Clinical cardiologists are encountering an important challenge in the caring of families with inherited cardiac diseases. The majority of the inherited cardiac diseases causing sudden death express themselves at variable ages in the form of altered muscle function (i.e hypertrophic or dilated cardiomyopathy) or in the form of

arrhythmias (i.e. Brugada syndrome, long QT syndrome). However, it is not uncommon that the first sign of the disease may actually be sudden cardiac death, even before the identification of clear clinical abnormalities. In this last decade, with more than 50 new disease-associated genes identified, the possibility of genetic testing has opened a new opportunity to disease diagnosis and prevention. Clinical and genetic research is continuously on-going not only to identify those at risk, but to better define their level or risk still with limited success.

What would you do if

you had a second chance at life? Would you change anything? Would you make peace, forgive someone, make amends or celebrate life more? On a cold wintry January, Patrick W. Emmett was flying to Sioux Falls, South Dakota, on a business trip when he experienced a sudden cardiac arrest on an airplane at 30,000 feet and died. He experienced death and after some time, was rescued by passengers and airline crew while still in flight with the use of an automatic external defibrillator. You will be touched by his story and the stories of several other people who have suffered critical health issues. Pat's book is a reference book for heart patients, cancer

patients and those going through traumatic health conditions. His book recounts the events leading up to his sudden cardiac arrest, his rescue and what his experiences in death were. The book also recounts his recovery period and what steps other people can take to prevent a heart attack. Finally, understand how to cope with serious health conditions. Pat has had a career working for automobile manufacturers and has served as an automotive consultant to car dealers from coast to coast. He began writing after his sudden cardiac arrest and recovery and has published several short stories and books from fiction to non-fiction. He is also a frequent

public speaker for groups interested in hearing more about heart health and positive thinking.
