Perfecting Engineering and Technical Drawing MIT Press (MA)

This book solves a long-standing problem in computer vision, the interpretation of line drawings and, in doing so answers many of the concerns raised by this problem, particularly with regard to errors in the placement of lines and vertices in the images. Sugihara presents a computational mechanism that functionally mimics human perception in being able to generate three-dimensional descriptions of objects from two-dimensional line drawings. The objects considered are polyhedrons or solid objects bounded by planar faces, and the line drawings are single-view pictures of these objects. Sugihara's mechanism has several potential applications. It can facilitate man-machine communication by extracting object structures automatically from pictures drawn by a designer, which can be particularly useful in the computer-aided design of geometric objects, such as mechanical parts and buildings. It can

also be used in the intermediate stage of computer vision systems used to obtain and analyze images in the outside world. The computational mechanism itself is not accompanied by a large database but is composed of several simple procedures based on linear algebra and combinatorial theory.

Contents: Introduction. Candidates for Spatial Interpretation. Discrimination between Correct and Incorrect Pictures. Correctness of HiddenPart-Drawn Pictures. Algebraic Structures of Line Drawings. Combinatorial Structures of Line Drawings. Overcoming Superstrictness. Algorithmic Aspects of Generic Reconstructibility. Specification of Unique Shapes. Recovery of Shape from Surface Information. Polyhedrons and Rigidity. Kokichi Sugihara is Professor in the Department of Mathematical Engineering and instrumentation Physics, Faculty of Engineering, the University of Tokyo, Tokyo, Japan. Machine interpretation of Line Drawings is included in The MIT Press Series in Artificial Intelligence, edited by Patrick Henry Winston and Michael Brady.

This volume covers the more advance techniques in engineering drawing. The coverage of the text includes the helix, which is the path traced by a point moving uniformly around the surface of a right cylinder that is moving axially. The book also covers drawings of solid objects such as prisms, pyramids, and cones, along with hollow objects made from sheet material. In Chapter 5, the text presents the conventional representations of

common features. The sixth chapter deals with all forms of fastenings, while the seventh chapter talks about metrication in the drawing office. The last chapter details the working drawings of assemblies and parts taken from those assemblies. The text will be most useful to students and professional engineers, as both learning material and reference source.

Engineering Drawing for Manufacture
Elsevier

This self-contained comprehensive book has been written to cover almost all important topics on engineering drawing to introduce polytechnic and undergraduate students of engineering to the standards and convention of technical drawing. Initial chapters of the book cover basics of line work, engineering scales, engineering curves and dimensioning practices. In the next stage, fundamental principles of projection are discussed in detail. Subsequent chapters cover topics on orthographic projections of points, lines, planes and solids. First-angle projections have been adopted throughout the chapters covering orthographic projection. With a strong emphasis on creating accurate and clear drawings, a chapter on AutoCAD software is also included in the book. The chapter is organized such that it describes the application of the software presenting and applying these standards. More importantly, all the elaborations of the software are alone making use of screen captures taken from the AutoCAD screen so that a novice user will be able to understand its application easily. A large number of solved examples with detailed steps examining methods for solving them have been incorporated to help students solve the unsolved problems.
Drafting for Engineers Vikas Publishing House
The processes of manufacture and assembly are based on the communication of engineering information via drawing. These drawings

follow rules laid down in national and international standards. The organisation responsible for the international rules is the International Standards Organisation (ISO). There are hundreds of ISO standards on engineering drawing because drawing is very complicated and accurate transfer of information must be guaranteed. The information contained in an engineering drawing is a legal specification, which contractor and sub-contractor agree to in a binding contract. The ISO standards are designed to be independent of any one language and thus much symbology is used to overcome any reliance on any language. Companies can only operate efficiently if they can guarantee the correct transmission of engineering design information for manufacturing and assembly. This book is a short introduction to the subject of engineering drawing for manufacture. It should be noted that standards are updated on a 5-year rolling programme and therefore students of engineering drawing need to be aware of the latest standards. This book is unique in that it introduces the subject of engineering drawing in the context of standards.

Principles of Engineering Drawing for Technical Students S. Chand Publishing

Engineering Graphics has been serving the community of engineers as the only medium through which all sorts of engineering communications regarding planning as well as design can be made. Hence it is essential for all engineers to achieve the capability of reading, preparing and interpreting drawings. The aim of the book is to provide a well-built foundation of engineering drawing to the beginners and to provide a scope to have a brushing up facility for the practicing engineers. Keeping these two basic objectives in view, a step-by-step approach has been adopted - starting from drawing instruments, sheets, scales, curves, etc. The guidelines as laid in different codes published by Bureau of Indian Standard are mentioned and followed. Involved association of the authors with the subject for a pretty long time in various capacities like teacher, examiner, paper-setter, and head-examiner has enriched the book in terms of content and its approach of dealing. Sufficient number of worked out examples and multiple choice questions are provided to have a holistic view of the subject.
