American health care has made great strides in the past hundred years. Life expectancy has increased dramatically and advances in medicine and treatments have eradicated many life-threatening diseases. However, in today's health care arena there is divergence between our health needs, the structure of our health care system, and how health care is delivered and funded. In *Forces of Change*, David A. Shore has collected the leading

thinking from experts in the field on how our health care system can benefit from important lessons from other industries and effect transformational change that truly serves all stakeholders well. Contributors include Max Caldwell of Towers Watson; Michael J. Dowling of North Shore Long Island Jewish Medical Health System; John P. Glaser of Siemens Healthcare; Ashish K. Jha of the Harvard School of Public Health; Eric D. The vast majority of international trade is supported by some form of trade financing: a specialized, sometimes complex form of financing that is poorly understood even by bankers and seasoned finance and treasury experts. Financing Trade and International Supply Chains takes the mystery out of trade and supply chain finance, providing a practical, straightforward overview of a discipline that is fundamental to the successful conduct of trade: trade that contributes to the creation of economic value, poverty reduction and international development, while increasing prosperity across the globe. The book suggests that every trade or supply chain finance solution, no matter how elaborate, addresses some combination of four elements: facilitation of secure and timely payment, effective mitigation of risk, provision of financing and liquidity, and facilitation of

transactional and financial information flow. The book includes observations on the effective use of traditional mechanisms such as Documentary Letters of Credit, as well as an overview of emerging supply chain finance solutions and programs, critical to the financing of strategic suppliers and other members of complex supply chain ecosystems. The important role of export credit agencies and international financial institutions is explored, and innovations such as the Bank Payment Obligation are addressed in detail. Financing Trade and International Supply Chains is a valuable resource for practitioners, business executives, entrepreneurs and others involved in international commerce and trade. This book balances concept with practical insight, and can help protect the financial interests of companies pursuing opportunity in international markets.

Infectious diseases as a specialty suffers from many unique challenges stemming from lower salaries compared to other medical specialties and difficulty keeping the younger demographic within the field. With emerging infections, new diagnostic and research tools, and changing

migration patterns, these problems are amplified; infectious disease specialists are in higher demand than ever with fewer and fewer specialists available to support patients and colleagues outside of the field. To meet these increasing challenges, it is vital for the workforce of the future to have the best training possible. This book aims to provide this support. As trainees, all physicians face clinical infectious disease scenarios on a daily basis. They receive basic training in common infections, giving them the tools needed for initial diagnostic studies and empiric treatment. This approach, however, still leaves them struggling with nuances of treating common infections, infections that masquerade as other diseases, rare infection, advanced diagnostics, complicating medical conditions, and a wide range of medical complexities. Important clinical microbiology details and host susceptibility risks will be highlighted when discussing uncommon infections. Each chapter begins by defining a distinct clinical infectious disease problem and the most common cause(s). The next section of each chapter identifies the key questions to consider, including other

possible pathogens, medical history, alternate microbiologic diagnoses, instances of unexpected result. This book is the only academic text designed specifically to meet this challenge by targeting learners at all levels. To do this, the text incorporate 30-40 common clinical infectious disease scenarios in both adult and pediatric hosts. It includes easy-to-access “tips and tricks” for when to look further or consider possibilities that are unusual that is useful for someone who is new to the information or has limited experience within infectious diseases. The text heavily features teaching and learning tools, including call out boxes that prioritizes infectious etiologies, host risk factors, important microbiologic clues, and important clinical history clues. The text also includes review questions and quiz-like challenges to reinforce the concepts. Written by experts in the field *Clinical Infectious Diseases* is the most cutting-edge academic resource for all medical students, fellows, residents, and trainees, including infectious disease specialists in both adult and pediatric care, internal medicine specialists, and hospitalists. This book discusses and provides insight on the legal and ethical dilemmas of managing those with Fetal Alcohol Spectrum Disorder (FASD). This book provides a clear perspective for those clinicians and legal professionals who are working with those with this disorder, and correspondingly increases their understanding when arranging effective supports for this population. Historically, the primary focus on FASD has been on children. However, this is a lifelong disorder and the implications of this disorder become even more prominent and complex in adulthood. Those with this condition can struggle with impulsiveness, and a host of cognitive difficulties. This correspondingly impacts their independence and employability, and produces an elevated risk for homelessness and other residential issues, involvement in substance use, being exploited, development of behavioural issues, and subsequent legal difficulties. Their cognitive difficulties result in challenges for legal systems around the world to understand their issues, and to design appropriate remedial strategies, recommendations for treatments and

