Meant to aid State & local emergency managers in their efforts to develop & maintain a viable all-hazard emergency operations plan. This guide clarifies the preparedness, response, & short-term recovery planning elements that warrant inclusion in emergency operations plans. It offers the best judgment & recommendations on how to deal with the entire planning process -- from forming a planning team to writing the plan. Specific topics of discussion include: preliminary considerations, the planning process, emergency operations plan format, basic plan content, functional annex content, hazard-unique planning, & linking Federal & State operations.

From the Introduction This book is mostly structured around first-person interviews with nationally and locally recognized experts who have been in hazardous materials response for a number of years. To aid networking, the addresses and telephone numbers of all persons interviewed are listed at the end of each interview. The central narrative theme of the book has been to detail the actual methods, procedures, techniques, tactics, and "lessons learned" of specific hazardous materials response teams (HMRT) drawn from a number of different categories. The object is to have readers find a ready source to provide knowledge of what a teamed, trained, and equipped HMRT uses for methods, tactics, procedures, tools, vehicles, instruments, equipment, strategies, leak/fire/spill control, prevention, remedial actions, decision making, incidents, containment, or hazards. This book answers many questions for emergency responders that they may need to know to stay alive.

The terrorist attack of September 11, 2001, and the natural

disasters of Hurricanes Katrina and Rita demonstrated the challenges that governments face in initial response and recovery efforts. This book details the important steps that governors and mayors have initiated to address the serious problems illustrated by these recent disasters. The innovative solutions include developing more reliable communications, creating public-private partnerships to supplement public emergency services, establishing fusion centers that interpret information, and creating joint operations centers to manage the response to the event. There are important lessons to be learned from the managerial and technological innovations that the governors and mayors describe in this book. As the Mayor of Philadelphia and now as the Governor of Pennsylvania, I have contributed to three books on best practices of state and local governments. I am pleased to participate in the efforts of the Center for Competitive Government of the Fox School at Temple University to address the important issues faced by governments. This book makes an important contribution to the public discussion on the public and private sectors' role in homeland security. Commonwealth of Pennsylvania Governor Edward G. Rendell vii Acknowledgement The editors would like to acknowledge Dr. M. Moshe Porat, Dean of the Fox School at Temple where the Center for Competitive Government is located. His strong contribution and support for the Mayors' Summits is most appreciated. Many chapters for our books including this one emanated from these Summits.
