Hanyu Jiaocheng Walter de Gruyter

In *Father of Chinese History*, Esther Klein

explores the life and work of the great

Han dynasty historian Sima Qian as seen

by readers from the Han to the Song

dynasties (100 BCE-1200 CE).

Text and Cognition Routledge

This book offers students all the

necessary tools to read, understand, and

analyse Classical Chinese texts,

including descriptions of syntactic

features, introductions to historical and

cultural topics, and selected readings

from classical literature with original

commentaries. It also provides an

extensive glossary and up-to-date

bibliography.

American Born Chinese Oxford

As a subject of universal appeal, spatial demonstratives have been studied extensively from a variety of disciplines.

What marks the present study as distinct is that it is an English-Chinese

comparative study set in a cognitive-

linguistic framework and that the

methodology features a parallel corpora-

based, discourse analysis approach. The

framework illuminates the nature of the

demonstratives basic and extended

meaning and use, the connections

between them, and the mechanisms that

govern and constrain their trends of

extension. The corpora place the English

and Chinese demonstratives in

comparable discourse contexts and

processes, providing an ecological

environment for the observation of how

their behavior fits into the respective

structural and discourse systems of the

two languages. The study also

illuminates important issues such as the

subjectivity of language, language as a

representational system and a vehicle of

communication, the interface between

form and function, and the role of

context in discourse comprehension.

BRILL

Key Issues in Chinese as a Second

Language Research presents and

discusses research projects that serve as

theoretical grounding for improving the teaching and learning of Chinese as a second language (CSL) in order to help researchers and practitioners better understand the acquisition, development, and use of CSL. With the exception of the first chapter, which is state-of-the-art, each chapter makes an attempt to bring together theory and practice by focusing on theory building and theory application in practice. The book is organized around areas where most future research is needed in CSL: phonology, semantics, grammar, and pragmatics. Consisting of contributions from an international group of scholars working on cutting-edge research, this is the ideal text for researchers, graduate students, and practitioners in the area of Chinese as a second or foreign language. *Standard Chinese course. Readings 2. Yuedu pian* John Benjamins Publishing Company

A tour-de-force by rising indy comics star Gene Yang, *American Born Chinese* tells the story of three apparently unrelated characters: Jin Wang, who moves to a new neighborhood with his family only to discover that he's the only Chinese-American student at his new school; the powerful Monkey King, subject of one of the oldest and greatest Chinese fables; and Chin-Kee, a personification of the ultimate negative Chinese stereotype, who is ruining his cousin Danny's life with his yearly visits. Their lives and stories come together with an unexpected twist in this action-packed modern fable. *American Born Chinese* is an amazing ride, all the way up to the astonishing climax. *American Born Chinese* is a 2006 National Book Award Finalist for Young People's Literature, the winner of the 2007 Eisner Award for Best Graphic Album: New, an Eisner Award nominee for Best Coloring and a 2007

Bank Street - Best Children's Book of the Year. This title has Common Core Connections
Oxford University Press
Teaching and Researching Chinese Second Language Listening focuses on Chinese L2 listening with theory and pedagogy at its heart. The objectives of the book are to recount the development of Chinese L2 listening pedagogy, to synthesize research on Chinese L2 listening, and to propose a Chinese L2 listening approach. This book is the first to bridge the gap between Chinese L2 and general L2 listening and develop a much-needed systematic teaching approach to Chinese listening based on research findings in L2 listening, the unique features of the Chinese language, and the distinctive characteristics of the Chinese L2 learner population. This book grounds Chinese L2 teaching in solid theories of L2 acquisition and teaching. The research-informed and evidence-based Chinese L2 teaching approach proposed in the book seeks to move beyond the traditional product-oriented approach to integrate form-, meaning-, process-, and learner-focused listening. This book also discusses Chinese L2 listening from learners' perspectives: heritage versus non-heritage learners and motivation. These are presented together with theory and teaching practice. The book is aimed at researchers, in-service teachers and students taking upper-level undergraduate courses and postgraduate courses for programs in Chinese applied linguistics and teaching Chinese as a second language (TCSL). Chinese listening studies to date have mostly been published in the Chinese language, which severely limits their readership. This book is therefore written in English to fill the gap in current

scholarship. Due to a large number of Chinese learners and the consequential booming programs in TCSL and CIE (Chinese international education), it is important to dedicate a book specifically to Chinese listening.

Hanyu Jiaocheng 7-8 John Benjamins Publishing

This book, comprising two parts, is concerned with both the science and the art of foreign language teaching, with a particular, but not exclusive, focus on Asia. Under the theme of “Theoretical foundation and research”, Part 1 of this book informs the readers about recent efforts in theoretical and empirical research which have had an impact on foreign language teaching or promise to yield results that will shape its future. These studies, not just from the domain of foreign language teaching but also its primary feeder disciplines of linguistics and second language acquisition, offer the necessary theoretical and conceptual foundation for both current and future research and practice. As its theme “Classroom practice and evaluation studies” suggests, Part 2 focuses on new and innovative developments in curricular and classroom practice, all built upon insights from research in the above-mentioned disciplines and poised to become standard practices. These projects include qualitative and quantitative evaluation studies which have yielded insightful data for the refinement and continued development of the projects and their underlying theoretical concepts.

