Toward a Sustainable Future DIANE Publishing

A look at the human sense of time, a biological rhythm that may follow a different beat from that dictated by external, "official," "objective" timepieces. Time and Place—Timeplace—is a continuum of the mind, as fundamental as the spacetime that may be the ultimate reality of the material world. Kevin Lynch's book deals with this human sense of time, a biological rhythm that may follow a different beat from that dictated by external, "official," "objective" timepieces. The center of his interest is on how this innate sense affects the ways we view and change—or conserve, or destroy—our physical environment, especially in the cities.

Sustainability Assessment is an increasingly important tool for informing planning and development decisions across the globe. Required by law in some countries, strongly recommended in others, a comprehensive analysis of why Sustainability Assessment is needed and clarification of the value-laden and political nature of assessments is long overdue. Currently the writing on the subject is limited and comprises, for the most part, guidance documents and completed assessments. This book overcomes these shortcomings by simultaneously providing the knowledge, inspiration and range of assessment tools in decision-making students require to tackle Sustainability Assessment challenges nested within wide-ranging values and sustainability-grounded evidence. The collection details the current state-of-the-art in relation to Sustainability Assessment theory and practice, and considers the pluralistic nature of the tool and the implications for achieving sustainable decision-making. The contributors set out the context for Sustainability Assessment and then outline some contested issues which can affect interpretations of whether the decision tool has been effective. Current practice worldwide is assessed against a consistent framework and then solutions to some of the inherent weaknesses and causes of conflict in relation to the perceived sustainability of outcomes are put forward. The book is unique in setting out state-of-the-art in terms of Sustainability Assessment practice by focusing on those countries with developing experience. It also covers emerging factors influencing effectiveness of decision-making tools and evaluates how they affect the performance of Sustainability Assessment. Written by authors among the leading university academics teaching impact assessment courses in the most acclaimed universities worldwide operating in this field, it is ideally suited for the growing numbers of courses in impact

assessment education and training.

Standard Methods for the Examination of Water and Wastewater Prentice Hall

A study of the struggle for environmental justice, focusing on conflicts over solid waste and pollution in Chicago. In *Garbage Wars*, the sociologist David Pellow describes the politics of garbage in Chicago. He shows how garbage affects residents in vulnerable communities and poses health risks to those who dispose of it. He follows the trash, the pollution, the hazards, and the people who encountered them in the period 1880-2000. What unfolds is a tug of war among social movements, government, and industry over how we manage our waste, who benefits, and who pays the costs. Studies demonstrate that minority and low-income communities bear a disproportionate burden of environmental hazards. Pellow analyzes how and why environmental inequalities are created. He also explains how class and racial politics have influenced the waste industry throughout the history of Chicago and the United States. After examining the roles of social movements and workers in defining, resisting, and shaping garbage disposal in the United States, he concludes that some environmental groups and people of color have actually contributed to environmental inequality. By highlighting conflicts over waste dumping, incineration, landfills, and recycling, Pellow provides a historical view of the garbage industry throughout the life cycle of waste. Although his focus is on Chicago, he places the trends and conflicts in a broader context, describing how communities throughout the United States have resisted the waste industry's efforts to locate hazardous facilities

in their backyards. The book closes with suggestions for how communities can work more effectively for environmental justice and safe, sustainable waste management.

Newly Revised The Council of Christian Colleges and Universities Series Stressing the biblical message of stewardship, biologist Richard T. Wright celebrates the study of God's creation and examines the interaction of the life sciences with society in medicine, genetics, and the environment. The author brings a biblical perspective to theories on origins, contrasting creationism, intelligent design, and evolution. Highlighting the unique nature of biology and its interaction with Christian thought, Wright demonstrates that Christian stewardship can be the key to a sustainable future. This comprehensive work, one of a series cosponsored by the Council for Christian Colleges and Universities, addresses the needs of the Christian student of biology to align science and faith. It demonstrates that the study of biology penetrates to the core of human existence and has much to contribute to the construction of a consistent Christian worldview.

Broad perspective on collectivity in the life sciences, from microorganisms to human consensus, and the theoretical and empirical opportunities and challenges. Many researchers and scholars in the life sciences have become increasingly critical of the traditional methodological focus on the individual. This volume counters such methodological individualism by exploring recent and influential work in

the life sciences that utilizes notions of collectivity, sociality, rich interactions, and emergent phenomena as essential explanatory tools to handle numerous persistent scientific questions in the life sciences. The contributors consider case studies of collectivity that range from microorganisms to human consensus, discussing theoretical and empirical challenges and the innovative methods and solutions scientists have devised. The contributors offer historical, philosophical, and biological perspectives on collectivity, and describe collective phenomena seen in insects, the immune system, communication, and human collectivity, with examples ranging from cooperative transport in the longhorn crazy ant to the evolution of autobiographical memory. They examine ways of explaining collectivity, including case studies and modeling approaches, and explore collectivity's explanatory power. They present a comprehensive look at a specific case of collectivity: the Holobiont notion (the idea of a multi-species collective, a host and diverse microorganisms) and the hologenome theory (which posits that the holobiont and its hologenome are a unit of adaptation). The volume concludes with reflections on the work of the late physicist Eshel Ben-Jacob, pioneer in the study of collective phenomena in living systems. Contributors Oren Bader, John Beatty, Dinah R.
