The efficient use of natural resources is key to a sustainable economy, and yet the complexities of the physical aspects of resource efficiency are poorly understood. In this challenging book, the author proposes a major advance in our understanding of this topic by analysing resource efficiency and efficiency gains from the perspective of common pool resources, applying this idea particularly to water resources and its use in irrigated agriculture. The author proposes a novel concept of "the paracommons", through which the savings of increased resource efficiency can be viewed. In effect he asks; "who gets the gain of an efficiency gain?" By reusing, economising and avoiding losses, wastes and wastages, freed up resources are available for further use by four 'destinations'; the same user, parties directly connected to that user, the wider economy or returned to the common pool. The paracommons is thus a commons of - and competition for - resources salvaged by changes to the efficiency of natural resource systems. The idea can be applied to a range of resources such as water, energy, forests and high-seas fisheries. Five issues are explored: the complexity of resource use efficiency; the uncertainty of efficiency interventions and outcomes; destinations of freed up losses, wastes and wastages; implications for resource conservation; and the interconnectedness of users and systems brought about by efficiency changes. The book shows how these ideas put efficiency on a par with other dimensions of resource governance and sustainability such as equity, justice, resilience and access.

This book reports on an empirical study of oral feedback practices in doctoral supervision meetings, observing supervisors' and students' conduct to enable a new understanding of the social organisation of doctoral research supervision. In a field that has predominantly drawn on surveys and interviews, this study presents a rare, direct insight into doctoral supervision meetings, showing us what actually happens and making a significant contribution to future practice. Based on 25 video-recorded supervision meetings at an Australian university, the book invites the reader into the micro-world of interactions between doctoral students and their supervisors. Drawing on conversation analysis

as an analytical framework, the study uncovers how feedback is initiated and delivered, how supervisors manage when students disagree with their advice and guidance, how they acknowledge student autonomy and identity as people with knowledge and expertise in their own right, as well as how supervisors co-work within a team supervision environment. Offering an important new perspective to the study and practice of doctoral supervision, this book will be of interest to doctoral supervisors, postgraduate students and researchers working with conversation analysis and education, and those with an interest in feedback and advice as an integral part of their professions.

Finding the Bad Apples in the Barrel: Using the Market Value of Equity to Signal Banking Sector Vulnerabilities Frontiers Media SA
Dr Mohammad Nurunnabi examines the factors that affect the implementation of International Financial Reporting Standards (IFRS) in developing countries and answers these specific research questions: - What is the relative impact of accounting regulatory frameworks and politico-institutional factors on the implementation of IFRS in developing countries? - How do cultural factors affect said implementation? - How does a study of implementing IFRS help to build an understanding of a theory of the role of the state in accounting change in developing countries? This follows a mixed methodology approach, in which interviews are conducted, IFRS-related enforcement documents and annual reports are evaluated. More than 138 countries have adopted IFRS, yet the International Accounting Standards Board (IASB) does not provide an implementation index. Financial reporting varies by country, even within the area of the world that

has apparently adopted IFRS and Nurunnabi offers an important viewpoint that considers the issues of IFRS implementation from various perspectives. This is an invaluable resource for Undergraduate, Masters and PhD students, policy makers (at local, regional and international level) namely the IASB, World Bank, IMF, practitioners and users, giving them the necessary insight into the financial reporting environment and the state's attitude towards accounting transparency. Most importantly, this book contributes to military and democratic political regimes and the Max Weberian view of the theory of the role of the state's attitude towards accounting transparency.

Handbook of Quality of Life and Sustainability Elsevier

This handbook provides the latest research related to quality of life and sustainability, taking into account social, economic, environmental, and political/governance aspects as well as specific socio-spatial contexts. The volume includes contributions from established and upcoming scholars from various disciplines and geographical contexts (Global South and North). The varying cultural and socio-spatial contexts of the authors in the selected cases contribute to first-hand knowledge on the realities of sustainability issues affecting the quality of life. The authors apply a wide diversity of methods and tools, which facilitates a unique understanding of the interlinkages between quality of life and sustainability. The chapters are grouped in three main sections: concepts and foundations; tools, techniques, and applications; and innovations. The authors provide their own view and theoretical approximation of the dimensions of sustainability, in particular on how these dimensions play out in relation to quality of life. The combination of sustainability and quality of life concepts and perspectives is particularly important in unravelling the multi-faceted nature of human, urban, rural/spatial development.

