The Brave Athlete solves the 13 most common mental conundrums athletes face in their everyday training and in races. You don't have one brain—you have three; your ancient Chimp brain that keeps you alive, your modern Professor brain that navigates the civilized world, and your Computer brain that accesses your memories and runs your habits (good and bad). They fight for control all the time and that's when bad things happen; you get crazy nervous before a race, you choke under pressure, you quit when the going gets tough, you make dumb mistakes, you worry about how you look. What if you could stop the thoughts and feelings you don't want? What if you could feel confident, suffer like a hero, and handle any stress? You can. The Brave Athlete from Dr. Simon Marshall and Lesley Paterson will help you take control of your brain so you can train harder, race faster, and better enjoy your sport. Dr. Marshall is a sport psychology expert who trains the brains of elite professional athletes. Paterson is a three-time world champion triathlete and coach. Together, they offer this innovative, brain training guide that is the first to draw from both clinical science and real-world experience with athletes. That means you won't find outdated "positive self-talk" or visualization gimmicks here. No, the set of cutting-edge mental skills revealed in The Brave Athlete actually work because they challenge the source of the thoughts and feelings you don't want. The Brave Athlete is packed with practical, evidence-based solutions to the most common mental challenges athletes face. Which of these sound like you? · Why do I have thoughts and feelings I don't want? · I wish I felt more like an athlete. · I don't think I can. · I don't achieve my goals. · Other athletes seem tougher, happier, and more badass than me. · I feel fat. · I don't cope well with injury. · People are worried about how much I exercise. · I don't like leaving my comfort zone. · When the going gets tough, the tough leave me behind. · I need to harden the f*ck up. · I keep screwing up. · I don't handle pressure well. With The Brave Athlete: Calm the F*ck Down and Rise to the Occasion, you can solve these problems to become mentally strong and make your brain your most powerful asset.

Sports medicine and sports science are relatively new and rapidly developing fields of knowledge. During the past 2 decades, a significant body of scientific knowledge has been published in these areas. However, there is a demand for practical references which address sports medicine and science in the context of different sports. This demand is higher in some sports including combat sports, which are highly physically and mentally demanding, and cause challenging issues such as risk of blood-borne infections, weight reduction, head injuries, stress management, and safety for women and children. This book has been developed to meet the needs of the practitioners who work with combat sports athletes in order to improve their health and performance. Combat sports include four Olympic sports (boxing, wrestling, judo, and t- kwondo) and other popular sports such as karate, kick boxing, and Wushu. These sports are popular in most countries of the world, both at competitive and recreational levels. Combat sports are practiced by people of different ages for a variety of reasons such as to gain fitness and health benefits and to learn self-defense.

Lessons from a Life in Tennis Grove/Atlantic, Inc.

This is the first book exploring the concept of home advantage (HA), the well-known beneficial effect that players and teams derive from performing at home in all sports throughout the world. Despite the fact that the existence of HA dates back to the origins of organized sport in the late 19th century, its root causes and how they operate and interact with each other are still unclear and remain the topic of intense research involving many disciplines, all with the potential objective of improving team and individual performance. This book covers a broad review of HA divided into three different sections: (i) Section 1 focuses on the theory of HA in sport (the concept of this phenomenon, its quantification, and factors supposedly associated with the HA are explored); (ii) Section 2 analyses the effects of HA in sports related to both male and female athletes, in relation to tactics and strategies, fans, referees, travel, situational variables and the home disadvantage; and (iii) Section 3 studies the HA as it applies to specific sports worldwide such as outdoor sports (football, rugby, cricket, and Australian Football), indoor sports (basketball, futsal, handball, water polo and volleyball), US professional sports, individual sports, racket sports, combat sports, minor sports, disabled sports and the Olympic Games. This book has been written in cooperation with top

leading experts in this field worldwide. The book offers a better understanding of the HA effect for MSc and PhD students, athletes, coaches, performance analysts, sport psychologists, sociologists, sport scientists and sport journalists.
