Another design administers the MMPI-2 to a large group of individuals and selects out a subset of participants who are later discovered to have misrepresented themselves. These feigned profiles are compared to honest profiles. This "known-groups" design is believed to be more generalizable because these feigners are genuine feigners. The present study used the "known-groups" design with the Q-sort (a measure known for its high reliability) as the independent measure of feigning.

Therapeutic Feedback with the MMPI-2 provides the clinician with empirically-based, practical information about how to convey the abundance of information in the MMPI-2 profile in a way that is collaborative, empathic, hopeful, and facilitates a therapeutic alliance. Readers will find this book to be as useful and applicable as the MMPI-2 itself, which is used in psychiatric hospitals; correctional settings; in evaluations for job selection, general medicine, forensic and child custody cases; and even in screenings for television, game, and reality shows. The authors expand upon this already robust test by demonstrating how therapeutic assessment and feedback can be improved upon by considering three contributions from positive psychology: that behavior can be viewed as potentially adaptive; traditional pathological and maladaptive behaviors can be reframed as understandable responses to stressors that therapeutic feedback is empathic, nonjudgmental, and mostly jargon free; humans respond to overwhelming stress in understandable ways that the therapist can give coherence and meaning to lastly, that therapeutic feedback stresses self-esteem and resilience building through self-awareness as a goal. Discussion centers around ten scales and 27 common code types. Each section addresses the complaints, thoughts, emotions, traits and behaviors associated with the profile; therapists' notes; lifestyle and family background; modifying scales; therapy and therapeutic pitfalls; feedback statements; and treatment and self-help suggestions. The larger page size reflects the size of the MMPI-2 interpretive reports and makes it easy for clinicians to copy pages of the book to share with their clients. Therapeutic Feedback with the MMPI-2 is the most detailed volume available on MMPI-2 feedback and is a valuable addition to the bookshelf of any clinician who uses this test.

Integrating the Rorschach and the MMPI-2 in Personality Assessment John Wiley & Sons

According to Culturally Appropriate and Valid Psychological Assessments for Ethical Use with American Indians (CVE) as cited on the website of the Minnesota Department of Human Services, 26.6% of the state's Native American population who complete a diagnostic assessment take the Minnesota Multiphasic Personality Inventory - 2nd edition (MMPI-2) in any given year. As such, a pertinent question is whether the MMPI-2 is an appropriate tool for assessing personality for this population. Nichols (2011) stated that the practicing clinicians who participated in the study failed to use research on cultural influences that may elevate the clinical and validity scale on the MMPI-2 with a specific ethnic population. In addition, Butcher and Williams (1999) stated that the MMPI-2 did not include an adequate normative representation

of Native Americans. Furthermore, Butcher and Williams (1999) also stated that most studies about the MMPI-2 and Native Americans have shown numerous methodological flaws. Despite these flaws, proponents of the MMPI-2 continued to maintain that the use of the instrument is culturally valid, and it continues to be the most used personality assessment instrument with Native Americans (Butcher, 2009; Butcher & Williams, 1999). The focus of this qualitative study was to provide a detailed view of six clinicians' experiences in administering the MMPI-2 with Native Americans and their use of cultural information to interpret the profile. Using thematic analysis, the results yielded seven themes that were categorized in three distinct domains: A) trauma informs the responses to MMPI-2, B) awareness of clients' cultural belief system by the clinicians, and C) clinicians' awareness of their own cultural competence and sensitivity.

MMPI-A: Assessing Adolescent Psychopathology Routledge

The MMPI-A is the most widely used personality inventory for adolescents, and there are no two people who know it better than Carolyn L. Williams and James N. Butcher. A Beginner's Guide to the MMPI-A provides an introduction to an assessment standard that is solidly grounded in adolescent psychology. It can be used as a text in graduate classes, as a how-to for psychologists interpreting the MMPI-A, or as a reference book. It is written for a diverse audience to include physicians, social workers, counselors, and attorneys, along with psychologists. Williams and Butcher explain, in jargon-free language, how the MMPI-A was developed and how it can be interpreted using the multiple scales added over its almost 70-year history. The book walks the reader through the steps of test administration, scoring, interpretation, and how to integrate the MMPI-A into a psychological evaluation. The authors also demystify computerized interpretive systems for the MMPI-A. Readers have the opportunity to quiz themselves on how scale scores take shape as interpretive statements, and to interact with 15 case scenarios. Finally, the authors provide step-by-step guidance on the best practices for sharing their interpretive reports with adolescents and parents in MMPI-A feedback sessions.

