Information operations (IO) creates effects in and through the information environment. IO optimizes the information element of combat power and supports and enhances all other elements in order to gain an operational advantage over an enemy or adversary. These effects are intended to influence, disrupt, corrupt or usurp enemy or adversary decision

making and everything that enables it, while enabling and protecting friendly decision making. Because IO's central focus is affecting decision making and, by extension, the will to fight, commanders personally ensure IO is integrated into operations from the start

British garden designer John Brookes focuses on eleven basic ideas in garden design--setting, shape, direction, levels, enclosure, entrance, surface, structure, planting, water, and style--explaining the vital elements of each and presenting exceptionally good photos from around the world to clarify the concepts. (Unfortunately, their locations are not consistently identified.) His approach is

practical and clear yet sophisticated, and environmental sensitivity is emphasized throughout. Annotation copyrighted by Book News, Inc., Portland, OR.

The most comprehensive reference on fluorescent nanodiamond physical and chemical properties and contemporary

applications Fluorescent nanodiamonds (FNDs) have drawn a great deal of attention over the past several years, and their applications and development potential are proving to be manifold and vast. The first and only book of its kind, Fluorescent Nanodiamonds is a comprehensive guide to the basic science and technical information needed to fully understand the fundamentals of FNDs and their potential applications across an array of domains. In demonstrating the importance of FNDs in biological applications, the authors bring together all relevant chemistry, physics, materials science and biology. Nanodiamonds are produced by powerful cataclysmic events such as explosions, volcanic eruptions and meteorite impacts. They also can be created in the lab by high-pressure high-temperature treatment of graphite or detonating an explosive in a reactor vessel. A single imperfection can give a nanodiamond a specific, isolated color center which allows it to function as a single, trapped atom. Much smaller than the thickness of a human hair, a nanodiamond can have a huge surface area that allows it to bond with a variety of

other materials. Because of their non-toxicity, nanodiamonds may be useful in biomedical applications, such as drug delivery and gene therapy. The most comprehensive reference on a topic of rapidly increasing interest among academic and industrial researchers across an array of fields Includes numerous case studies and practical examples from many areas of research and industrial applications, as well as fascinating and instructive historical perspectives Each chapter addresses, in-depth, a single integral topic including the fundamental properties, synthesis, mechanisms and functionalisation of FNDs The first book published by the key patent holder with his research group in the field of FNDs Fluorescent Nanodiamonds is an important working resource for a broad range of scientists and engineers in industry and academia. It will also be a welcome reference for instructors in chemistry, physics, materials science, biology and related fields.

The book is intended for students in engineering school or university, young

engineers or newcomers in the automotive industry or aeronautics. The objective is to describe in a simple and clear way the problem of energy and motorization for the automobile, helicopters or airplanes. The front-end treatment of these industrial sectors makes it possible to analyze in an original way the similarities and differences of these different means of transport. For this, and based on current technologies and tomorrow, it specifically describes the problem of the energy requirement of cars and aircraft. The result is a search for an ideal motorization associated with the behavior of these different means of transport followed by the analysis of the performances of the various types of engines by covering gas turbines, internal combustion engines and electric motors. Transmission elements such as aerospace gearboxes or gearboxes are described as well as a chapter on energy storage means and their performance including batteries, supercapacitors, inertial or pneumatic storage, hydrogen or fuels from fossil fuels. A final chapter shows the interest and prospects of energy hybridization and electrification for the progressive

replacement of fossil fuels. Beyond the technological descriptions, the book focuses on proposing basic sizing rules in order to justify certain performances and to give the reader the means to appropriate the basic know-how of these industrial sectors.

Created through an extensive “student-tested, faculty-approved” review process with student and faculty input, PFIN3 is an engaging and accessible solution designed to accommodate the diverse lifestyles of today’s learners at a value-based price. PFIN3 continues to provide the personal finance content students need in a concise, approachable format that appeals to today’s busy learner. Shorter chapters, an inviting design, engaging visuals, and removable Chapter-in-Review cards work with numerous online student study tools to reinforce the book’s solid life-cycle approach to personal financial management. Students study financial plans, assets, credit, insurance, investment, and retirement as individuals and families progress through life. Numerous real-life examples and step-by-

step learning features help ensure that students master course material and today’s critical financial tools and technology. This edition highlights the most recent current statistical information and laws regarding topics such as taxes, health care, credit, banking, and estate planning to equip students with contemporary, practical skills. All online tools, including Excel worksheets that correspond to the book’s exercises and Kiplinger videos with money management and investing advice, are easily accessed through PFIN3’s CourseMate website. Time-saving CengageNOW online course management and Aplia™ for Finance automated homework solutions further ensure that students develop today’s most important personal finance skills. Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among

present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider the [Fresh from the Farm 6pk](#) William Morrow & Company
Democracy and Other Neoliberal Fantasies is an impassioned call for the realization of a progressive left politics in the United States. Through an assessment of the ideologies underlying contemporary political culture, Jodi Dean takes the left to task for its capitulations to conservatives and its failure to take responsibility for the extensive neoliberalization implemented during the Clinton presidency. She argues that the left's ability to develop and defend a collective vision of equality and solidarity has been undermined by the ascendance of "communicative capitalism," a constellation of consumerism, the privileging of the self over group interests, and the embrace of the language of victimization. As Dean explains, communicative capitalism is enabled and exacerbated by the Web and other networked communications media,

which reduce political energies to the registration of opinion and the transmission of feelings. The result is a psychotic politics where certainty displaces credibility and the circulation of intense feeling trumps the exchange of reason. Dean's critique ranges from her argument that the term democracy has become a meaningless cipher invoked by the left and right alike to an analysis of the fantasy of free trade underlying neoliberalism, and from an examination of new theories of sovereignty advanced by politicians and left academics to a look at the changing meanings of "evil" in the speeches of U.S. presidents since the mid-twentieth century. She emphasizes the futility of a politics enacted by individuals determined not to offend anyone, and she examines questions of truth, knowledge, and power in relation to 9/11 conspiracy theories. Dean insists that any reestablishment of a vital and purposeful left politics will require shedding the mantle of victimization, confronting the marriage of neoliberalism and democracy, and mobilizing different terms to represent political strategies and goals. This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris. Mendoza the Jew combines a graphic history with primary documentation and contextual information to explore issues of nationalism, identity, culture, and historical methodology through the life story of Daniel Mendoza. Mendoza was a poor Sephardic Jew from East London who became the boxing champion of Britain in 1789. As a Jew with limited means and a foreign-sounding name, Mendoza was an unlikely symbol of what many Britons considered to be their very own "national" sport.

Techniques pour l'Automobile et l'Industrie 'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New Yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they

gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these,

I will always love and remember Africa, the home of my birth and must respect her cultures and traditions as an AFRICAN AUTHOR.

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading

and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.