supports, and even for understanding the failure of many of these individuals to be able to change their behaviours effectively. This produces various legal and ethical dilemmas, which are discussed in detail in this volume by 28 authors from Europe, New Zealand and North America. These include discussions regarding the rights of the unborn child, the alcohol industry's duty to warn, whether small amounts of alcohol during pregnancy can be condoned, and even the current use of involuntary hospitalization for addicted mothers. Other chapters discuss the need for training on FASD for front line officers, use of lies during interrogation of those with FASD, medical and legal interventions for offenders with FASD, access to diagnostic services and follow-up supports, and whether FASD can be considered a mitigating factor for sentencing. Furthermore, caregivers also provide their stories regarding the daily dilemmas that are faced in raising those with FASD.

The Mexican American woman zoot suiter, or pachuca, often wore a V-neck sweater or a long, broad-shouldered coat, a knee-length pleated skirt, fishnet stockings or bobby socks, platform heels or saddle shoes, dark lipstick, and a bouffant. Or she donned the same style of zoot suit that her male counterparts wore. With their striking attire, pachucos and pachucas represented a new generation of Mexican American youth, which arrived on the public scene in the 1940s. Yet while pachucos have often been the subject of literature, visual art, and scholarship, *The Woman in the Zoot Suit* is the first book focused on pachucas. Two events in wartime Los Angeles thrust young Mexican American zoot suiters into the media spotlight. In the Sleepy Lagoon incident, a man was murdered during a mass brawl in August 1942. Twenty-two young men, all but one of Mexican descent, were tried and convicted of the crime. In the Zoot Suit Riots of June 1943, white servicemen attacked young zoot suiters, particularly Mexican Americans, throughout Los Angeles. The Chicano movement of the 1960s–1980s cast these events as key

moments in the political awakening of Mexican Americans and pachucos as exemplars of Chicano identity, resistance, and style. While pachucas and other Mexican American women figured in the two incidents, they were barely acknowledged in later Chicano movement narratives. Catherine S. Ramírez draws on interviews she conducted with Mexican American women who came of age in Los Angeles in the late 1930s, 1940s, and 1950s as she recovers the neglected stories of pachucas. Investigating their relative absence in scholarly and artistic works, she argues that both wartime U.S. culture and the Chicano movement rejected pachucas because they threatened traditional gender roles. Ramírez reveals how pachucas challenged dominant notions of Mexican American and Chicano identity, how feminists have reinterpreted la pachuca, and how attention to an overlooked figure can disclose much about history making, nationalism, and resistant identities.

Filling a gap in the health policy literature,

author and dental public health specialist Dr. Carlos Quiñonez explores the complexities surrounding Canada's dental care system and policies, including how they came to be, their consequences, and what they mean for oral health and access to dental care. *The Politics of Dental Care in Canada* seeks to answer a long standing policy question in Canadian health care: Why is dental care excluded from Canada's national system of health insurance, Medicare? The text presents a history of dentistry in Canada from the late 19th century onward, outlining how dentistry traversed a developing Canadian welfare state. Dr. Quiñonez explores factors that led to dentistry's separation from larger movements in health care policy, including moral questions on individual versus social responsibility over health, scientific advances in the field, and prevailing economic uncertainty. Opening with a series introduction by Dr. Dennis Raphael, this vital text offers an extensive overview on how the politics of dental care contributes to inequalities and inequities in oral health. From discussing scientific and public health advances in dentistry to looking at the general nature of oral health

care in Canada from an international perspective, this text serves as an important addition to the field of health policy and a foundational resource for courses in dentistry, health studies, and comparative health policy. **FEATURES** - Comprehensively discusses the current state of Canadian dental care policy, the history and factors that led to the policy, and the resulting outcomes and inequalities - Presents the latest available information on the epidemiology of oral diseases and conditions; the connection between oral health and systemic health; and the organization, financing, and delivery of oral health care in Canada and internationally

