More than 1.2 million households in South Africa live in informal settlements, without access to adequate shelter, services or secure tenure. There has been a gradual shift to upgrading these informal settlements in recent years, and there have been some innovative experiments. *Upgrading Informal Settlements in South Africa:* a partnership-based approach examines the successes and challenges of informal settlement upgrading initiatives in South Africa and contextualises these experiences within global debates about informal settlement upgrading and urban transformation. The book discusses:

- The South African informal settlement upgrading agenda from local, national

- and international perspectives
- South African 'city experiences' with informal housing and upgrading
- The role of partnerships, actors and capabilities in pursuing an incremental upgrading agenda
- Tools, instruments and methodologies for incremental upgrading
- Implications of the upgrading agenda for the transformation of cities

The book has been written and edited by a wide range of practitioners and researchers from government, NGOs, the private sector and academia. It covers theory and practice and represents a vast accumulated body of housing experience in South Africa.

In this study outsourcing is defined as the organizational practice of contracting for services from an external entity while retaining control over assets and oversight of the services being outsourced. In the 1980s, a number of factors led to a renewed interest in outsourcing. For private sector organizations, outsourcing was identified as a strategic component of business process reengineering-an effort to streamline an organization and increase its profitability. In the public sector, growing concern about the federal budget deficit, the continuing long-term fiscal crisis of some large cities, and other factors accelerated the use of privatization measures (including outsourcing for services) as a means of increasing the efficiency of government.

Public Budgeting in African Nations aims to provide usable budgeting and fiscal policy management information to development practitioners interested in improving the performance of governments in the context of good

governance. It shares regional and cross-cultural experiences with international audiences and gives reflective attention to comparative budgeting and fiscal policy management. With a promising economic and fiscal forecast, such information is timely for international development practitioners and for scholars and researchers interested in advancing development management. This book adopts an interdisciplinary/pragmatic approach to analyze and present research findings on public budgeting as a sustainable development tool. The central argument is that development practice will benefit from a bottom-up, decentralized approach to budgeting and fiscal policy management, involving national, sub-national, and civil society institutions. From this perspective, a balanced budget should draw from and reflect values and priorities across the full spectrum of social and political life.

This book successfully represents the indispensable interdisciplinarity of viewpoints by its authors combining legal perspectives with architectural and anthropological approaches. With the observation and analysis presented here, this book is the first to demonstrate research-based governance solutions for cultural heritage within the process of recovering from traumatic events. Its opening statement is that universal international standards are not effective enough for the specific situations of disaster-struck places. A major objective of this monograph is to allow its readers to go through a learning experience, from plural cases where reconstruction of cultural heritage became central to rebuilding a post-disaster society. This book introduces

Japan as the most disaster-prone country, with a long history of confronting and overcoming the power of nature, resulting in its unique solutions for cultural heritage resilience and sustainability. But how do leadership and decision making become efficient in times of recovery? Bearing in mind what may be lacking in Japanese practices, this work also presents comparable governance models from other countries which indicate alternative solutions. While a traumatic event may occur within one night, the process of recovery could last for decades. Such disasters also tend to recur. In order that directly affected communities can sustain resilience throughout the long recovery period, and that equally severe social trauma will not be repeated, a continuous, well-maintained governance response is required, whether grounded in local knowledge or national policy frameworks. At the heart of this book is the matter of the reconstruction process involving networks of small and large communities. Each of those has a role that becomes operational through linkages of contacts, the interchange of knowledge and skills, and above all through the sharing of common goals.