Accounting literature has viewed sustainability in terms of social, economic and environmental performances. There have been concerns that the relationship between sustainability, accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices. Ecology, Sustainable Development and Accounting argues that, despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour; an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations. Drawing examples from international development and federal government organizations, this book documents the link between ecology, corporate sustainable development, and sustainability accounting and reporting. It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature. This book will be of particular interest to students, academics and practitioners in the areas of environmental studies, ecological economics, sustainable development studies, and social and environmental accounting. The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature.

This book introduces the integrated management concept of "Sustainable Value Creation", which delivers sustainability 'inside-out' from the core business. It is based on the premise that sustainability can provide a platform for growth, if it is implemented in a company's products, services and supply chains (combined also known as the 'Value Chain'). Managing the Value Chain from the outset with a sustainability mindset subsequently allows profitable economical, ecological and societal growth. It combines the need for increased sustainability and its implementation in the operations of a company. The book addresses the following issues: How do economic, environmental and societal factors impact the value-creation process of a company? What requirements and expectations need to be met to balance economic, ecologic and societal value creation? What are the building blocks and measures that can be utilized on the journey towards building a sustainable value chain? What benefits can be achieved through sustainable value chains? What are the

practical examples of sustainable value chains in leading companies that can inspire others to follow? The book includes contributions from the following organisations and companies: Beiersdorf, SAP, Klenk und Hoursch, VAUDE, Infineon Technologies, Independent Capital Management, BASF, Nanogate, the Federal German Council for Sustainable Development, Henkel, Symrise, shared.value.chain, Siemens, Fairphone and Thin Air Factory

The purpose of this book is to study the association of corporate environmental responsibility (CER) with financial performance, capital structure, innovative activities, corporate risk, working capital management and accounting quality. Undoubtedly, CER has been developed into a crucial corporate issue around the world. CER has been incorporated within various sectors, countries and includes many types of activities and dimensions. A fundamental issue that is addressed in this book, is how corporate finance and accounting are affected by CER activities and how it impacts company performance. In order to analyse this interrelation, the authors focus on a sample of firms from 28 EU member countries. The purpose of this book is to study the association of CER with financial performance, capital structure, innovative activities, corporate risk, working capital management and accounting quality. The book also intends to provide useful policy recommendations as well as to offer constructive impulses for future research.

It is now well accepted that deforestation is a key source of greenhouse gas emissions and of climate change, with forests representing major sinks for carbon. As a result, public and private initiatives for reducing emissions from deforestation and forest degradation (REDD) have been widely endorsed by policy-

makers. A key issue is the feasibility of carbon trading or other incentives to encourage land-owners and indigenous people, particularly in developing tropical countries, to conserve forests, rather than to cut them down for agricultural or other development purposes. This book presents a major critique of the aims and policies of REDD as currently structured, particularly in terms of their social feasibility. It is shown how the claims to be able to reduce greenhouse gas emissions as well as enhance people's livelihoods and biodiversity conservation are unrealistic. There is a naive assumption that technical or economic fixes are sufficient for success. However, the social and governance aspects of REDD, and its enhanced version known as REDD+, are shown to be implausible. Instead to enhance REDD's prospects, the author provides a roadmap for developing a new social contract that puts people first.

The United Nations' 17 Sustainable Development Goals (SDGs) were set with a target date of 2030, and they represent our collective endeavors for a more sustainable future. However, seven years since their introduction, international business scholars have yet to fully comprehend their potential to lead

these goals. This critical gap raises a pressing question: why has the academic community not fully harnessed its power to advance the SDGs? Amid an abundance of scholarly publications on ethics and responsible governance, corporate social responsibility (CSR), sustainable development, and environmental concerns, the spotlight has dimmed on the pivotal role that international business can play in this transformative agenda.

Smart Strategies and Societal Solutions for Sustainable International Business solves this issue with chapters developed specifically for academic scholars. This book serves as a comprehensive guide to unleash the untapped potential of international business in promoting the SDGs. Covering a wide range of disciplines, from information sciences to sociology and environmental studies, it equips scholars with the knowledge and

tools they need to push sustainable international business to the forefront of the global agenda. With a meticulous exploration of crucial topics such as corporate governance, digital transformation, environmental sustainability, social responsibility, and more, this book offers a blueprint for academic scholars to spearhead the charge toward a more sustainable and equitable world.
