<i>Mercedes-Benz Buyer's Guide</i> Akashic Books Hot and Smoky Shrimp Tacos, Roasted Wild Mushroom Tacos with Queso Fresco, Fire-Roasted Corn and Poblano Chile Tacos-these are a few of the most taste-tempting tacos you'll ever put in your mouth. And what to top them with-of course, it must be the perfect salsa! <i>The Kids' Holiday Baking Book</i> Routledge SUVs have taken over America's roads. Ad campaigns promote them as safer and "greener" than ordinary cars and easy to handle in bad weather. But very little about the SUV's image is accurate. They poorly protect occupants and inflict horrific damage in crashes, they guzzle gasoline, and they are hard to control. Keith Bradsher has been at the forefront in reporting the calamitous safety and environmental record of SUVs, including the notorious Ford-Firestone rollover controversy. In <i>High and Mighty</i> , he traces the checkered history of SUVs, showing how they came to be classified not as passenger cars but as light trucks, which are subject to less strict regulations on safety, gas mileage, and air pollution. He makes a powerful case that these vehicles are even worse than we suspect--for their occupants, for other motorists, for pedestrians and for the planet itself. In the tradition of <i>Unsafe at Any Speed</i> and <i>Fast Food Nation</i> , Bradsher's book is a damning exposé of an industry that puts us all at risk, whether we recognize it or not. <i>Look-Alikes Jr.</i> St. Martin's Griffin Survey of mathematics highlights the power of mathematics as a deductive discipline. The course covers four topics in mathematics. Each topic will build upon the next. The use of deductive arguments, both in formal and natural languages, will be emphasized. Topics include Set Theory, Cantor's Diagonalization Argument, countable and uncountable infinite, mathematical induction, cardinal numbers, one to one correspondence, Venn diagrams, sequences, applications in sequences, rational and irrational numbers, geometric proofs involving similar triangles, area, pythagorean theorem, trigonometry. Algebraic proofs involving the quadratic formula, irrationality of the number Phi, mathematical induction, proofs with sequences, proof by contradiction, fibonacci sequence and the golden ratio, continued fractions, fractals with an emphasis on pattern building, sequences, length and area. <b>Salsas and Tacos</b> Mercedes-Benz Technical Companion This book will inspire and equip parents to help their hurting teens. As the 1990s began, competition from rivals was threatening the Mercedes-Benz marque's position at the top of the automotive tree. Through a combination of audacious diversification and sometimes less-than-successful cost-cutting, Mercedes began a turnaround that would not achieve final success until the middle of the following decade. This book charts these turbulent years when the marque struggled to come to terms with a changing world.

*Confessions: The Private School Murders - FREE PREVIEW (The First 15 Chapters)* Thomas Nelson  
Emphasizing sustainability, balance, and the natural, green dominates our thinking about ecology like no other color. What about the catastrophic, the disruptive, the inaccessible, and the excessive? What of the ocean's turbulence, the fecundity of excrement, the solitude of an iceberg, multihued contaminations? Prismatic Ecology moves beyond the accustomed green readings of ecotheory and maps a colorful world of ecological possibility. In a series of linked essays that span place, time, and discipline, Jeffrey Jerome Cohen brings together writers who illustrate the vibrant worlds formed by colors. Organized by the structure of a prism, each chapter explores the coming into existence of nonanthropocentric ecologies. "Red" engages sites of animal violence, apocalyptic emergence, and activism; "Maroon" follows the aurora borealis to the far North and beholds in its shimmering alternative modes of world composition; "Chartreuse" is a meditation on postsustainability and possibility within sublime excess; "Grey" is the color of the undead; "Ultraviolet" is a potentially lethal force that opens vistas beyond humanly known nature.

Featuring established and emerging scholars from varying disciplines, this volume presents a collaborative imagining of what a more-than-green ecology offers. While highlighting critical approaches not yet common within ecotheory, the contributions remain diverse and cover a range of topics including materiality, the inhuman, and the agency of objects. By way of color, Cohen guides readers through a reflection of an essentially complex and disordered universe and demonstrates the spectrum as an unfinishable totality, always in excess of what a human perceives. Ruth Galm's spare, poetic debut novel, set in the American West of early Joan Didion, traces the drifting path of a young woman as she skirts the law and her own oppressive anxiety. "Into the Valley" opens on the day in July 1967 when B. decides to pass her first counterfeit check and flee San Francisco for the Central Valley. Caught between generations and unmarried at 30, B. doesn't understand the new counterculture youths. She likes the dresses and kid gloves of her mother's

generation, but doesn't fit into that world either. B. is beset by a disintegrative anxiety she calls the carsickness, and the only relief comes in handling illicit checks and driving endlessly through the valley. As she travels the bare, anonymous landscape, meeting an array of other characters: an alcoholic professor, a bohemian teenage girl, a criminal admirer. B.'s flight becomes that of a woman unraveling, a person lost between who she is and who she cannot yet be."