Pediatric respiratory disorders are responsible for a number of acute and chronic health conditions and are a leading cause of pediatric emergency room visits and hospitalizations. More than ever, nurses and nurse practitioners must have an understanding of the anatomy, pathophysiology, diagnosis and state of the art treatments in pediatric respiratory disease as they are often the first to come in contact with and recognize respiratory problems in children. Nursing Care in Pediatric Respiratory Disease seeks to provide both nurses and nurse practitioners with this information in order to aid them in the diagnosis and treatment of children suffering from acute and chronic respiratory disorders. Nursing Care

in Pediatric Respiratory Disease opens with an overview of the anatomy and physiology of the respiratory system, best practices for assessing respiratory symptoms in children, and common respiratory therapies and treatment methods. It then proceeds through an examination of varying acute and chronic upper and lower respiratory diseases spanning from asthma and cystic fibrosis to vocal cord paralysis and sinusitis in both hospital and ambulatory settings. Nursing Care in Pediatric Respiratory Disease provides nurses and other health care providers with a comprehensive and practical resource which allows them to collaborate and advocate more effectively, as well as educate both the family and child in management of respiratory disorders.

NEW YORK TIMES BESTSELLER • The story of how the NFL, over a period of nearly two decades, denied and sought to cover up mounting evidence of the connection between football and brain damage “League of Denial may turn out to be the most influential sports-related book of our time.”—The Boston Globe “Professional football players do not sustain frequent repetitive blows to the brain on a regular basis.” So concluded the National Football League in a December 2005 scientific

paper on concussions in America's most popular sport. That judgment, implausible even to a casual fan, also contradicted the opinion of a growing cadre of neuroscientists who worked in vain to convince the NFL that it was facing a deadly new scourge: a chronic brain disease that was driving an alarming number of players—including some of the all-time greats—to madness. In *League of Denial*, award-winning ESPN investigative reporters Mark Fainaru-Wada and Steve Fainaru tell the story of a public health crisis that emerged from the playing fields of our twenty-first-century pastime. Everyone knows that football is violent and dangerous. But what the players who built the NFL into a \$10 billion industry didn't know—and what the league sought to shield from them—is that no amount of padding could protect the human brain from the force generated by modern football, that the very essence of the game could be exposing these players to brain damage. In a fast-paced narrative that moves between the NFL trenches, America's research labs, and the boardrooms where the NFL went to war against science, *League of Denial*

examines how the league used its power and resources to attack independent scientists and elevate its own flawed research—a campaign with echoes of Big Tobacco's fight to deny the connection between smoking and lung cancer. It chronicles the tragic fates of players like Hall of Fame Pittsburgh Steelers center Mike Webster, who was so disturbed at the time of his death he fantasized about shooting NFL executives, and former San Diego Chargers great Junior Seau, whose diseased brain became the target of an unseemly scientific battle between researchers and the NFL. Based on exclusive interviews, previously undisclosed documents, and private emails, this is the story of what the NFL knew and when it knew it—questions at the heart of a crisis that threatens football, from the highest levels all the way down to Pop Warner.

We all are indebted to nature for providing us food and its resources for our subsistence and survival. In the food

domain, cereal and legume grains occupy the front line, whereas, horticultural crops have occupied the second line of defense. For healthy diet cereals and legumes provide us with carbohydrates and protein, whereas, fruits and vegetables provide us minerals and vitamins. Both macro- and micro- nutrients are essential for human growth and development. The fruits and vegetables are the major source of micro-nutrients. It is estimated that up to 2.7

million lives could potentially be saved each year if fruit and vegetable production was sufficiently increased. Both at national and international levels, food and agriculture/horticulture development plans and estimates are basically developed, framed and implemented, and narrowed down to cereal production. In the present context of attaining nutrition security, this mode of thinking on 'food' needs to be

changed to 'nutrients', which will include necessarily all those crops including fruit and vegetables which provide all macro- and micro-nutrients to ensure balanced nutrition needed for good human health. The present publication has attempted to reflect and discuss the above views and ideas on the subject of sustainable horticulture development and nutrition security in nine chapters with 32 articles by 32 authors.
