asignatura Matemáticas impartida a los alumnos de la diplomatura de la Escuela Universitaria de Ciencias Empresariales (EUCE) de la Universidad de Alicante durante mi estancia como profesor del Departamento del Fundamentos de Análisis Económico. Cubre el siguiente material: Cálculo univariable (límites, continuidad, aplicaciones de las derivadas, representació

n gráfica de una función, cálculo integral); Funciones de dos variables; Álgebra matricial. El libro contiene muchos ejemplos y ejercicios resueltos de exámenes pasados. Methods in Business. This classic text continues to provide a mathematical foundation for students in business, economics, and the life and social sciences. Abundant applications cover such diverse areas as business, economics, biology, medicine, sociology, psychology, ecology, statistics, earth science, and archaeology. Its depth and completeness of coverage enables

instructors to tailor their courses to students' needs. The authors frequently employ novel derivations that are not widespread in other books at this level. The Twelfth Edition has been updated to make the text even more student-friendly and easy to understand. *Problemas de matemáticas para administración y economía* McGraw-Hill College It has been 20 years since

the last edition of this classic text. Kevin Wainwright, a long time user of the text (British Columbia University and Simon Fraser University), has executed the perfect revision--he has updated examples, applications and theory without changing the elegant, precise presentation style of Alpha Chiang. *ALGEBRA. Learning Editores "MATEMATICAS BASICAS. Una Introducción al Cálculo" tiene una fácil manera para aprender a aprender Matemáticas con cuatro capítulos principales; el primero está referido a la teoría de conjuntos, el sistema numérico y la recta real, junto con el sistema cartesiano del plano y espacio. El segundo capítulo muestra aplicaciones de la teoría de	conjuntos, las permutaciones, las combinaciones, las relaciones y las funciones. El tercer capítulo ilustra traslaciones y modelos funcionales con los tipos de funciones: real, polinómica, constante, lineal, cuadrática, exponencial, logarítmica, trigonométricas y función inversa. El cuarto capítulo desarrolla las ecuaciones y desigualdades, junto con sistemas de ecuaciones y	desigualdades lineales o no lineales. El quinto capítulo concluye con ejercicios de recapitulación resueltos. Esta obra está dirigida a estudiantes universitarios en programas académicos presenciales o de educación a distancia en ciencias económicas, administrativas, sociales y humanísticas. <i>Introductory Mathematical Analysis for Students of Business and Economics</i> Universidad del Norte <i>Introducción a</i>
