A unique study of the engineering and tools used to create Egyptian monuments • Presents a stone-by-stone analysis of key Egyptian monuments, including the statues of Ramses II and the tunnels of the Serapeum • Reveals that highly refined tools and mega-machines were used in ancient Egypt From the pyramids in the north to the temples in the south, ancient artisans left their marks all over Egypt, unique marks that reveal craftsmanship we would be hard pressed to duplicate today. Drawing together the results of more than 30 years of research and nine field study journeys to Egypt, Christopher Dunn presents a stunning stone-by-stone analysis of key Egyptian monuments, including the statue of Ramses II at Luxor and the fallen crowns that lay at its feet. His modern-day engineering expertise provides a unique view into the sophisticated technology used to create these famous monuments in prehistoric times. Using modern digital photography, computer-aided design software, and metrology instruments, Dunn exposes the extreme precision of these monuments and the type of advanced manufacturing expertise necessary to produce them. His computer analysis of the statues of Ramses II reveals that the left and right sides of the faces are precise mirror images of each other, and his examination of the mysterious underground tunnels of the Serapeum illuminates the finest examples of precision engineering on the planet. Providing never-before-seen evidence in the form of more than 280 photographs, Dunn's research shows that while absent from the archaeological record, highly refined tools, techniques, and even mega-machines must have been used in ancient Egypt.

It is widely believed that the practice of ancient Egyptian religion ceased with the end of pharaonic culture and the rise of Christianity. However, an organised reconstruction and revival of the authentic practice of Egyptian, or Kemetite religion has been growing, almost undocumented, for nearly three decades. Profane Egyptologists is the first in-depth study of the now-global phenomenon of Kemetism. Presenting key players in their own words, the book utilises extensive interviews to reveal a continuum of beliefs and practices spanning eight years of community growth. The existence of competing visions of Egypt, which employ ancient material and academic resources, questions the position of Egyptology as a gatekeeper of Egypt's past. Exploring these boundaries, the book highlights the politicised and economic factors driving the discipline's self-conception. Could an historically self-imposed insular nature have harmed Egyptology as a field, and how could inclusive discussion help guard against further isolationism? Profane Egyptologists is both an Egyptological study of Kemetism, and a critical study of the discipline of Egyptology itself. It will be of value to scholars and students of archaeology and Egyptology, cultural heritage, religion online, phenomenology, epistemology, pagan studies and ethnography, as well as Kemetites and devotees of Egyptian culture.

Egyptology: The Missing Millennium Bloomsbury Publishing

Violence and Power in Ancient Egypt examines the use of Egyptian pictures of violence prior to the New Kingdom. Starting with the assertion that making and displaying such images served as a tactic of power, related to but separate from the actual practice of violence, the book explores the development and deployment of this imagery across different contexts. By comparatively utilizing violent images from a variety of other times and cultures, the book asks that we consider not only how Egyptian imagery was related to Egyptian violence, but also why people create pictures of violence and place them where they do,

and how such images communicate what to whom. By cataloging and querying Egyptian imagery of violence from different periods and different contexts—royal tombs, divine temples, the landscape, portable objects, and private tombs—Violence and Power highlights the nuances of the relationship between aspects of royal ideology, art, and its audiences in the first half of pharaonic Egyptian history.

Violence and Power in Ancient Egypt Routledge

The history of Egypt as taught to us is not complete. There are clearly stone structures which the dynastic people could not have constructed and this volume 2 of a series I show obvious examples of why a much older and technologically advanced civilization existed in ancient Egypt long before the pharaohs. *Proceedings of the XI International Congress of Egyptologists, Florence, Italy 23-30 August 2015* Routledge Egypt looms large in the Western imagination. Whether it is our attraction to pharaonic art, the pyramids or practices of mummification, Egypt's unique understanding of materiality speaks to us across space and time. Is it because the ancient Egyptians fetishized material objects that we find their culture captivating today? And what exactly do Egyptian remains tell us about biography, embodiment, memory, materiality, and the self? *Object Worlds in Ancient Egypt* takes New Kingdom Egypt (1539-1070 BC) as its starting point and considers how excavated objects reveal the complex ways that ancient Egyptians experienced their material world. From life to death, the material world instantiated, reflected and influenced social life and existence for ancient Egyptians. Thus, in Meskell's unique approach to the materiality and sensuousness of subjects and objects, we uncover the philosophical, spiritual and human meanings embedded in these cultural artefacts. Meskell's book explores the fundamental existential questions that not only preoccupied ancient Egyptians, but continue to fascinate people today. What is the essence of persons and things? How might we understand the situated experiences of material life, the constitution of the object world and its shaping of human

experience? How might objects successfully mediate between worlds? In the final analysis, Meskell moves forward through time and examines the consumption and appreciation of these Egyptian material objects in the contemporary world. Materiality is our physical engagement with the world, our medium for inserting ourselves into the fabric of that world and our way of constituting and shaping culture in an embodied and external sense. From that perspective it is very much the domain of anthropology and archaeology. Drawing on a wide range of objects, artefacts, and artwork, from Valley of the Kings through to Las Vegas, Meskell provides an elegant analysis of the aesthetics of ancient Egyptian material culture *Image and Ideology before the New Kingdom* Routledge Ancient Egyptian Materials and Technology Cambridge University Press

The underlying aim is to relate ancient Egypt to the broader mainstream of our understanding of how all human societies function. Source material is taken from ancient written documents, while the book also highlights the contribution that archaeology makes to our understanding of Egyptian culture and society. This book examines the fundamental evidence for many different aspects of change and evolution in ancient Egyptian technology. It includes discussion of the wider cognitive and social contexts, such as the Egyptian propensity for mental creativity and innovation, and the pace of change in Egypt in comparison with other African, Mediterranean and Near Eastern states. This book draws not only on traditional archaeological and textual sources but also on the results of scientific analyses of ancient materials and on experimental and ethno-archaeological information. Case-studies analyse those aspects of Egyptian society that made it either predisposed or actively opposed to certain types of conservatism or innovation in material culture, such as the techniques of stone-working, medicine, mummification and monumental construction.
