The Development of the Social Self Guilford Publications

This definitive work comprehensively examines the role of temperament in the development of personality and psychopathology. Preeminent researcher Mary Rothbart synthesizes current knowledge on temperament's basic dimensions; its interactions with biology, the social environment, and developmental processes; and influences on personality, behavior, and social adjustment across the lifespan. In a direct and readable style, Rothbart combines theory and research with everyday observations and clinical examples. She offers new insights on "difficult" children and reviews intervention programs that address temperamental factors in childhood problems. This book will be invaluable to developmental psychologists; personality/social psychologists; child clinical psychologists and other mental health practitioners. It will also serve as a text in graduate-level courses

"Among the most influential models in contemporary behavioral science, self-determination theory (SDT) offers a broad framework for understanding the factors that promote human motivation and psychological flourishing. In this authoritative work, SDT cofounders Richard M. Ryan and Edward L. Deci systematically review the theory's conceptual underpinnings, empirical evidence base, and practical applications across the lifespan. Ryan and Deci demonstrate that supporting people's basic needs for competence, relatedness, and autonomy is critically important for virtually all aspects of individual and societal functioning."--Jacket.

Becoming Who We Are W W Norton & Company Incorporated

This volume is an attempt to integrate the theory and data of social and personality development within a modern evolutionary framework. The various chapters are not meant to be read in isolation from one another but rather are intended to form an integrated whole. There is thus a great deal of cross-referencing between chapters and to some extent they all stand or fall together. This also suggests that the accuracy (or usefulness) of a particular chapter cannot be judged until the book is comprehended as a whole. Chapter 1 deals with the theoretical foundations of this enterprise, and the focus is on the compatibility of mainstream approaches within the field to a modern evolutionary approach. Chapters 2-4 concern what I view to be the fundamental proximal mechanisms underlying social and personality development. Chapter 2, on temperament and personality development, is particularly central to the rest of the volume because these processes are repeatedly invoked as explanatory concepts at later points in the volume.