A Content Cluster Approach Routledge

The Minnesota Multiphasic Personality Inventory-2 (MMPI-2) is a self-report of psychiatric symptoms that is frequently used for treatment planning. MMPI2 codetypes were created to increase the assessment's accuracy in identifying psychopathology. The etiology of behaviors associated with elevated codetypes is attributed to reactions to environmental forces. These codetype groups and their associated clinical scales represent homogenous sets of behaviors and are often associated with specific psychiatric diagnoses. Typically, 6-8/8-6 codetypes are associated with Schizophrenia, the most common being Paranoid type. Although MMPI-2 codetypes are believed to represent specific sets of behaviors, recent dimensional findings suggest that codetypes and clinical scales may possess heterogeneous properties. This dissertation investigated MMPI-2 6-8/8-6 codetype and clinical scales 6 (Pa) and 8 (Sc) to determine if they are dimensional or categorical clinical constructs. A sample of 5,000 mental health outpatient MMPI-2 profiles was randomly selected from the Caldwell clinical data set. MAMBAC and MAXEIG procedures were utilized to analyze the latent structures of the MMPI-2 6-8/8-6 codetype and clinical scales 6 (Pa) and 8 (Sc). It was hypothesized that the 6-8/8-6 codetype would be taxonic, while clinical scales 6 (Pa) and 8 (Sc) would be dimensional. It was found that the 6-8/8-6 codetype and scales 6 (Pa) and 8 (Sc) were non-taxonic constructs. These findings are consistent with previous non-taxonic findings for the 4-7/7-4, 4-8/8-4, and 6-9/9-6 codetypes and various clinical scales. Implications for the conceptualization and interpretation of this codetype, limitations of the study, and future research considerations are addressed.

This third edition appraises users of the MMPI-2/MMPI-2-Restructured Form (RF) for the ever-changing landscape of this dynamic personality/psychopathology instrument and its expanding utility in a variety of contexts. Two new chapters addressing the RC scales and the MMPI-2-RF are included in this updated text. Additionally, over 450 new references have been incorporated into the book, with information gathered and organized for practical clinical and forensic applications. The codetype interpretation chapter has expanded its sections with more in-depth feedback information and treatment considerations for clinicians to help in facilitating the formulation of treatment recommendations and strengthening therapeutic relationships with their clients. A number of special scales with clinical and forensic applications are also covered in this edition. An important section has been added addressing the MMPI and suicide. This new edition is a must-have resource that will inform and guide

users of the MMPI-2 and MMPI-2-RF in their daily practices, and assist researchers in conceptualizing the operating characteristics and configural relationships among the various scales and indices that comprise this instrument. From simple single scale interpretation to complex configural relationships, this text addresses a broad bandwidth of interpretive information designed for text users' at all levels of sophistication.

A collection of illustrative adolescent case studies to aid clinicians in problem identification, diagnosis, and treatment planning—the only casebook for the MMPI-A-RF The MMPI-A-RF is linked to current models of psychopathology and personality, and features scales relevant for use with adolescents in a variety of clinical, forensic, and school settings. It mirrors the structure of the MMPI-2-RF, resulting in the most up-to-date, empirically based personality assessment for use with adolescents. Written by the authors of the earlier *Case Studies for Interpreting the MMPI-A*, this book continues the goal of serving as an authentic and illustrative guide for clinicians in understanding and using the MMPI-A-RF. Since the publication of the original *Case Studies*, much has changed for clinicians who assess and treat adolescents. The interpretive model described in this book demonstrates how the MMPI-A-RF can assist clinicians in assessing youth today by highlighting sixteen cases that broadly represent adolescents evaluated in clinical and forensic practice. In addition, one of the most common uses for the MMPI-A-RF is in the juvenile court setting—a landscape that has also dramatically changed since the publication of the original MMPI-A. *Case Studies for Interpreting the MMPI-A-RF* focuses on detailed forensic issues, including legal backgrounds, case law, and assessment methods specific to use of the MMPI-A-RF in juvenile court and related settings. *Case Studies for Interpreting the MMPI-A-RF* will assist clinicians in understanding MMPI-A-RF interpretation, while also being a valuable teaching tool for courses in assessment.

Therapeutic Feedback with the MMPI-2 Oxford University

The establishment of frank and honest communication is one of the most important early goals of psychotherapy. Indeed, the most prominent challenge in the early stages of treatment is to develop a comfortable relationship that allows disclosure. In this volume, the authors show that objectively interpreted personality measures can be applied in psychotherapeutic assessments to facilitate an understanding of the patient and a thriving treatment program. Successful psychotherapy depends upon an early understanding of the patient's problems and personality and the establishment of attainable treatment goals. The extensive accumulated base of knowledge about personality and its maladjustment has become crucial when making treatment decisions about individuals in psychotherapy, and the field of personality assessment provides both methods and substantive information to support treatment-oriented evaluation. The MMPI has a long tradition of providing personality information about clients in mental health settings since the 1940s. James Butcher participated in the creation of the Minnesota Multiphasic Personality Inventory (MMPI-2) in 1989, which has continued to be one of the most commonly used personality tests in clinical evaluation. Over a thousand studies have been conducted on the effectiveness of the MMPI in treatment related assessments. Here, Butcher and co-author Julia Perry explore the MMPI-2 as well as a new assessment tool, the Butcher Treatment Planning Inventory (BTPI). In using psychological evaluation techniques for treatment planning, many clinicians incorporate information from a broad base of instruments-clinical interview, projective testing, behavioral data, and personal history-and do not rely on data from a single source. Therefore, while this volume focuses on the use of the MMPI-2 and the BTPI in treatment planning, it will provide a context not to the exclusion of other measures.
