomes and personalize care for elderly patients. Section 1 explores important foundational concepts such as social and behavioral issues, ethical considerations, biomedical principles of aging, geriatric assessment, and polypharmacy. Section 2 covers common disease states in aging adults, providing evidence-based treatment information as well as helpful tips for minimizing common problems and contending with clinical controversies. Particular attention is given to how treatment can differ along the spectrum of active elderly to frail elderly patients. Useful features throughout the book guide practitioners in navigating the maze of information required when caring for an older patient. These include: Summarized treatment guidelines. Reviews of the evidence-base. Special focus on recommendations for frail elderly. At least one full case study, or more, in each chapter. Clinical Pearls. Key Points highlight important information in each chapter. Key terms and definitions. The demands of an aging population mean a greater understanding of geriatric pharmacotherapy will soon be essential for all health care providers. *Fundamentals of Geriatric Pharmacotherapy* ensures that you'll have the information needed to respond appropriately.

Where possible the information is summarized in tables or presented in outline format.

Case Files Neurology, Third Edition McGraw Hill Professional

Pharmacists face ethical choices constantly -- sometimes dramatic life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide, conscientious refusal, pain management, equitable distribution of drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first new chapter presents a new model for analyzing cases, while the second focuses on the ethics of new drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet-based pharmacies.
