Computer Organization and Design

Jones & Bartlett Learning

In the last years many new parallel algorithms were constructed which have no relation with classical sequential algorithms. They are published only in research reports, journals or proceedings spread all over the world. There are only few books devoted to the design of efficient parallel algorithms - this is one of the best of them. It has two goals: to familiarize the reader with "classical" parallel algorithms and to provide practical insight into how efficient algorithms are constructed for pipelined and array processors, multiprocessors and multicomputers
