Hidden Dimensions John Wiley & Sons

"The city is not a lifeless thing. People have personality, identity and, as they are congregations of people, so do cities. In a constant cycle of influencing and being influenced the city impacts upon our mind and our emotional state impacts upon the city with untold effects. It is astonishing that psychology, the study exploring the dynamics of feeling and emotion, has not been taken sufficiently seriously as an urban discipline, not only by psychology itself but also urban decision makers, since it seeks to understand why we act the way we do. To see the urban fabric, its dynamics and city life as empty shells devoid of human psychological content is careless. To be blind to its consequences is foolish, as the city is primarily an emotional experience with psychological effects. Just as the body is the museum of human evolution so the psyche is the mental museum of our primeval psychological past, and we have carried anciently formed elements of it into this new urban age. There are psychological consequences to our adaptation to 'homo urbanis' and the cities that will do best may be those most able to connect the ancient as well as modern parts of ourselves. Seeing the city through a psychological lens can help create programmes to bring out potential and help heal fractures, divides or lack of confidence. It is extraordinary that it has not been given fuller attention in urban policy. The book explores how various psychological disciplines can be used, how to create a more psychologically mature city and how to analyse an urban psyche."--Publisher's description.

Leading and Managing the Expressive Dimension McClelland & Stewart

"Powerful and important . . . an instant classic." —The Washington Post Book World The award-winning look at an ugly aspect of American racism by the bestselling author of *Lies My Teacher Told Me*, reissued with a new preface by the author In this groundbreaking work, sociologist James W. Loewen, author of the classic bestseller *Lies My Teacher Told Me*, brings to light decades of hidden racial exclusion in America. In a provocative, sweeping analysis of American residential patterns, Loewen uncovers the thousands of "sundown towns"—almost exclusively white towns where it was an unspoken rule that blacks weren't welcome—that cropped up throughout the twentieth century, most of them located outside of the South. Written with Loewen's trademark honesty and thoroughness, *Sundown Towns* won the Gustavus Myers Outstanding Book Award, received starred reviews in *Publishers Weekly* and *Booklist*, and launched a nationwide online effort to track down and catalog sundown towns across America. In a new preface, Loewen puts this history in the context of current controversies around white supremacy and the Black Lives Matter movement. He revisits sundown towns and finds the number way down, but with notable exceptions in exclusive all-white suburbs such as Kenilworth, Illinois, which as of 2010 had not a single black household. And, although many former sundown towns are now integrated, they often face "second-generation sundown town issues," such as in Ferguson, Missouri, a former sundown town that is now majority black, but with a majority-white police force.

The Embodied Image The Embodied Image: Imagination and Imagery in Architecture Juhani Pallasmaa All artistic and architectural effects are evoked, mediated and experienced through poeticised images. These images are embodied and lived experiences that take place in 'the flesh of the world', becoming part of us, at the same time that we unconsciously project aspects of ourselves on to a conceived space, object or event. Artistic images have a life and reality of their own and they develop through unexpected associations rather than rational and causal logic. Images are usually thought of as retinal pictures but profound poetic images are multi-sensory and they address us in an embodied and emotive manner. Architecture is usually analysed and taught as a discipline that articulates space and geometry, but the mental impact of architecture arises significantly from its image quality that integrates the various aspects and dimensions of experience into a singular, internalised and remembered entity. The material reality is fused with our mental and imaginative realm. The book is organised into five main parts that look at in turn: the image in contemporary culture; language, thought and the image; the many faces of the image; the poetic image; and finally the architectural image. The Embodied Image is illustrated with over sixty images in pairs, which are diverse in subject. They range from scientific images to historic artistic and architectural masterpieces. Artworks span Michelangelo and Vermeer to Gordon Matta-Clark and architecture takes in Modern Masters such as Mies van der Rohe, Le Corbusier and Alvar Aalto, as well as significant contemporary works by Steven Holl and Daniel Libeskind.

With this groundbreaking book, discover the critical connections between anxiety and grief—and learn practical strategies for healing, based on the Kübler-Ross stages model. If you're suffering from anxiety but not sure why, or if you're struggling with loss and looking for solace, *Anxiety: The Missing Stage of Grief* offers help and answers. As grief expert Claire Bidwell Smith discovered in her own life—and in her practice with her therapy clients—significant loss and unresolved grief are primary underpinnings of anxiety. Using research and real life stories, Smith breaks down the physiology of anxiety, providing a concrete explanation that will help you heal. Starting with the basics questions—“What is anxiety?” and “What is grief?” and moving to concrete approaches such as making amends, taking charge, and retraining your brain, *Anxiety* takes a big step beyond Elisabeth Kübler-Ross's widely accepted five stages to unpack everything from our age-old fears about mortality to the bare vulnerability a loss can make us feel. With concrete tools and coping strategies for panic attacks, getting a handle on anxious thoughts, and more, Smith bridges these two emotions in a way that is deeply empathetic and profoundly practical.

The papers comprising this second volume of *Human Behavior and the Environment* represent, as do their predecessors, a cross section of current work in the broad area of problems dealing with interrelationships between the physical environment and human behavior, at both the individual and the aggregate levels. Considering the two volumes as a unit, we have included papers covering a broad spectrum of problems ranging from the theoretical to the applied, and from the disciplinary-based to the interdisciplinary and professional. Approximately half of the papers are written by psychologists, with the remainder coming, in part, from such other disciplines as sociology, geography, and from such diverse applied and professional fields as natural recreation, landscape architecture, urban planning, and operations research. The volumes thus provide an overview of

work on current topical problems. Yet, as the field is developing, specialization is inevitably increasing apace, and the editors as well as the publisher have become convinced of the desirability for future volumes in this series to be organized along topical lines, with successive volumes devoted to different aspects of this rather sprawling field. Thus, Volume 3, currently in the planning stage, will be devoted exclusively to the interaction of children with the physical environment, considered from diverse viewpoints, again including authors from diverse fields of specialization.

The scientific point of view has gained dominance in our growing world culture by basing its authenticity on an empirical foundation. Yet mystics can point to a different test of authenticity: the broad agreement in subtle perceptions of reality across many cultures and stretches of history. We benefit from the knowledge of the universe and the fascinating intricacies of nature, and we benefit from knowledge of meaning and purpose in the greater life of the cosmos and its implications for meaning in our own lives. An understanding and appreciation of the inner life of the universe can offer an integration of the scientific story of the outer life with the insight of mystics into the inner story, distinguishing the realms appropriate for science and spirituality to explore, and offering hope that they can coexist in mutual respect and harmony, and that each could enrich the other.
