This book bridges the

gap between theory and practice. It provides fundamental information on heterogeneous catalysis and the practicalities of the catalysts and processes used in producing ammonia, hydrogen and methanol via hydrocarbon steam reforming. It also covers the oxidation reactions in making formaldehyde from methanol, nitric acid from ammonia and sulphuric acid from sulphur dioxide. Designed for use in the chemical industry and by those in teaching, research and the study of industrial catalysts and catalytic processes. Students will also find this book extremely useful for obtaining practical information which is

not available in more conventional textbooks.

Conference on the

Conservation of

Earthen Architecture

was held in Las Cruces, New Mexico.

Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that

focused on the future, the application of modern technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

The Leading Integrated
Chemical Process

Design Guide: Now

with New Problems,

New Projects, and More

More than ever,

effective design is the

focal point of sound

chemical engineering.

Analysis, Synthesis,

and Design of

Chemical Processes,

Third Edition, presents

design as a creative

process that integrates

both the big picture

and the small

details—and knows

which to stress when,

and why. Realistic from

start to finish, this book

moves readers beyond

classroom exercises

into open-ended, real-

world process problem

solving. The authors

introduce integrated

techniques for every facet of the discipline, from finance to operations, new plant design to existing process optimization. This fully updated Third Edition presents entirely new problems at the end of every chapter. It also adds extensive coverage of batch process design, including realistic examples of equipment sizing for batch sequencing; batch scheduling for multi-product plants; improving production via intermediate storage and parallel equipment; and new optimization techniques specifically for batch processes. Coverage includes Conceptualizing and analyzing chemical processes: flow diagrams, tracing, process conditions, and

more Chemical process economics: analyzing capital and manufacturing costs, and predicting or assessing profitability Synthesizing and optimizing chemical processing: experience-based principles, BFD/PFD, simulations, and more Analyzing process performance via I/O models, performance curves, and other tools Process troubleshooting and “debottlenecking” Chemical engineering design and society: ethics, professionalism, health, safety, and new “green engineering” techniques Participating successfully in chemical engineering design teams Analysis, Synthesis, and Design of Chemical Processes, Third Edition, draws on

nearly 35 years of innovative chemical engineering instruction at West Virginia University. It includes suggested curricula for both single-semester and year-long design courses; case studies and design projects with practical applications; and appendixes with current equipment cost data and preliminary design information for eleven chemical processes—including seven brand new to this edition.

Catálogo colectivo de libros y monografías económicas Thomson Brooks/Cole

El lector tiene en sus manos un libro circunscrito a la organización y gestión de proyectos industriales. El texto se enfoca a la industria Química, pero la forma

en que los autores exponen, analizan y desarrollan los conceptos de gestión de proyectos, lo hace también válido para otros tipos de industria, como la energética. Los objetivos de los proyectos son evaluar, proponer, contratar, diseñar, construir y arrancar una o varias plantas industriales capaces de transformar unos bienes y servicios en otros de valor mayor. Ello no de cualquier manera, sino optimizando, a lo largo de la ejecución, la tensión entre precio, plazo y calidad. La obra se divide en dos partes. La primera aborda conceptos generales de la gestión de proyectos industriales, como son, por ejemplo: las

estimaciones económicas, la planificación, el control de actividades, etc. La segunda parte desarrolla la secuencia normal en la ejecución de los proyectos partiendo de la propuesta técnica y económica, pasando por el diseño y la gestión de acopios hasta llegar a la construcción y la puesta en marcha de una planta industrial.

Impactos ambientales y energía Ediciones Díaz de Santos
The 7th Edition of Gary Christian's Analytical Chemistry focuses on more in-depth coverage and information about Quantitative Analysis (aka Analytical Chemistry) and related fields. The content builds upon previous

editions with more enhanced content that deals with principles and techniques of quantitative analysis with more examples of analytical techniques drawn from areas such as clinical chemistry, life sciences, air and water pollution, and industrial analyses.

El problema del petróleo no es que se acabe de inmediato, sino que la demanda supere a la oferta debido a la presión de los países emergentes. Hay que ir pensando en alternativas que el tiempo dirá si son o no viables. El hidrógeno es una de las posibilidades, no como recurso, que no puede serlo, sino como vector energético de las energías renovables. En esta nueva edición ampliada y actualizada se representa una panorámica de la temática relacionada con el hidrógeno, desde un punto de vista socioeconómico,

termodinámico, de obtención, de almacenaje y utilización, sin olvidarse de los convertidores que permitirán devolver la energía utilizada en su obtención, las "fuel Cell", las pilas de combustible. INDICE : Ha llegado el hidrógeno como energía del mañana. Ante una nueva energía: problemas y estudios. Instauración de la economía del hidrógeno. Progresión de la revolución del hidrógeno. Termodinámica de la degradación energética. Obtención, almacenaje y normativa del hidrógeno. Las pilas de combustible. Aplicación del hidrógeno al transporte.
