This book is an unparalleled resource on neurologic emergencies. Most books on neurologic emergencies focus on treatment of a disease after it is diagnosed (such as stroke, subarachnoid hemorrhage, or meningitis). There are but a few books that focus on how to evaluate the patient with a neurologic symptom, before the diagnosis is made. This is the area that frontline providers, including emergency physicians, family physicians, primary care physicians, hospitalists, urgent care physicians, and midlevel providers struggle with. This book is written by clinicians with a clear understanding of the needs of non-neurologists in the front lines of medicine. The editors are board-certified emergency physicians with fellowship training and expertise in neurologic emergencies. Neurologic Emergencies includes these point-of-care-friendly features: Extensive number of algorithms for distinct presenting symptoms Classic neuroimaging findings A concise bullet on what information needs to be conveyed to consultants Reference to relevant national guidelines where applicable Common chapter format to facilitate quick look-up

Apheresis refers to an extracorporeal therapy which aims at removing pathological constituents from the patients' blood. Due to the development of new techniques as well as the discovery of novel autoimmune antibodies, it is increasingly recognized as an important therapeutic option for a variety of autoimmune-mediated neurological disorders, including multiple sclerosis, myasthenia gravis, autoimmune encephalitis, Guillain-Barré syndrome, and many others. Therapeutic plasma exchange (TPE) constitutes the standard method of apheresis for most indications, while immunoadsorption (IA) offers a more specific, low-risk alternative. Both methods aim at removing auto-antibodies from the blood. Evidence for most neurological diseases is still low. Interestingly, more recent developments suggest that apheresis is not limited to the removal of autoantibodies but may also be useful in neurodegenerative and possibly even in acute vascular disorders.
