Excerpt from Cost

Accounting and Burden

Application The object of

this book is to examine

the elements of cost, and

to define principles and

describe methods of

procedure in the

development of a cost

accounting practice,

particularly in respect to

the determination and

application of overhead

charges or burden. In

Chapter III material and

material costs are

discussed with reference

to the practice of a machine shop, or similar metal working industry. The principles which govern purchasing, however, and many relating to receiving, storing and issuing materials, are universal in their application. In Chapter IV on labor costs, the exposition of accounting principles and practice is concerned with work done on definite manufacturing orders (or similar orders for repairs, construction, maintenance, or operating expenses). There are,

however, some articles manufactured which for various reasons cannot be conveniently segregated into lots, and their cost of manufacture accumulated on job orders. This is true of some kinds of textiles, the tanning of leather and the manufacture of products by continuous operations, such as flour, brick or cement. Products like candy, boots and shoes and the cheaper jewelry, although made in well defined lots, cannot effectively have their manufacturing cost reckoned actually in the

same units. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
