*Evaluating e-
Participation* IGI Global
Comparative E-

Government examines the impact of information and communication technology (ICT) on governments throughout the world. It focuses on the adoption of e-

government both by comparing different countries, and by focusing on individual countries and the success and challenges that they have faced. With 32 chapters from leading e-government scholars and practitioners from around the world, there is representation of developing and developed countries and their different stages of e-government adoption. Part I compares the adoption of e-government in two or more countries. The purpose of these chapters is to discern the development of e-government by comparing different countries and their individual experiences. Part II provides a more in-depth focus on case studies of e-

government adoption in select countries. Part III, the last part of the book, examines emerging innovations and technologies in the adoption of e-government in different countries. Some of the emerging technologies are the new social media movement, the development of e-participation, interoperability, and geographic information systems (GIS). Compendium of Innovative E-government Practices IGI Global This analysis of how the ability to participate in society online affects political and economic opportunity finds that technology use matters in wages and income and civic participation and voting. Just as

education has promoted democracy and economic growth, the Internet has the potential to benefit society as a whole. Digital citizenship, or the ability to participate in society online, promotes social inclusion. But statistics show that significant segments of the population are still excluded from digital citizenship. The authors of this book define digital citizens as those who are online daily. By focusing on frequent use, they reconceptualize debates about the digital divide to include both the means and the skills to participate online. They offer new evidence (drawn from recent national opinion surveys and Current Population Surveys)

that technology use matters for wages and income, and for civic engagement and voting. Digital Citizenship examines three aspects of participation in society online: economic opportunity, democratic participation, and inclusion in prevailing forms of communication. The authors find that Internet use at work increases wages, with less-educated and minority workers receiving the greatest benefit, and that Internet use is significantly related to political participation, especially among the young. The authors examine in detail the gaps in technological access among minorities and the poor and predict that this

digital inequality is not likely to disappear in the near future. Public policy, they argue, must address educational and technological disparities if we are to achieve full participation and citizenship in the twenty-first century.

Evaluating Public Participation in Policy Making

IGI Global
To address the challenges in rural areas the support for rural development with participatory approaches has a long tradition in EU funding programmes. One corresponding instrument is LEADER, which is a place-based, participatory approach to bring together public, private and civil society organisations. Within LEADER the different stakeholders

come together in a Local Action Group (LAG) as a type of a public-private partnership. Those groups collaborate on the basis of an integrated local development strategy (LDS) and administer own budgets to support projects. Although there are usually broad participation opportunities, some observations in literature mention problems like that only the “usual suspects” (age over 40, higher education, male) get involved in such participations. It is a well established instrument to ask the participants of such processes about their view of the cooperation within their LEADER decision making body to examine their

satisfaction with decision making procedures or their estimations about the output quality. But for some research questions an external view would be more appropriate. Thus, this contribution brings into focus the estimations of non-participants to examine their opinions about possibilities for participation or the legitimacy of decision-making within LEADER-processes. To collect this information an online-survey is used. Therefore, in eight LEADER-Regions about 50-100 non-participants (per region) got e-mail invitations for this survey in four different federal states in Germany. The “non-participants” were defined as persons who are neither members of

the decision making body nor beneficiaries of the LEADER-projects. Respondents come from municipalities as well as from different associations of the civil society. This presentation contains preliminary results concerning the external views of the work of LEADER to gain insights about the possibilities of participation and possible obstacles to participate.

The Effects of Technology and Institutions on E-Participation Routledge

The development of information-based societies worldwide is now impacting public organizations and their delivery of services to citizens. Systems Thinking and E-Participation: ICT in the

Governance of Society provides a systemic-based inquiry platform to explore boundaries, limits, and advantages of information and communication technology use in the public decision making processes. With theoretical and practical contributions, this publication examines the impact of governmental technologies useful to those involved with politics, sociology, and information systems. *Citizen Participation in Planning* IGI Global 131 selected references to English-language books and journal articles published during 1930-1972. Books and articles arranged alphabetically by authors in separate sections. Entry gives bibliographical

information. No index. **Evaluating Citizen Participation, Rural and Urban Community Development** Penn State Press Internationally renowned facilitator and public participation consultant James L. Creighton offers a practical guide to designing and facilitating public participation of the public in environmental and public policy decision making. Written for government officials, public and community leaders, and professional facilitators, *The Public Participation Handbook* is a toolkit for designing a participation process, selecting techniques to encourage participation, facilitating successful

public meetings, working with the media, and evaluating the program. The book is also filled with practical advice, checklists, worksheets, and illustrative examples.