Current Perspectives and Future Directions Taylor & Francis

□□□□: Advanced Chinese .Volume 3
Reading Sima Qian from Han to Song
First Second

This book constitutes the thoroughly

refereed post-workshop proceedings of the 21st Chinese Lexical Semantics Workshop, CLSW 2020, held in Hong Kong, China in May 2020. Due to COVID-19, the conference was held virtually. The 76 full papers included in this volume were carefully reviewed and selected from 233 submissions. They are organized in the following topical sections: Lexical semantics and general linguistics, AI, Big Data, and NLP, Cognitive Science and experimental studies.

Introduction to Classical Chinese BRILL

This volume explores how linguistic research can support the teaching and learning of Chinese as a second language. It responds to a rapidly growing interest in the Chinese language all over the world, and answers the need for a strong research background for the discipline. Without that, Chinese language learning remains only a unique experience and/or a useful education challenge. The first section explores crucial issues about the structure and use of Chinese as a Second Language such as word-order, noun-noun compounds, meaning-making in writing, pronunciation and stress and tone. The second section explores the learning of Chinese by seeking answer to questions about difficulties, expectations, beliefs, use of corpus and learning how to express necessity. The authors coming from eight different countries demonstrate how existing knowledge has been generated, bring together different lines of research, point out tendencies in the field, demonstrate and explain what tools and methods researchers can use to address major issues in the field, and give direction to what future research should focus on.

Microeconometrics and MATLAB: An Introduction Walter de Gruyter GmbH

& Co KG

This book is a practical guide for theory-based empirical analysis in economics that guides the reader through the first steps when moving between economic theory and applied research. The book provides a hands-on introduction to some of the techniques that economists use for econometric estimation and shows how to convert a selection of standard and advanced estimators into MATLAB code. The book first provides a brief introduction to MATLAB and its syntax, before moving into microeconomic applications studied in undergraduate and graduate econometrics courses. Along with standard estimation methods such as, for example, Method of Moments, Maximum Likelihood, and constrained optimisation, the book also includes a series of chapters examining more advanced research methods. These include discrete choice, discrete games, dynamic models on a finite and infinite horizon, and semi- and nonparametric methods. In closing, it discusses more advanced features that can be used to optimise use of MATLAB, including parallel computing. Each chapter is structured around a number of worked examples, designed for the reader to tackle as they move through the book. Each chapter ends with a series of readings, questions, and extensions, designed to help the reader on their way to adapting the examples in the book to fit their own research questions.

Nature

Based on empirical data from five classical texts, this study investigates flexibility of parts of speech in Classical Chinese. The findings suggest that flexibility in a parts-of-speech system can only be fully understood by

integrating a wide range of aspects. The components needed to account for it include constructions, semantics, metonymies, metaphors, pragmatic implicatures – and world knowledge as reflected within a given culture.

as a Second Language

Trends in linguistics is a series of books

that publishes state-of-the-art work on

core areas of linguistics across

theoretical frameworks as well as studies

that provide new insights by building

bridges to neighbouring fields such as

neuroscience and cognitive science. The

series considers itself a forum for

cutting-edge research based on solid

empirical data on language in its various

manifestations, including sign

languages. It regards linguistic variation

in its synchronic and diachronic

dimensions as well as in its social

contexts as important sources of insight

for a better understanding of the design

of linguistic systems and the ecology

and evolution of language. The book

uncovers the role. The Great Dictionary

of Modern Chinese Dialects plays in

analyzing the spectrum of linguistic

differentiation in China. The author starts

by sketching the development and

current state of Chinese dialectology and

dialectal research. She then provides an

analysis of the Dictionary and of the kind

of information it contains. Looking at

Chinese dialectology from a Western

point of view, the author aims to understand and present the Chinese perspective.

Teaching and Researching Chinese Second Language Listening Walter de Gruyter

This encyclopedic Ming-dynasty work on acupuncture and moxibustion lays out the fundamental theories of classical Chinese medicine that the author expands on and enriches with his personal clinical experience.

Xiandai-hanyu-jiaocheng

What was the most influential mass medium in China before the internet reaching both literate and illiterate audiences? The answer may surprise you...it's Jingju (Peking opera). This book traces the tradition's increasing textualization and the changes in authorship, copyright, performance rights, and textual fixation that accompanied those changes.

Hanyu jiaocheng

One major feature of conversation is that

people take turns to speak. Based on audio and video recordings of naturally-occurring Mandarin conversation, this book explores the role of syntax, prosody, body movements as well as their interplay in turn organization in the temporal unfolding of action and interaction. Adopting the methodology of interactional linguistics, this book offers a fine-grained analysis of the three multimodal resources and the sequential environments in which they appear. It demonstrates that syntax, prosody and body movements not only converge but also diverge in projecting possible turn completion. As one of the few systematic studies of multimodality in Mandarin interaction, this book will be of interest to researchers in Chinese linguistics, interactional linguistics, conversation analysis, and multimodal analysis.
