 interface (also referred to as IIC or TWI) is a widely used interface in embedded applications. Two wire bus initially was used by Philips and become a standard among chip vendors. I2C bus consists of two lines called Serial Data Line (SDA) and Serial Clock Line (SCL). Communication is relatively fast, and short distance mainly used to communicate between sensors, RTC, EEPROM, LCD. I2C ...Programming AVR I2C interface - EmbeddsBasics. The I²C (Inter-Integrated Circuit) protocol, referred to as I-squared-C, I-two-C, or IIC) is two wire serial communication protocol for connecting low speed peripherals to a microcontroller or computer motherboard..