E-Government Implementation and Practice in Developing Countries MIT Press

The future of government as we know it is being shaped by the quickly-advancing progression of information and communication technology (ICT) eGovernment systems. eGov presents major challenges and advantages for policy makers and the public alike.

A Framework for Ensuring Compliance with Public Participation Guidelines Under the National

Environmental Policy Act in Rural Community Environmental Decision Making Palgrave Macmillan

"This book focuses on the issues and challenges involving adoption and implementation of online civic engagement initiatives globally and will serve as a valuable guide to governments in their efforts to enable active citizen participation"-- Provided by publisher.

People's participation has begun to influence the practice of development substantially. This study provides an interpretation of how participation occurs, uses case studies to highlight various approaches, and develops elements of a strategy and a methodology.

Engaging Citizens in Policy Making OECD

Publishing

Governments fail to provide the public goods needed for development when its leaders knowingly and deliberately ignore sound technical advice or are unable to follow it, despite the best of intentions, because of political constraints. This report focuses on two forces—citizen engagement and

transparency—that hold the key to solving government failures by shaping how political markets function. Citizens are not only queueing at voting booths, but are also taking to the streets and using diverse media to pressure, sanction and select the leaders who wield power within government, including by entering as contenders for leadership. This political engagement can function in highly nuanced ways within the same formal institutional context and across the political spectrum, from autocracies to democracies. Unhealthy political engagement, when leaders are selected and sanctioned on the basis of their provision

of private benefits rather than public goods, gives rise to government failures. The solutions to these failures lie in fostering healthy political engagement within any institutional context, and not in circumventing or suppressing it. Transparency, which is citizen access to publicly available information about the actions of those in government, and the consequences of these actions, can play a crucial role by nourishing political engagement.

Effects of E-governance and E-participation in Autocratic Regimes on Public-service-access-equality Between Urban and Rural Areas
John Wiley & Sons
This book examines

the transformations of rural society and economy in the UK and US during the last half-century, and explores the significance of these trends and changes for community sustainability, quality of life and the environment. While both the UK and US are highly urbanised, rural people and communities continue to contribute to national identity, economic development and social solidarity, as well as to environmental quality. Contributors explore the degree to which rural people exhibit agency and autonomy, rather than being merely passive in the face of exogenous forces of change in a globalised world. They also illuminate very different policy

approaches to rural policy in two advanced capitalist societies often thought to be similar, and show how fundamental differences in rural policy approaches of the US and the UK are based on different social ideologies and values that shape policies relating to rural areas. This book will help to stimulate transatlantic dialogue on rural scholarship and rural policy analysis, while also contributing to theory and policy development. It will be of interest to researchers, students and everyone involved in the policy and practice of rural development.

Active Citizen Participation in E-Government: A Global Perspective Routledge

"In this book Pragati Rawat and John C. Morris identify and evaluate the impact of factors that can help explain the difference in e-participation, public participation using information and communication technology, in different countries. While cross-sectional studies have been covered, few have taken an in-depth look at cross-national studies. This book attempts to fill the gap using quantitative panel data to explore the influence of technology and institutions, and the impact of their complex relationships in a mediation and moderation analysis, on e-participation. The current study reviews the scholarly work in the field of "offline" and "online

