An emotional tale of identity, sexuality and suicide

derived from personal experience about three teenage boys who struggle to come to terms with their homosexuality in a small Western Australian town. On the surface, nerd Zeke, punk Charlie and footy wannabe Hammer look like they have nothing in common. But scratch that surface and you'd find three boys in the throes of coming to terms with their homosexuality in a town

where it is invisible. Invisible Boys is a raw, confronting YA novel that explores the complexities and trauma of rural gay identity with painful honesty, devastating consequences and, ultimately, hope.

Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice. First by the United States, through the development of 'mass production' pioneered by Henry Ford and more recently by 'lean production techniques' as practised by the leading Japanese producers, particularly Toyota. It has consistently

risen to these challenges and has shown it can compete and even outperform its competitors with world-class products. However, the European industry is now faced with growing competition and growth from new emerging low-cost countries and needs to re-define its competitive advantage to remain at the forefront of the sector. Automotive growth is driven by two factors, new

markets and new technologies. Global competition is increasing, with technology and product differentiation becoming the most important sales factors, but with continued cost pressure. Within the market the winners will be more profitable and the losers will disappear. The Automotive Industry makes a significant contribution to the socio-economic

fabric of the European Union. Manufacturing output represents €700 billion and research and development spending €24 billion. European automotive suppliers number 5000 member companies and represent 5 million employees and generate €500 billion in revenues. These are significant figures that generate wealth and high value employment within the EU.

European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets.
