The Global Accounting Experiment Edward Elgar Publishing
An important but usually overlooked variable that affects the process and product of accounting is culture. Consensus on what constitutes proper accounting methods and behavior varies among countries, and it is this cultural relativism and its impacts that Riahi-Belkaoui explores here. His purpose is to elaborate on the nature of cultural relativism in accounting and in the interpretation of accounting data. He thus shows the way culture determines accounting judgments, and explains the intercultural differences in the perception of accounting concepts, and in the field's self-regulation internationally. His point is that accounting is actually a cultural rather than a technical process, and that professionals as well as academics should be aware of this. A challenging, useful discussion for teachers, graduate students,

and accounting practitioners, particularly in international settings.

Ebook: International Accounting McGraw-Hill Europe

This book explores accounting for biological assets under IAS 41 – Agriculture, and explains the recent adjustments introduced by the IASB which allow firms to choose between cost or revaluation models concerning mature bearer plants. Identifying the firm and country-level drivers that inform the disclosure and measurement practices of biological assets, this concise guide examines the value relevance of measuring those assets at fair value. It also analyses how firm and country-level drivers explain the differences in the disclosure level and practices used to measure biological assets under IAS 41. Finally, it evaluates whether there is a difference in the relevance of biological assets among the listed firms with high and low disclosure levels on biological assets. Based on a major international study of a wide selection of firms and country-level drivers, this book is vital for standard setters, stakeholders, students, accountants and auditors who

need to understand disclosure and measurement practices of biological assets under IAS 41.

With the growing integration of the international economy, the need for established systems of classification in financial reporting becomes ever more important. Chris Nobes asks whether classification is possible, or even useful, and offers a critical analysis of the current attempts to discern an order in the variety of accounting practices. Revised and updated to reflect the post-IFRS era, this book will be of interest to academics, postgraduates and undergraduates in international accounting, accounting theory and to international accounting professionals. *International Accounting* Bloomsbury Publishing USA

Written by two experienced lecturers, this is the first student-centered textbook to bridge the technical and theoretical aspects

of management accounting change. Packed full of pedagogical features, including mini-cases, learning outcomes, key terms, article summaries, key concept boxes, real-world cases, chapter summaries and further reading suggestions and resources, it is clear and accessibly written, covering all the major emerging topics in management accounting theory. Discussing technical developments in management accounting from conventional cost accounting to contemporary strategic management accounting and beyond, in four parts it: shows how conventional cost accounting techniques and management control models evolved in line with the development of mass production and bureaucracy explores how recent developments such as customer and strategic orientations in business, flexible manufacturing, post-bureaucracy, network and virtual organizational technologies implicate in management accounting provides a number of alternative theories through which the transition of management accounting from mechanistic to post-mechanistic approaches can be explained – elaborating both rational and interpretive/critical theories. This excellent text meets a desperate need for an advanced management accounting textbook that incorporates theory and practice and is accessible and engaging for all those studying in this challenging area.

The Cultural Shaping of Accounting John Wiley & Sons

Globalization is a multi-dimensional concept reflecting the increased economic, social, cultural, and political integration of countries. There has been no pinpointed consensus on the history of globalization; however, the globalization process has gained significant speed as of the 1980s in combination with liberalization. Many countries have removed or loosened barriers over the international flows of goods, services, and production factors. In this context, both liberalization and globalization have led to considerable institutional, economic, social, cultural, and political changes in the world. The liberalization and globalization processes have affected economic units, institutions, cultures, social lives, and national and international politics. The Handbook of Research on Institutional, Economic, and Social Impacts of Globalization and Liberalization provides a comprehensive evaluation of the institutional, economic, and social impacts of globalization and liberalization processes across the world. While highlighting topics like economics, finance, business, and public administration, this book is ideally intended for government officials, policymakers, practitioners, stakeholders, researchers, and academicians interested in the international impacts of globalization and liberalization across a variety of different domains.