participation" to identify a set of antecedents that influence e-participation. A conceptual framework is developed, supported by the theories from the public policy and socio-technical premise. The authors utilize secondary data, primarily from the UN and World Economic Forum, for 143 countries from three waves of surveys to measure the dependent and explanatory variables. The panel data is statistically analyzed and findings reveal the role of technology as a mediator as well as a moderator for institutions' impact on e-participation. The Effects of Technology and Institutions on E-Participation provides a

groundbreaking country-level analysis that will appeal to academics and students of e-government and Digital Government, Public Policy, Public Administration, Public Sector Innovation, and Public Participation"-- *Research Anthology on Citizen Engagement and Activism for Social Change* Edward Elgar Publishing
This book constitutes the refereed proceedings of the First International Conference on eParticipation, ePart 2009 held in Linz, Austria in August/September 2009. The 16 revised full papers were carefully reviewed and selected from numerous submissions. The papers consider future multi-

disciplinary research direction, examine the potential contribution of social networking sites to political engagement, provide evaluation frameworks for both eParticipation policy and specific projects, and those that describe emerging tools and techniques with which to conduct and analyse eParticipation.

Rural Transformations and Rural Policies in the US and UK

International Labour Organization

This down-to-earth book is aimed at Third World development staff involved in working with the rural poor and draws on the author's own field experience in Africa and Asia. The book is also relevant to non-field staff and, indeed, students of

development generally, who want to understand what participatory development is, how it differs from the more conservative process of simply trying to involve people in already decided development projects, and the practicalities of how a non-government organisation (NGO) can go about its work without taking over and manipulating the local people. People First presents a coherent methodology for achieving development based on principles of conscientisation, local control, co-operation and self-reliance. It emphasises the importance of women participating fully, and of getting the economics of a project right, if it is to be of

real benefit to local people and successfully sustained. The author also believed that field experience and theoretical understanding must be integrated so that change agents and development workers can situate their work in an awareness of both the nature of poverty and competing views of the development process. Conscious of the frequent co-option of the idea of participation by official development agencies, and of the other pitfalls that participatory development can run into, the author provides a hard-headed and practical education about the role of change agents; their recruitment training and support;

how to get started; working with groups; handling relations with government officials and local power holders; and a full range of other relevant issues.

Handbook of Research on E-Government in Emerging Economies: Adoption, E-Participation, and Legal Frameworks

World Bank Publications

This book highlights the rightful role of citizens as per the constitution of the country for participation in Governance of a smart city using electronic means such as high speed fiber optic networks, the internet, and mobile computing as well as Internet of Things that have the

ability to transform the dominant role of citizens and technology in smart cities. These technologies can transform the way in which business is conducted, the interaction of interface with citizens and academic institutions, and improve interactions between business, industry, and city government.

Electronic Government and Electronic Participation Springer

"The main objective of developing the UN/DESA Compendium of Innovative E-government Practices as an ongoing project is to create a venue for promoting innovative e-government solutions, services and products developed and yet to be developed by

governments. The Compendium also enables South- South and North-South information-sharing of their respective experiences and innovative practices. In both cases, the focus is on hastening innovation and creating public value for the citizenry."-- Provided by publisher. *e-Governance for Development* IOS Press

There is a widely acknowledged evaluation gap in the field of e-participation practice and research, a lack of systematic evaluation with regard to process organization, outcome and impacts. This book addresses the state of the art of e-participation research and the existing evaluation gap by reviewing various

evaluation approaches and providing a multidisciplinary concept for evaluating the output, outcome and impact of citizen participation via the Internet as well as via traditional media. It offers new knowledge based on empirical results of its application (tailored to different forms and levels of e-participation) in an international comparative perspective. The book will advance the academic study and practical application of e-participation through fresh insights, largely drawing on theoretical arguments and empirical research results gained in the European collaborative project "e2democracy". It applies the same

research instruments to a set of similar citizen participation processes in seven local communities in three countries (Austria, Germany and Spain). The generic evaluation framework has been tailored to a tested toolset, and the presentation and

discussion of related evaluation results aims at clarifying to what extent these tools can be applied to other consultation and collaboration processes, making the book of interest to policymakers and scholars alike.
